QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF

ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS
DISEASE IN CERTAIN LARGE TOWNS.

Published by Authority of the Registrar-General.

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 233.] **Marriages**—*October, November, December, 1906.*
Births and Deaths—*January, February, March, 1907.* [Price 9d.]

*General Register Office, Somerset House,
26th April, 1907.*

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1907 is estimated at 44,104,321 persons; that of England and Wales at 34,945,600, that of Scotland at 4,776,063, and that of Ireland at 4,382,658.

In the United Kingdom 287,808 *births* and 206,732 *deaths* were registered in the three months ended 31st March 1907. The natural increase of population was, therefore, 81,076. The number of *persons married* in the quarter ended 31st December 1906 was 175,920.

The birth-rate in the United Kingdom in the *first* quarter of 1907 was 26·5, and the death-rate 19·0, per 1000 of the estimated population. The marriage-rate in the *fourth* quarter of 1906 was 16·0 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to a Return issued by the Board of Trade it appears that during the three months ended 31st March 1907, the total passenger movement to and from places out of Europe showed a net balance outward of 81,579 passengers, or an increase of 12 per cent. compared with the number in the corresponding period of the previous year.

The outward balance among persons of British origin amounted to 49,585 persons. Of these 34,945 were English, 10,633 Scottish, and 4,007 Irish. There was also an outward balance of 32,347 persons of foreign origin, and an inward balance of 353 among persons whose nationality was not stated.

Compared with the numbers in the corresponding period of last year the net outward balance of English passengers showed an increase of 21 per cent., that of Scottish an increase of 43 per cent., and that of Irish an increase of 14 per cent., while that of foreign passengers showed an increase of only one per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,033 registration sub-districts of England and Wales in the three months ended 31st March 1907; and the MARRIAGES in 15,623 churches or chapels, in 14,669 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, in the three months ended 31st December 1906.

Marriages.

In the *fourth* quarter of 1906 the marriages of 148,188 persons were registered, being equal to an annual rate of 17·0 persons married per 1000 of the estimated population, against an average rate of 17·5 per 1000 in the fourth quarters of the ten years 1896-1905.

Among registration counties with populations exceeding 100,000 persons the lowest marriage-rates were 12·7 in Herefordshire, 13·4 in Shropshire, 14·2 in Surrey, 14·6 in Middlesex and in Hertfordshire, and 15·0 in Northamptonshire; the highest rates were 19·5 in Monmouthshire, 19·9 in Norfolk, 20·0 in Cambridgeshire and in Warwickshire, 20·2 in Nottinghamshire, and 21·4 in Carmarthenshire.

Births.

The births registered in the *first* quarter of 1907 numbered 230,124, and were in the proportion of 26·7 annually per 1000 of the population; this rate was 1·2 per 1000 below the rate recorded in the corresponding quarter of the year 1906, and was the lowest birth-rate recorded in any first quarter since civil registration was established. The mean rate in the ten preceding first quarters was 29·0. In registration counties with populations exceeding 100,000 persons the lowest birth-rates during the quarter were 20·0 in Sussex, 20·7 in Cornwall and in Carnarvonshire, 20·9 in Northamptonshire, 21·5 in Herefordshire, and 21·8 in Dorsetshire; the highest rates were 29·7 in Nottinghamshire, 30·3 in Northumberland, 30·5 in Staffordshire, 33·5 in Glamorganshire, 34·5 in Durham, and 35·3 in Monmouthshire.

In 76 great towns the birth-rate averaged 28·0 per 1000, ranging from 15·7 in Hornsey, 16·1 in Hastings, 17·1 in Bournemouth, 17·7 in Halifax, 20·4 in Northampton, and 20·5 in Bradford, to 35·1 in Sunderland and in Tynemouth, 36·2 in Warrington and in Middlesbrough, 37·7 in St. Helens, 38·0 in Merthyr Tydfil, and 39·0 in Rhondda. In 142 smaller towns the mean birth-rate was 26·0 per 1000, and in the remainder of England and Wales, excluding the 218 chief towns, it was 25·5.

Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths, was 69,419, against 87,166, 89,535, and 96,934 in the first quarters of 1904, 1905 and 1906 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 29s. 10d., 28s. 5d., and 26s. 3d. respectively in the preceding three quarters, was 26s. 5d. last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 4½d.; of prime beef, 7½d.; of inferior mutton, 7d.; of prime mutton, 9½d. Compared with the average prices in the preceding three months, the mean price of inferior beef showed an increase of ½d. while that of prime beef showed a decrease of ½d. The mean price of inferior mutton showed a fall of ½d., while that of prime mutton remained unchanged. The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 19s. 11d. per ton, against 15s. 8d. per ton in the first quarter of 1906. The mean price of Consols was 86l. 9s. 3d., having been 86l. 5s. 9d. in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had been raised on 19th October 1906 to 6l. was reduced on 17th January 1907 to 5l. The mean rate during the quarter was 5l. 3s. 7d.

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 805,842, exclusive of lunatics in asylums, of casual paupers, and of persons receiving medical relief only; of these 265,450 received in-door, and 540,392 out-door, relief. The proportion of the population in receipt of poor-law relief was 23·1 per 1000, against 24·0 and 23·6 per 1000 respectively in the first quarters of 1905 and of 1906.

Meteorology.

A detailed report on the weather over the United Kingdom in the past quarter, with a table of Monthly Results for a number of stations in England and Wales, prepared in the Meteorological Office, will be found on pp. 72-89.

The weather of the quarter was, upon the whole, very fine and dry, the deficiency of rainfall being especially marked over the southern portions of the country. Considerable fluctuations in temperature were observed, but the periods of warmth and of cold were so evenly balanced that the mean temperature of the quarter differed very little from the average. Gales were few in number, and, as a rule, of no great severity, the chief exception occurring on February 19th-20th when the whole kingdom was visited by a storm of considerable violence from the west and north-west. Snow was more frequent than in some recent years, and although the atmosphere in the first two months was unusually clear, a large amount of fog was experienced in March, chiefly during the night and early morning hours.

A deep cyclonic disturbance which advanced over western Europe from the Atlantic at the beginning of January was attended by stormy weather in all districts, the wind increasing to a gale from the south-westward and westward over Ireland and England, and from the eastward in the north of Scotland, with a general fall of rain or snow. After this an anticyclone spread up from the south-west, and for nearly three weeks fair dry weather

prevailed in all the more eastern, central, and southern parts of the kingdom, the general prevalence of westerly and south-westerly winds being accompanied by temperatures in excess of the average. In the west and north the conditions were influenced for a time by a series of barometrical depressions which traversed the upper parts of the Atlantic, but in the third week the anticyclone extended its influence, and rain was confined to the outlying regions of Ireland and Scotland. During a period of calm weather which prevailed between the 17th and 19th of January, a sharp frost was experienced, the thermometer in many parts of the country falling to between 22° and 25° . After this an anticyclone of phenomenal intensity began to form over northern Europe, while a decrease of pressure took place over the south-western countries. As a result of these changes a bleak easterly wind set in over England, and the thermometer fell to a very low level, many places recording a temperature between the 24th and 27th as low as 10° , and Llangammarch Wells, in central Wales, a reading of 5° . In the closing days of January the weather was affected by a large and complex cyclonic area which travelled south-eastward from Iceland to the Baltic, its passage being attended by gales and strong winds from the westward or north-westward, with cold inclement weather, and frequent showers of snow or sleet. Thunder and lightning were observed at several southern stations on January 2nd and 3rd, and at a few places in the north-west on the 28th or 29th.

February opened with a spell of light winds and fair, cold weather, hard frost being experienced in nearly all districts during the first three days of the month. After the 6th a large barometrical depression spread over these islands from the Iceland-Faeröe region, and moderate southerly to south-westerly winds set in, with occasional falls of rain or snow, but with a temperature in fair agreement with the normal. A small cyclonic system which passed eastwards across our southern districts on the 12th was accompanied by heavy rain in many parts of England, and by a strong gale from between south-west and north-west on our south and south-west coasts. After the 15th, the weather fell into a very stormy condition generally, the heaviest gale being experienced on the 19th and 20th, when a cyclonic system of great intensity covered the whole of Europe and the neighbouring parts of the Atlantic. On the former day the gale blew from the south-westward, and considerable falls of rain were reported in most districts, while on the 20th, when the wind veered to the north-westward, the precipitation assumed the form of snow or sleet. After the 22nd, an anticyclone spread in from the Atlantic, and for the remainder of the month the weather was fair, dry, and quiet, with a sharp frost on the 23rd or 24th in nearly all parts of the country.

The improved conditions noticed at the end of February continued throughout the early days of March, but after the 4th a large area of low pressure began to spread down from the northward, so that the weather fell into a very changeable condition, the wind being mainly from some westerly quarter, and temperature a trifle below the average, with sharp frosts in most districts between the 5th and 7th. Towards the middle of the month the westerly wind increased to a gale, with frequent rain in the western and northern parts of the kingdom, and with occasional falls in other districts. In the east and south the showers were interspersed with long intervals of fine, sunny weather. After the 22nd the conditions were mainly anticyclonic, and the weather was everywhere fine and dry. In all inland districts the clearness of the atmosphere resulted in warm days, but in cold nights, with sharp ground frosts. On the coast, where the influence of the sun's heat was tempered by cool sea breezes, the day temperatures were much lower and the nightly minima considerably higher than at places situated only a mile or so from the sea. Throughout the whole of March

there was a decided tendency for the formation of fog; and although the visitation was confined, as a rule, to the night or early morning hours, there were in London and some of the larger towns several occasions on which it extended throughout a considerable portion of the day.

For the quarter as a whole the *mean temperature* differed but little from the average, a slight excess of warmth being reported in London, in England central and in England north-east, but a slight deficiency in most other districts. In England north-west the mean value was in exact agreement with the normal. The highest temperatures occurred between March 28th and 31st, when the thermometer in the shade rose above 65° in nearly all parts of the country, and touched 70° in the London, the southern, and the eastern districts. The lowest temperatures occurred as a rule on January 25th, but in London (at Barnet) on January 27th, and in England south on February 7th. In the closing week of January and the opening week of February the thermometer fell below 20° over a large portion of the kingdom, the lowest values reported over England and Wales being 5° at Llangammarch Wells, 9° at Buxton, and 10° at Hillington.

The *rainfall* of the quarter was very deficient. In London the total amount, 3·0 ins., did not exceed 60 per cent. of the average, while in some other districts the proportion was even smaller. In England south-west, for example, only 56 per cent. of the normal amount was collected, and in the English Channel district only 49 per cent., while in England south the percentage value was as low as 43. In the northern and eastern parts of the country the deficiency was not so large, the nearest accordance with the average being in England north-west, where the proportion amounted to nearly 90 per cent. In so dry a season heavy individual falls of rain were naturally very rare. On January 1st Llangammarch Wells reported as much as 1·09 in., and on March 9th Stonyhurst reported 1·14 in., while on March 19th Buxton registered as much as 1·25 in. In London and in England east and the Channel district the heaviest daily fall in the quarter amounted to little more than half an inch.

The duration of *bright sunshine* in London amounted to 276 hours, or to 31 per cent. of the possible amount, the aggregate being as many as 100 hours in excess of the average. An abundance of sunshine was reported also in most other parts of the country, England south-west and the English Channel being the only districts in which the excess failed to reach 100 hours. Over England as a whole the mean daily duration was therefore considerably more than an hour in excess of the normal. At no time during the quarter did the weekly total of sunshine fall much below the average. In the sunny anti-cyclonic week at the end of March between 80 and 85 per cent. of the possible duration was recorded in many parts of England, and as much as 87 per cent. at some of the south coast stations.

Deaths.

The deaths registered in England and Wales last quarter numbered 160,705, and were in the proportion of 18·7 annually per 1000 persons living; this rate was 2·2 per 1000 above the rate recorded in the corresponding quarter of the year 1906, and was 0·2 per 1000 above the average rate in the first quarter of the ten years 1897-1906. In registration counties with populations exceeding 100,000 persons, the death-rates ranged from 15·7 in Middlesex, 16·1 in Buckinghamshire, 16·2 in Northamptonshire, 16·3 in Essex, 17·0 in Kent, and 17·2 in Derbyshire, to 20·3 in the East Riding of Yorkshire, 20·6 in Devonshire, 20·8 in Nottinghamshire, 21·2 in Cumberland, 22·4 in the North Riding of Yorkshire, and 22·9 in Monmouthshire.

The 160,705 registered deaths included 81,174 of males and 79,531 of females, the death-rate among males being 19·5, and that among females 17·9, per 1000 of the estimated populations of the respective sexes. The male death-rate was equal to the average for the ten preceding first quarters, while the female rate showed an increase of 0·3 per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 109 is to 100; the mean proportion in the first quarters of the ten preceding years having been 111 to 100.

*Urban and Rural Mortality.**

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1907 is estimated at more than sixteen millions, the death-rate was 19·0 per 1000 living, or 0·3 above the death-rate of the whole country. The rates in the several towns ranged from 10·9 in Hornsey, 12·3 in Handsworth (Staffs.), 12·5 in Kings Norton, and 14·9 in Leyton, to 23·0 in Hanley, 23·2 in Oldham and in Preston, 23·7 in Swansea, and 27·1 in Middlesbrough.

In 142 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at nearly five millions, the death-rate was 18·2 per 1000 living, or 0·8 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with an aggregate population estimated at about fourteen millions, of whom more than six and a quarter millions live in small towns, and more than seven and a half millions in rural districts, the death-rate was 18·4.

Mortality at Different Ages.

Of the 160,705 deaths registered last quarter, 31,001 were those of infants under one year of age, 68,970 those of persons aged between one year and sixty years, and 60,734 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 135 per 1000, the average in the ten preceding first quarters having been 138. Among registration counties with populations exceeding 100,000 persons, the lowest proportions were 94 in Dorsetshire, 107 in Hampshire, 108 in Oxfordshire and in Herefordshire, 111 in Denbighshire, and 114 in Buckinghamshire. The highest proportions were 159 in Bedfordshire, 162 in Leicestershire, 166 in Glamorganshire, 167 in Cumberland, 174 in Monmouthshire, and 182 in Nottinghamshire.

In the 76 great towns infantile mortality averaged 136 per 1000 births, being 1 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 85 in Hornsey, 92 in Wallasey, 94 in Coventry, and 101 in Huddersfield and in York; the highest were 176 in Middlesbrough and in Merthyr Tydfil, 180 in Rotherham, 184 in Rhondda, 193 in Preston, and 207 in Nottingham. Among the 142 smaller towns infantile mortality averaged 148 per 1000 births, ranging from 47 in Gosport and Alverstoke, 55 in Hereford, 78 in Beckenham and in Salisbury, 79 in Harrogate, 83 in Poole, and 84 in Southport and in Stretford, to 226 in Chesterfield, 227 in Coseley, 230 in Maidstone, 243 in Dewsbury, 244 in Taunton, 247 in Mountain Ash, 265 in Tunstall, and 267 in Stalybridge. Excluding these 218 towns, infantile mortality in the remainder of England and Wales was in the proportion of 129 per 1000 births.

* It should be stated that the death-rates in these Urban and Rural areas have not been corrected for differences in the sex and age constitution of the respective populations; also that owing to the difficulty of allocating to their proper areas deaths occurring in Institutions, the death-rate in the Rural area may possibly be slightly overstated.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 8·9 per 1000 of the estimated population at this group of ages, being 0·3 below the mean rate in the ten preceding first quarters. In the 76 great towns the mean mortality at this age-group was 9·8 per 1000, ranging from 4·8 in Handsworth (Staffs.), 5·4 in Hornsey, 5·8 in Kings Norton, 5·9 in Great Yarmouth, 6·6 in Burton on Trent, and 7·0 in Reading, to 12·5 in Warrington, 12·7 in Newport (Mon.) and in Swansea, 12·9 in Oldham, 14·7 in St. Helens, and 15·8 in Middlesbrough. In the 142 smaller towns the mortality at this age-group averaged 8·6 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 95·2 per 1000 of the estimated population at this group of ages; the mean rate in the ten preceding first quarters having been 85·0. In the 76 great towns the mean mortality at this age-group was 100·6 per 1000, the lowest rates being 64·6 in Leyton and in Kings Norton, 71·0 in Great Yarmouth, and 74·0 in Hornsey; and the highest, 121·6 in Oldham, 123·8 in Stockton on Tees, 127·9 in Middlesbrough and in South Shields, and 128·0 in Preston. In the 142 smaller towns the rate averaged 98·0 per 1000.

Compared with the mean rates in the ten preceding first quarters, the mortality of infants under one year of age showed a decrease of 2·2 per cent., and that of persons between one year and sixty years of age a decrease of 3·3 per cent., while that of persons aged sixty years and upwards showed an increase of no less than 12·0 per cent.

Mortality from certain Epidemic Diseases.

The 160,705 deaths from all causes include—

3,351	that were attributed to measles,
2,775	" " whooping-cough,
1,834	" " diphtheria,
1,020	" " diarrhœa,
790	" " scarlet fever,
621	" " "fever,"
4	" " small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 10,395 deaths were referred last quarter, being in the proportion of 1·20 per 1000 of the estimated population, or 0·21 per 1000 below the average proportion in the corresponding quarters of the previous ten years.

The rate of mortality from measles last quarter exceeded the decennial average, whilst the rates from each of the other diseases were below the respective averages.

Measles was returned as the cause of death in 3,351 instances, corresponding to an annual rate of 0·39 per 1000 of the population, or 0·04 per 1000 above the average rate in the first quarters of the preceding ten years. Of the 55 registration counties, 10 were free from measles fatality throughout the quarter; the counties with populations of more than 100,000 persons showing the highest death-rates from this disease were 0·58 in Essex, 0·59 in Nottinghamshire, 0·66 in Lancashire, 0·68 in Warwickshire, 0·69 in Cumberland, and 1·03 in the East Riding of Yorkshire, per 1000 of the respective populations. In the 76 great towns measles caused an average mortality of 0·50 per 1000. In 14 of these towns no deaths from this disease were registered during the quarter. The highest death-rates were 1·68 in East

Ham, 1·86 in Birkenhead, 2·23 in Warrington, 2·33 in Grimsby, 2·96 in West Bromwich, and 4·51 in St. Helens. In the 142 smaller towns, measles was fatal on the average to 0·49 annually per 1000 persons living, and among these towns showed exceptional fatality in Salybridge, Hindley, Lancaster, Barnsley, Radcliffe, and Chorley. In the remainder of England and Wales the average measles death-rate was 0·22 per 1000 of the population. Among registration sub-districts outside the 218 chief towns, measles was especially fatal in Tetbury, Pocklington, East Flegg (in that part of the sub-district outside the Borough of Great Yarmouth), and Hemsworth Western.

Whooping-cough accounted, last quarter, for 2,775 deaths, and for a death-rate equal to 0·32 per 1000 annually, which is lower by 0·06 per 1000 than the average rate in the ten previous corresponding quarters. In seven of the counties of England and Wales no deaths were registered from this disease; among counties with populations exceeding 100,000 persons, the death-rate rose to 0·50 in Essex, 0·51 in the North Riding of Yorkshire, 0·52 in Middlesex, 0·60 in Bedfordshire, and 0·67 in Nottinghamshire. In the 76 great towns, whooping-cough caused an average death-rate of 0·39 per 1000 living. Six of these towns entirely escaped mortality from this disease throughout the quarter, but the death-rate was equal to 0·91 in Swansea, 0·95 in Tottenham, 0·99 in Leyton, 1·29 in Willesden, 1·34 in Middlesbrough, and 1·36 in Walthamstow. In the 142 smaller towns, the average death-rate from whooping-cough was 0·34 per 1000, the disease being especially fatal in Taunton, Tunstall, Lancaster, Tunbridge Wells, and Longton. In the remainder of England and Wales, whooping-cough caused an average mortality equal to 0·24 per 1000 annually. Among registration sub-districts outside the 218 chief towns, whooping-cough was exceptionally fatal in Milford (Pembroke), Bala, and Harptree.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,834 deaths, a number equal to an annual rate of 0·21 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·05 per 1000. Three of the counties were entirely free from fatal diphtheria throughout the quarter. Among counties with populations exceeding 100,000 persons the highest death-rates from this disease were 0·31 in Monmouthshire, 0·33 in Derbyshire and in Durham, 0·34 in the North Riding of Yorkshire, 0·39 in Denbighshire, and 0·51 in Carmarthenshire. The average death-rate from diphtheria in the 76 great towns was equal to 0·23 per 1000 of their aggregate population. No death from this disease occurred in Hastings or in Burton on Trent in the course of the quarter, and only one apiece in Northampton, Walsall, York, and Tynemouth. The great towns in which diphtheria showed the highest fatality were the following:—0·50 in Reading, 0·51 in Halifax, 0·54 in Walthamstow, 0·56 in Leyton, 0·57 in Croydon, and 0·83 in Derby. In the 142 smaller towns the mortality from this disease averaged 0·18 per 1000, the rate being highest in Middleton, Reigate, Fenton, Colne, Brighouse, and Poole. In the remainder of England and Wales, diphtheria was fatal in the average proportion of 0·21 per 1000 living. Among registration sub-districts outside the 218 chief towns, diphtheria was especially fatal in Llangendeirne, Yeovil, Llanrwst, and Loddon.

Diarrhœa was the assigned cause of 1,020 deaths last quarter, equal to an annual mortality of 0·12 per 1000, or 0·03 per 1000 below the decennial average rate for the first quarters of the ten years 1897–1906. In four counties no deaths from diarrhœa were returned last quarter. Among counties with populations exceeding 100,000 persons the highest rates from this disease were 0·16 in Lincolnshire and in Lancashire, 0·18 in Bedfordshire, in Glamorganshire, and in Denbighshire, and 0·30 in the North Riding of Yorkshire. In the 76 great towns the average death-rate from diarrhœa was 0·14

per 1000; no deaths were returned in seven of these towns; the rate was highest in the following towns:—Bury 0·27 per 1000, Merthyr Tydfil 0·32, Rhondda 0·34, Burnley 0·35, Oldham 0·42, and Middlesbrough 0·75. In the 142 smaller towns diarrhoea was fatal on the average to 0·11 per 1000 of the population, and caused the highest mortality in Barnsley, Colne, and Accrington. In the remainder of England and Wales the death-rate from diarrhoea averaged 0·10 per 1000.

Scarlet fever accounted last quarter for the deaths of 790 persons, and for a death-rate of 0·09 per 1000 living, or 0·04 per 1000 less than the decennial average rate for the first quarter. Fifteen of the counties of England and Wales were free from scarlet fever mortality. Among counties with populations exceeding 100,000 persons, the highest rates were 0·14 in Staffordshire, in Leicestershire, and in Lancashire, 0·15 in Essex, and 0·18 in Monmouthshire. In the 76 great towns scarlet fever accounted for an average mortality equal to 0·12 per 1000 annually. No deaths from this disease were recorded in sixteen of these towns. The highest scarlet fever death-rates were 0·36 per 1000 in Leyton, 0·41 in Sheffield, 0·53 in Newport (Mon.), and 0·66 in Hanley. In the 142 smaller towns scarlet fever was fatal in the average proportion of 0·09 per 1000 living, and caused the highest mortality in Glossop, Oldbury, Ilkeston, and Leigh (Lancs.). In the remainder of England and Wales this disease caused an average death-rate equal to 0·06 per 1000 living.

“*Fever*” (including the three chief forms—*typhus*, *enteric fever*, and “*pyrexia*” of uncertain origin) was the registered cause of 621 deaths last quarter, equal to an annual death-rate of 0·07 per 1000 of the population, or 0·05 per 1000 less than the average rate in the first quarters of the previous ten years. In nine counties no deaths from fever were returned last quarter; among counties with populations exceeding 100,000 persons, the highest county fever death-rates were 0·13 in Nottinghamshire, 0·14 in Warwickshire, 0·17 in the North Riding of Yorkshire, and 0·26 in Monmouthshire. In the 76 great towns fever caused an average mortality equal to 0·08 per 1000 annually. In ten of these great towns no deaths from fever occurred; the towns with the highest fever death-rates were Grimsby, Wigan, and Stockton on Tees, in all of which the rate was equal to 0·23 per 1000, Walsall 0·25, Huddersfield 0·30, and Middlesbrough 0·32. In the 142 smaller towns fever caused an average mortality equal to 0·08 per 1000 annually, the mortality being highest in Workington, Gorton and Darlington. In the remainder of England and Wales, the death-rate from fever averaged 0·06 per 1000. Among registration districts and sub-districts outside the 218 chief towns, fever was especially fatal in Foleshill.

Small-pox was fatal to 4 persons last quarter, as compared with 3, 1, 5, and 12 in the four quarters immediately preceding. These 4 deaths belonged respectively to Southampton, Bristol, Hull, and Cardiff.

Violent Deaths.

The deaths in England and Wales that were referred to different forms of violence, either accidental or otherwise, numbered 5,155 last quarter, and corresponded to an annual rate of 0·60 per 1000 of the population, against an average of 0·62 in the ten preceding first quarters. In registration counties with populations exceeding 100,000 persons, the lowest death-rates from violence were 0·11 in Herefordshire, 0·33 in Denbighshire, 0·38 in Berkshire and in Norfolk, 0·39 in Northamptonshire, and 0·40 in Kent and in Hertfordshire; the highest rates were 0·72 in Buckinghamshire, 0·74 in the East Riding of Yorkshire, 0·76 in Warwickshire, 0·80 in Monmouthshire, 0·83 in Glamorganshire, and 1·05 in Carmarthenshire. In the 76 great towns the

mean rate was 0·63 per 1000 living; among the several towns the rate was only 0·12 in Handsworth (Staffs.), 0·18 in Hastings, and 0·30 in Smethwick; but it rose to 0·96 in Burnley and in West Hartlepool, 1·00 in Merthyr Tydfil, 1·01 in Newport (Mon.), and 1·04 in West Bromwich.

Certification of Causes of Death.

Of the 160,705 deaths registered in England and Wales last quarter, the causes of 147,858, or 92·0 per cent., were certified by registered medical practitioners, and the causes of 10,375, or 6·5 per cent., by coroners after inquest; whilst the causes of the remaining 2,472, or 1·5 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding first quarters having been 1·9 per cent. Among registration counties with populations exceeding 100,000 persons the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Middlesex, Wiltshire, Cornwall, Somersetshire, Gloucestershire, the East Riding of Yorkshire, and Glamorganshire, but it reached 2·9 in Shropshire and in Derbyshire, 3·0 in Cumberland, 3·7 in Durham, and 3·9 in Herefordshire. In the 76 great towns the mean proportion of uncertified deaths was 1·0 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, West Ham, Walthamstow, Hastings, Brighton, Bournemouth, Southampton, Ipswich, Great Yarmouth, Devonport, Derby, Stockport, Wigan, York or Cardiff, the proportion per cent. rose to 3·8 in St. Helens and in Preston, 4·1 in Birmingham, 4·5 in Warrington, and 5·4 in South Shields and in Gateshead.

Inquests.

Inquests were held in England and Wales concerning 10,375, or 6·5 per cent., of the total deaths, the mean proportion in the ten preceding first quarters having been 6·4 per cent. In the 76 great towns the proportion of inquest cases was 7·7 per cent., ranging from 3·0 in Reading, 3·4 in Gateshead, 3·5 in Handsworth (Staffs.) and in Rochdale, to 9·9 in Derby, 10·0 in Southampton, 10·7 in Plymouth, 11·0 in Grimsby and 11·8 in Tottenham.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 28,748, or 17·9 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding first quarters having been 15·6 per cent. In the 76 great towns the deaths in public institutions averaged 24·0 per cent. of the total deaths, the lowest percentages in the several towns being 2·2 in Rhondda, 9·8 in Smethwick, 10·2 in Kings Norton and in Merthyr Tydfil, 11·0 in West Hartlepool, and 11·1 in Rotherham and in Gateshead; the highest percentages being 26·1 in Manchester, 27·0 in Brighton, 29·2 in West Ham, 34·1 in Liverpool, and 35·3 in London.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual birth and death-rates per 1000 living in these towns last quarter were as follows :—

[illegible]

COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 25 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the past quarter (Table XIII.). Excluding the Indian cities, the highest and lowest annual birth- and death-rates during the first quarter of 1907 were as follows:—

BIRTH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Trieste	34·8	Brussels	18·8
Bucharest	31·7	Paris	20·1
Breslau	30·1	Prague	22·9
Budapest	29·0	Berlin	24·1
Copenhagen	29·0	Vienna	24·4
Munich	28·6	Antwerp	24·7
		Venice	24·7
	London ...	26·7	

DEATH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Trieste	34·1	Christiania	16·0
Moscow	30·0	Stockholm	16·0
St. Petersburg	28·6	Antwerp	16·3
Bucharest	26·1	Berlin	16·4
Venice	26·1	Amsterdam	16·9
Breslau	24·0	Hamburg	17·1
	London ...	18·5	

Small-pox caused 18 deaths in Moscow, 7 in St. Petersburg, 5 in New Orleans, 4 in Paris, 1 in New York, and 1 in Chicago.

Measles was most fatal in proportion to population in St. Petersburg, Moscow, Trieste, Munich, and Christiania; *scarlet fever* in St. Petersburg, Chicago, Moscow, and Budapest; *diphtheria* in Christiania, St. Petersburg, New York, Moscow, Chicago, and Munich; *whooping-cough* in Trieste, Copenhagen, Amsterdam, and Antwerp; "*fever*" in St. Petersburg, New Orleans, Moscow, Antwerp, and Chicago; and *diarrhæal diseases* in St. Petersburg, Moscow, Breslau, and Munich.

Infantile Mortality.—Among those cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 90 in Christiania, 93 in Amsterdam, 97 in Paris, and 103 in Stockholm, to 173 in Munich, 177 in Bucharest, 180 in Vienna, 189 in Prague, 195 in Breslau, 199 in Venice, and 225 in Trieste.

INDIAN CITIES.—The death-rate was equal to 36·4 per 1000 in Calcutta, 49·3 in Bombay, and 36·3 in Madras. *Small-pox* caused 634 deaths in Calcutta, 26 in Bombay, and 11 in Madras; *measles* caused 38 deaths in Madras, 25 in Calcutta, and 21 in Bombay. Under the heading "*fever*" 4,514 deaths were classed in Bombay, 2,238 in Calcutta, and 1,300 in Madras, including 3,395 deaths in Bombay, and 603 in Calcutta from *plague*. The mortality from *diarrhæal diseases* was excessive in all of these Indian cities; *Asiatic cholera* caused 1,596 deaths in Calcutta, 23 in Bombay, and 50 in Madras.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the first quarter of the year 1907 (*see* pages xxvii—xxxii); and in the two following Tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxiii—xxxviii).

TABLE V.—76 Great Towns.—Population : Births, Deaths, and Meteorology in the 13 Weeks ended 30th March, 1907.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners connected with Metropolitan Public Institutions situated outside the County. (See Table XII.). The deaths in the other towns have been corrected, as far as possible, for deaths occurring in Public Institutions ; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The death-rate in London has been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The death-rates in all other towns have been corrected for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong. Of the deaths excluded from London previous to 1900, only those which occurred in the London Fever Hospital, the Metropolitan Asylums Hospitals, and the Middlesex County Lunatic Asylum were added to the several parts of the Outer Ring.

TABLE VII.—One hundred and forty-two smaller Towns.—Population; Births and Deaths in the QUARTER ended 31st March, 1907.

NOTE.—The 142 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 at the Census of 1901. The deaths in these towns have been corrected for deaths occurring in Public Institutions, while in addition the deaths occurring in London of all persons known to belong to towns in the Metropolitan Outer Ring have been credited to the several towns to which they belong.

The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purpose connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

^a See page 2, note b.

^b For London, the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrar.

II.—SOUTH EASTERN COUNTIES.—REGISTRATION DISTRICTS.

* The Registration Sub-districts (2033 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; w indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; F a Hospital for Infectious Diseases; H another Hospital; and L a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

b See page 2, note b.

* 77: 1, 2.—On the 1st March, 1907, the boundary between these sub-districts was altered. See page 70. The births and deaths are shown as if the change had taken place at the beginning of the quarter.

* 78: 3.—The 5 deaths from whooping-cough were registered in March, and included 3 in the parish of Sompting; 2 more deaths from whooping-cough in this parish were registered between the 1st and 19th April.

* 79: 2.—The 3 deaths from scarlet fever occurred in Horsham Urban District.

* 79: 3.—The 4 deaths from whooping-cough belonged to the parish of Billingshurst.

* 90: 1.—The 4 deaths from measles belonged to Fareham Urban District.

* 90: 2.—The 3 deaths from measles belonged to the parish of Titchfield.

* 91: 3.—Four of the 5 deaths from diphtheria belonged to the Borough of Ryde, and were all among children at one school.

* 327 : 1, 2, 3.—On 1st January, 1907, Barnwood (1), St. Nicholas (2), St. John the Baptist (3), and South Hamlet (4) sub-districts were abolished and their constituent parts formed into three new sub-districts, viz.:—Barnwood (1), Gloucester northern (2), and Gloucester Southern (3). See pages 70 and 71.

330 : 2.—The 7 deaths from measles were registered in January, and included 5 in Tetbury Urban District, and 2 in parish of Tetbury Upton.

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING THE
QUARTER ENDED MARCH 31ST, 1907.

EXTRACTED FROM THE
MONTHLY WEATHER REPORTS
OF THE
METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 170 STATIONS,
TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 58 STATIONS
IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

JANUARY, 1907.

General Summary.—The severe cold and the snowstorms which marked the closing week of 1906 were succeeded by an abrupt and decided change in the character of the weather with the opening of the New Year. A very deep cyclonic system passed round the north of Scotland between January 1st and 3rd, occasioning a strong North-Westerly gale at Holyhead, a whole gale from West on the south-west coasts of England, and a storm from East and North-East in Shetland. After this, for about three weeks, the relative distribution of pressure underwent but little modification. An area of high barometer readings occupied the Bay of Biscay and France, while disturbances were continually passing eastward in the neighbourhood of the Arctic Circle. As a result the country enjoyed a fairly steady type of mild, open weather, which was generally dry (an absolute drought of from 15 to 24 days locally), with many bright periods. The mildness was due largely to the nights being relatively warm; minimum temperatures as high as 40° to 45° occurred even in the extreme north, and the frosts experienced were unimportant. On the 22nd a great alteration took place in the disposition of pressure. An anticyclone of exceptional intensity, 31 ins. to 31·5 ins., appeared over north-eastern Europe and spread westward across our northern districts, and a low pressure area simultaneously advanced from the Atlantic and slowly crossed southern Spain. Easterly winds, varying in strength from a light breeze to a fresh gale, were consequently set up over our southern and eastern districts, and as they were drawn from the Continental regions of severe frost, the weather in most parts of the kingdom became bitterly cold. The lowest temperatures were found chiefly in the south, comparative mildness ruling in the extreme north-west and north. Snow fell in many localities, but the amounts were not large. From the 27th to the end the conditions were under the influence of a deep disturbance which followed a south-easterly course from Iceland to the Baltic, causing fresh or strong Westerly to Northerly gales in many places, a storm at Malin Head, with further falls of cold rain or snow, but no very low temperatures. Thunderstorms occurred at some southern stations on the 3rd, and in many northern districts on the 28th and 29th. Parhelia were observed in many parts of England on the 4th. For the month as a whole pressure was considerably higher than usual; temperature was a little variable, in excess in some districts, in defect in others: the winds were mainly from Westerly directions; precipitation was nearly everywhere in defect; and bright sunshine was in excess over Great Britain, in defect over Ireland. Earthquake shocks occurred on the 3rd in the vicinity of Llandale; on the 16th at Oundle; on the 17th between Oban and Fort William; and the newspapers reported shocks at Newport, Mon., on the 2nd.

Pressure.—*Mean at 8 a.m.* ranged from 30·38 ins. at Jersey, and above 30·2 ins. over nearly the whole of England and Ireland to below 30 ins. in the extreme north of Scotland, 29·92 ins. at Sumburgh Head. The values were in all cases considerably above the average, by 0·23 in. at Sumburgh Head, and as much as 0·43 in. at Valencia. The distribution of mean pressure was of a more Westerly type than the normal, and the gradient was somewhat steeper. *Highest* readings occurred nearly everywhere on the morning of the 23rd, exceeding 30·8 ins. except along the English Channel, reaching 31 ins. and upwards in the north of England and of Ireland and in many parts of Scotland, 31·06 ins. at Aberdeen. On the English Channel the maximum values were registered on the 11th, 30·77 ins. at Scilly. *Lowest* readings were recorded generally on the 2nd, below 29 ins. over the northern half of the kingdom, 28·34 ins. at Sumburgh Head, where also the same value was reported on the 28th. *Range* was consequently large, amounting to 2·6 ins. at Wick and Sumburgh Head, and exceeding 2 ins. over all northern districts, diminishing to 1·3 in. at Jersey.

Depressions.—For the midwinter month the disturbances which visited our shores were few in number, the great majority keeping on an easterly course beyond the Arctic Circle. A deep one moved round the north of Scotland on the 1st and 2nd, and passed on to Denmark and Russia. Those which crossed our western districts from the north of Ireland to the English Channel in the nights of the 21st and 26th were high barometer depressions, above 30·2 ins. in the former, and 30·4 ins. in the latter. They were accompanied by rain, sleet or snow, but not much wind. Two disturbances which were shown over Iceland on the morning and the evening respectively of the 27th, passed to southern Norway and occasioned boisterous weather over the northern half of these islands.

Anticyclones.—High pressure systems ruled during nearly the whole month. From the 3rd to the 21st the central space of one made slight changes in its position about the Bay of Biscay, our southern districts, and the more western portion of the Continent. On the 19th the maximum pressure was transferred to northern Russia, and until the 26th this remarkable anticyclone occupied eastern Europe, and for a time extended westward to the Atlantic. On the 25th another anticyclone appeared off the Irish coast, and during the remainder of the month it gradually passed to the Bay of Biscay and France, then across Spain to the Atlantic.

Winds.—In all districts the winds were largely from points in the Western half of the compass, but in some places there was a fair proportion from South-East or East. The days on which gale force was attained numbered 8 at Deerness, 7 at Guernsey, and 6 at Hastings and Strathpeffer.

Temperature.—*Mean at sea level* ranged from 46.4° at Scilly, and above 40° over Ireland, western Scotland, in most parts of Wales, and in the south-west of England to below 37° locally in the east of Scotland and of England, 36.3° at Crathes. The general distribution was in fair agreement with the normal, the actual shade values not differing greatly from the average, in excess in some districts, in defect in others. Portland Bill had an excess of 2° , and Cardiff a deficiency of nearly 2° , but these were exceptions to the general rule. *Highest* readings occurred mainly on the 1st, 2nd, 12th or 13th over England, on the 1st or 5th in Ireland, but on very irregular dates in Scotland— 56° at Killarney (5th) Eastbourne (6th), Clathick (24th); 55° at Waterford (12th); 54° at Dublin, Kingstown, Valencia and Culmpton (1st), Dunmow (2nd), Balruddery (12th), and Ballinacurra (28th). *Lowest* values were recorded in most parts of England and Ireland on the 24th or 25th, and in Scotland on the 26th and 31st. In very numerous instances the minima were below 20° , the lowest, 5° at Llangammarch Wells, 10° at Garforth, Stokesay, Hereford and Hillington (25th); 11° at Nairn (1st); 12° at Belvoir Castle and Shrewsbury (25th); 13° at Balmoral (24th); and 14° at Thornton Hall (24th). *Range* was generally about 30° , but a few places exceeded 40° , Llangammarch Wells 44° . At Scilly it was 25° , Blacksod Point 23° , and Donaghadee 22° . *Vapour Pressure* ranged from 0.183 ins. at Birmingham (9 a.m.) to 0.262 ins. at Roche's Point (6 p.m.). *Relative Humidity* ranged from 78 per cent. at Kew to 97 per cent. at Stornoway (8 a.m.) and Malin Head (6 p.m.). *Nocturnal Radiation Temperature* (on grass) was frequently 30° and under; on 27 nights at Hull, 26 at Coventry, Raucoby and Crathes, and on 25 at Cambridge. The lowest values reported were between the 24th and 26th, 1° at Llangammarch Wells, 5° at Edgbaston, 7° at Newton Rigg, and 8° at Coventry, Stokesay and Raucoby. *Mean Earth Temperature* at 1 ft. depth ranged from 35.7° at Lincoln and Marchmont to 43.1° at Guernsey; and at 4 ft. depth from 39.4° at Cockle Park to 46.4° at Guernsey and Eastbourne.

Rainfall.—With a few exceptions in the north of Scotland and at Gledelston precipitation was everywhere below the average, the deficiency exceeding 2 ins. in several localities, 3.3 ins. at Valencia, 3.7 ins. at Waterford, 3.8 ins. at Roche's Point, and 4 ins. at Killarney. The largest aggregates were 13.1 ins. at Glencarron, 7.7 ins. at Fort William, and 7.6 ins. at Landale. At a large number of stations the totals were less than an inch, Newcastle-on-Tyne and Reading receiving less than 0.4 in. There were very few falls of more than an inch in a day—on the 1st 1.1 in. at Bettws-y-Coed and Llangammarch Wells; on the 13th 2.2 ins. at Glencarron; and on the 27th 1.1 in. at Fort William. The days on which any precipitation was measured ranged from 29 at Stornoway, and 26 at Blacksod Point and Sumburgh Head to less than 10 in many places, 5 at Reading and Wokingham.

Bright Sunshine.—Generally over Britain the duration of bright sunshine was above the average by 31 hours at Hillington and 30 hours at Cambridge. In Ireland and the extreme north of Scotland there was a deficiency, the loss at Birr Castle amounting to 22 hours. The percentage of the possible duration ranged from 5 at Stornoway, 6 at Manchester (City), and 8 at Fort Augustus and Whitworth Park to 34 at Lowestoft and Cromer, 35 at Whitby, 36 at Skegness, and 37 at Scarborough.

FEBRUARY, 1907.

General Summary.—For the winter season the weather of the month under review was as a rule of an exceedingly quiet character, but there was a notable exception in the severest general gale which has been experienced in these islands for many months. There were during February five well defined types of pressure distribution. Between the 1st and the 6th two anticyclonic systems were transferred slowly across the country, the first from the south-westward, the second from the westward, both eventually passing on to Russia. They were accompanied by sharp, cold weather, severe frost being felt in all districts, the thermometer in the shade sinking to between 10° and 20° at a large number of stations, and in several localities the mean temperature of the period was from 5° to more than 7° lower than usual. Light variable breezes prevailed, few places experiencing more than a moderate breeze. In the night of the 6th the conditions underwent a complete change. A deep depression appeared between Iceland and Færøe, and remained almost stationary until the morning of the 12th, the barometer during part of the time being below 28.5 ins. in the east of Iceland. The system embraced the whole of the British Isles, where temperature increased to about the normal, and both the frequency and the quantity of the various forms of precipitation were in excess, but the winds were singularly weak, rarely rising to the force of a fresh or strong breeze on any section of the coast. The only instance of a gale at the telegraphic reporting stations was at Malin Head in the night of the 8th, when the barometer fell 0.5 in. in six hours, and the wind, which was previously only a fresh breeze, increased rapidly to a whole gale from South,

With the morning of the 12th the influence of this system was abruptly terminated; a new depression, with the minimum of pressure below 29 ins., advanced quickly from the Atlantic across our southern districts, and dispersed after two days over central Germany. Round the system there was a complete cyclonic circulation of the wind, the force over Scotland being very light, while over Ireland and England a strong to a high wind was common to all districts, and at some of the western and south-western coast stations a fresh or strong gale was experienced. A whole gale from North North-West prevailed at Scilly in the afternoon and evening of the 12th, the fiercest gust having a velocity of 71 miles per hour. Rain, sleet or snow fell generally during the passage of the disturbance. During the nine days, 14th to 22nd, pressure was highest to the south-westward, over the Bay of Biscay or the Peninsula, while disturbances of considerable depth passed eastward from the neighbourhood of Iceland, mainly beyond the Arctic Circle, so that South-Westerly to Westerly winds largely prevailed on our coasts, but with the following exceptions they were of no great strength. In the night of the 16th a disturbance, which had previously been indicated to the south-westward and southward of Iceland, passed between Orkney and Shetland to the Norwegian coast, subsequently going on to the Baltic and Russia. It occasioned a decided increase of Westerly wind over these islands, to a strong or high wind at nearly all stations, a fresh gale at Donaghadee, and a strong gale at Malin Head. This was soon followed by weather of the most tempestuous character, not only on our own coasts, but over a large portion of the Continent also. From the 23rd to the close of the month the distribution of pressure was anticyclonic, the winds light, and the weather mainly fair and dry, with temperature above the normal.

Fog was experienced in various districts very frequently, mainly on the 9th and 10th, 14th and 15th, and the 28th, unusually dense on the last day. Thunderstorms were fairly numerous, on the 9th at Malin Head, 17th at Fort William, 18th at Laudale, 19th general over north-eastern England, 20th at Markree Castle and locally in eastern England.

Ground frosts were often experienced, and the progress of vegetation was retarded to a marked extent. The observer at Belvoir Castle notes—"Frost on the ground almost throughout the month has kept the grass from growing, the pasture lands look very bare, genial showery weather will be welcome for them, but the land is in good condition for corn sowing." A remarkable feature was the continued dryness of the weather over the south of Ireland. The rainfall at Waterford during 1906 was below the average by 10·3 ins., at Killarney 10·5 ins., and at Roche's Point 16·8 ins. For the first two months of this year these stations return a deficiency of 5·6 ins., 6·6 ins., and 5·8 ins. respectively.

For the month as a whole pressure was in excess over the south-western half of the kingdom, in defect elsewhere; the winds were mainly Southerly to Westerly and North-Westerly in direction; temperature was deficient; rainfall was less than usual over the greater part of the country; and bright sunshine was in excess nearly everywhere.

Pressure.—Mean at 8 a.m. ranged from 30·09 ins. at Jersey, and above 30 ins. generally over southern England and Ireland to less than 29·8 ins. over northern Scotland, 29·62 ins. at Sumburgh Head. The values were below the average over Scotland and down the east coast of England, the deficiency exceeding 0·13 in. at Sumburgh Head. In other districts the results were in excess, by as much as 0·14 in. at Valencia. The distribution of mean pressure differed to some extent from the normal, and the gradient was decidedly steeper. *Highest* readings were registered on the 2nd, 30·61 ins. at Oxford, on the 5th, 30·59 ins. at Blacksod Point and Donaghadee, and on the 28th, when Oxford again touched 30·61 ins. *Lowest* readings occurred on the 8th, 29·15 ins. at Malin Head, on the 12th, 28·95 ins. at Roche's Point and Holyhead, and on the 19th, 28·13 ins. at Nairn. *Range* amounted to 2·4 ins. at Aberdeen and Nairn, and exceeded 2 ins. over Scotland and the extreme north of England and of Ireland, diminishing southward to 1·4 in. at Jersey.

Depressions.—As was the case in January most of the disturbances which affected any part of the region under observation during February had their minimum of pressure beyond the Arctic Circle. Of the few to the southward only two crossed the British Isles—on the 12th across the more southern districts, and on the 19th across the north of Scotland, both of them very deep. A shallow rain disturbance passed outside our south-western coasts and down the Bay of Biscay on the 22nd and 23rd.

Anticyclones.—Areas of high pressure covered the country during the first six and the last six days of the month, the maximum pressures being attained on the 2nd, 5th, and 28th. From the 14th to the 17th the conditions were influenced by an anticyclone in which the highest pressure was over the Bay of Biscay, northern Spain and westward to the Atlantic.

Winds.—In all parts of the kingdom the prevailing winds were from between South, West and North, but over the southern and western districts, and especially on the English Channel, South-Easterly to North-Easterly breezes were comparatively frequent. The days on which the force of a gale was felt numbered 7 at Bearness, Malin Head and Guernsey, 6 at Strathpeffer, Bettws-y-Coed and Dublin, 5 at Laudale, Durham, Southport and Hastings.

Temperature.—Mean at sea level ranged from 44° at Scilly, and above 40° in the extreme south-west of England and the south and west of Ireland to below 38° in many parts of Britain, slightly under 36° at Skegness. The general distribution was in fair accordance with the normal, but the actual values equalled the average only at Aberdeen and Scarborough; all other stations showed a deficiency which exceeded 2° in many cases, chiefly in the southern districts, and reached 4·2° at Arlington, and 5·2° at Llangammarch Wells. *Highest* readings were registered generally about the 15th–18th and 25th–28th, Crathes touching 60° on the 25th, Killarney 59° on the 15th, and there were numerous instances of 55° to 58°. *Lowest* values occurred on the 1st in most parts of Scotland, on the 2nd–4th and 23rd–24th in England, and on the 5th–6th in Ireland; 5° at Balmoral (1st), 10° at Llangammarch Wells (3rd), 13° at Wokingham (3rd), 14° at Garforth (2nd) and Marlborough (3rd), and many records below 20° in

Scotland and England. In Ireland 21° at Birr Castle and Clongowes Wood College (6th). Scilly alone, with a minimum of 35°, escaped frost. Range amounted to 45° at Balmoral, 42° at Clathick, Garforth and Shrewsbury, and 41° at Llangammarch Wells, but only 18° at Pembroke, and 17° at Scilly. Vapour Pressure ranged from 0.165 in. at Newton Rigg and Stonyhurst (9 a.m.) to 0.241 in. at Roche's Point (6 p.m.). Relative Humidity ranged from 77 per cent. at Kew (9 a.m.) to 97 per cent. at Malin Head (8 a.m.). Nocturnal Radiation Temperature (on grass) was very frequently 30° and under, on 25 nights at Coventry, 24 at Balmoral and Hull, and 23 at Cambridge and Crathes. The lowest records were 4° at Balmoral (1st) and Llangammarch Wells, 6° at Edgbaston, 7° at Coventry, Oundle and Newton Rigg (3rd). Mean Earth Temperature at 1 ft. depth ranged from 33.3° at Marchmont and 33.5° at Crathes to 40.9° at Guernsey; and at 4 ft. depth from 36.2° at Crathes to 45° at Eastbourne.

Rainfall.—Over the country generally the various forms of precipitation were below the average, but there was an excess over the north of Scotland and the north-west of Ireland. Killarney returned a deficiency of 2.6 ins., and Roche's Point 2.1 ins., while Laudale had an excess of 2.4 ins., and Glencarron 2.9 ins. The largest aggregates were 10 ins. at Glencarron, 9.2 ins. at Fort William, and 9.1 ins. at Laudale; the smallest 0.8 in. at Hereford, and 0.7 in. at Clacton-on-Sea and Whitby. There were few instances of falls of an inch or more in a day—on the 10th 1.1 in. at Dumfries; on the 13th 1.1 in. at Tealby; on the 16th 1.1 in. at Stonyhurst, 1.2 in. at Lairg, and 1.4 in. at Laudale; on the 18th 1.1 in. at Fort Augustus; and on the 19th 1.2 in. at Fort William, and 1.3 in. at Glencarron. The days on which precipitation was measured numbered 26 at Stornoway, and 24 at Blacksod Point and Sumburgh Head. Several localities had only 10 days, Marchmont, Whitby, Tealby, Southend-on-Sea and Reading 9, and the Forest of Dean (200 ft.) 8 days.

Bright Sunshine.—At a few of the south-western stations there was a deficiency of bright sunshine, by as much as 7 hours at Falmouth, and 17 hours at Scilly, but elsewhere the duration was above the average, particularly in the north. Newcastle-on-Tyne having an excess of 36 hours, Newton Rigg 37, Marchmont and Aberdeen 39, Durham 49, and Edinburgh 53 hours. The largest totals were 123 hours (49 per cent. of the possible) at Cockle Park, Durham, and 122 hours (47 per cent.) at Crathes; the smallest 45 hours at Fort Augustus (18 per cent.) and Bunhill Row, London (16 per cent.), 44 hours (16 per cent.) at Hull, and 35 hours (13 per cent.) at Manchester. The morning cloudiness (overcast sky = 10) ranged from 4.7 at Coventry to 9.2 at Sumburgh Head; and the evening cloudiness from 3.6 at Cambridge to 8.8 at Sumburgh Head. Fog occurred on 8 days at Yarmouth and Dublin (Trinity College), 9 at Kew, 10 at Hastings, and 11 at Southampton.

MARCH, 1907.

General Summary.—As the distribution of atmospheric pressure during the period under review was of a decidedly anticyclonic type, and disturbances possessed of much wind energy were unusually rare, the weather experienced was generally of a quiet character. Some of the Arctic disturbances of the first half of the month, on their passage eastward, occasioned strong or high South-Westerly to North-Westerly winds on the more exposed sections of our coasts; there were few instances of stronger winds, but in the night of the 4th, Stornoway felt a strong South-Westerly gale, and on the 10th Roche's Point a strong North-Westerly gale. The only boisterous weather over a considerable portion of the country occurred between the 16th and the 19th. On the morning of the 16th, a falling barometer with fresh to high Southerly winds over the southern half of the kingdom afforded indications of the approach of a disturbance towards Ireland. By evening the minimum of pressure was over central Ireland. At Valencia the lowest barometer reading, 28.87 ins., was registered at 4.40 p.m., when a very rapid rise set in, and at 6 p.m. the reading was 29.18 ins., an ascent of 0.31 in. in 80 minutes, of which 0.1 in. occurred in the first 20 minutes. During the night the system passed quickly, 36 miles per hour, north-eastward, and on the morning of the 17th the minimum of pressure was beyond Shetland. The South-Westerly to Westerly wind of the system attained the force of a fresh gale in several neighbourhoods in Ireland and England, a strong gale at Donaghadee and Liverpool, and a whole gale at Roche's Point. Very heavy rain fell in the districts in the immediate vicinity of the central line of progression, from 1 in. to 1.8 in. in places. There was thus a combination of very low atmospheric pressure, high winds and heavy rains at the time of the equinoctial spring tides, and the result was considerable damage from high tides and floods in Morecambe Bay and on other portions of the Irish Sea coasts.

The observations of the evening of the 17th showed another deep depression to be situated beyond our north-western coasts, and next morning the minimum of pressure was over the Moray Firth, the barometer having fallen below 29 ins. all over Scotland and in the north of Ireland. Following a due easterly course the disturbance passed on to central Russia, but a secondary which developed beyond the north of Scotland on the evening of the 18th went north-eastward along the Norwegian coast. These two systems occasioned very windy weather over the country generally during the 18th and 19th, many places reporting fresh South-Westerly to Westerly gales, Roche's Point a strong gale, and Donaghadee and Malin Head a whole gale. The anemometrical records show that only in the night of the 16th did the wind attain a velocity of 50 or more miles in an hour—Kingstown, 1 hour, 51 miles; Fleetwood, 3 hours, extreme 56 miles; Southport, 3 hours, extreme 60 miles, with gusts at the rate of 81 miles per hour; Pendennis Castle, 3 hours, extreme 55 miles. Holyhead had a gust with a velocity of 76 miles per hour. On the 18th and 19th gusts of 64 miles and 63 miles were registered at Southport. This ended the unsettled portion of the month, during which rain was of frequent occurrence in nearly all districts, with hail, sleet or snow at times, but although there were some heavy falls, mainly about the 10th and 16th, the aggregate amounts for the first three weeks were in excess of the normal only in Scotland, the north-west of

England and the north of Ireland; the Channel Islands received less than half the average quantity. During the remainder of the month a few light showers fell in Ireland and the north of Scotland. Over the rest of the kingdom there was, with only a few unimportant exceptions, no rain after the 19th, at several stations none after the 18th or 17th, while the last fall at Reading and Kearsney, near Dover, was on the 16th. This rainless and sunny period lasted in most localities until April 2nd. The small rainfall over southern Ireland, referred to in the February Summary, was still maintained, the deficiency for three months, January to March, amounting to 7·5 ins. at Waterford and Roche's Point, and 8·2 ins. at Killarney.

Fogs were unusually prevalent for the season, more especially in the opening days and from the 25th to the 28th. As a rule they were early morning fogs, but occasionally they lasted nearly all day in London and some of the large towns. Dense fog along the Channel caused the wreck of the *White Star* s.s. "*Suevic*," and other steamers in the night of the 17th.

Thunderstorms were experienced in one or more places on the 10th, 13th, 14th, 17th, 18th, 19th and 20th; lightning alone on the 2nd and 8th; thunder alone on the 31st.

For the month as a whole, pressure, temperature and bright sunshine were in excess of the normal; rainfall was in excess in the north and north-west, in defect elsewhere; and the winds were mostly Southerly to Westerly or North-Westerly.

Pressure.—*Mean* at 8 a.m. ranged from 30·27 ins. at Jersey to 29·76 ins. at Sumburgh Head. The general distribution differed but slightly from the normal, the gradient being a little steeper, but the values were in all cases well above the average, by 0·05 in. in Shetland, and more than 0·1 in. everywhere else, 0·32 in. at Scilly and Jersey. *Highest* readings occurred on the 1st, 30·51 ins. at Clacton-on-Sea, 12th, 30·54 ins. at Bath and Oxford; 21st, 30·56 ins. at Jersey, 22nd, 30·51 ins. at Roche's Point, and on the 27th, again 30·54 ins. at Oxford. *Lowest* values were recorded on the 16th, 28·74 ins. at Donaghadee, and on the 18th, 28·76 ins. at Malin Head. There were few other depressions with the barometer below 29·5 ins. *Range* was from 0·8 in. at Jersey to 1·8 in. at Donaghadee.

Depressions.—On the 9th and 10th a shallow rain and snow disturbance visited the north-western and northern districts; on the 16th a deep one reached Ireland and passed rapidly to Scotland and the Norwegian coast; and on the 18th an equally deep one moved eastward across Scotland and the North Sea. The other depressions of the month were further north, mostly about or beyond the Arctic Circle.

Anticyclones.—Although the conditions were mainly anticyclonic the region of highest pressure was almost invariably situated between the north of Spain and the central parts of the Continent.

Winds.—Over the country generally the winds were largely from between South, West and North-West, but on the English Channel there was a considerable proportion from between South-East and North-East. Gale force was reported on 7 days at Dublin (City), on 6 days at Aspatria, Durham and Laudale.

Temperature.—*Mean at sea level* ranged from 49° at Killarney to 40° at Sumburgh Head. The general distribution differed from the normal in local details, the actual shade values being, almost without an exception, above the average, by more than 3° in places, 4° at Scarborough. *Highest* readings were observed in the closing days; in England, 73° at Whitby (26th), 72° at Maidenhead (30th); in Scotland, 66° at Lairg (26th), Nairn, Leith and Marchmont (29th); and in Ireland, 65° at Killarney (27th). *Lowest* values occurred mainly on the 12th over Britain, on very irregular dates in Ireland, 10° at Balmoral, 17° at Wokingham, 18° at Crathes, Cirencester (12th) and Lairg (11th). *Range* was large, exceeding 40° in numerous cases, 49° at Balmoral, 51° at Wokingham, but at Pembroke it was 18°, and at Scilly 15°. *Vapour Pressure* ranged from 0·195 in. at Oxford (8 a.m.) to 0·310 in. at Roche's Point (6 p.m.). *Relative Humidity* ranged from 70 per cent. at Jersey (6 p.m.) to 97 per cent. at Roche's Point (8 a.m.). *Nocturnal Radiation Temperature* (on grass) was very frequently below 30°, on more than 20 nights in several localities, 27 at Coventry. The lowest records were 5° at Balmoral (12th), and between 12° and 15° in various parts of England (5th and 12th). *Mean Earth Temperature* at 1 ft. depth ranged from 38·2° at Crathes to 45·7° at Guernsey; and at 4 ft. depth from 38·1° at Crathes to 45·6° at Guernsey.

Rainfall.—Precipitation in various forms exceeded the average in most parts of Scotland, northern Ireland and the north-west of England, by more than 2 ins. locally, 3·8 ins. at Glencarron. Elsewhere there was a deficiency which ranged upwards to 1·9 in. at Waterford. The largest aggregates were 11·7 ins. at Glencarron, and 8·2 ins. at Fort William; the smallest, 0·5 in. at Whitby and Ventnor, and 0·3 in. at Portsmouth. More than an inch fell at a number of western and northern stations on the 16th, and locally on the 4th, 7th, 9th, 10th, 14th, 17th and 19th. The days on which precipitation was measured numbered 27 at Stornoway and Glencarron, and 26 at Roche's Point, but only 8 at Southend-on-Sea, Portland Bill and Guernsey (Villa Carey).

Bright Sunshine.—With the sole exception of Valencia all stations had more sunshine than the average, the excess generally being very large, up to 112 hours at Tunbridge Wells, the total record at some stations being 60 per cent. or more of the possible duration, Hastings, Tunbridge Wells and Lowestoft returning 234 hours, or 64 per cent. of the possible. The smallest aggregate was 100 hours at Fort Augustus, an excess of 22 hours. The morning cloudiness (overcast sky = 10) ranged from 3·7 at Whitby to 8·6 at Prestwich; and the evening cloudiness from 2·3 at Cambridge to 8·3 at Stornoway. Fog occurred on 11 days at Greenwich, 12 at Kew, and 13 at Belvoir Castle, Southampton, and Dublin (Trinity College).

Aurora.—Auroral displays were witnessed at Laudale and Oban on the 10th, Spurn Head 11th, Stornoway 12th, and in various parts of Scotland and Ireland 21st.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

Prepared in the Meteorological Office under the direction of
W. N. Shaw, LL.D., Sc.D., F.R.S.

In compiling the following Tables (pp. 80 to 89) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 13.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are included in the Tables. The wind observations at Falmouth and Kew are based on the records of a standard Robinson anemometer (factor 2·2). At Southport the equivalent velocities are obtained from a Dines Pressure Tube Anemometer. Velocities of between 13 and 38 miles in the hour have been entered in the Tables as strong winds, velocities of 39 miles in the hour, or above, as gales. At the remaining stations the wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking the results.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		3. ENGLAND, S.:—	
Greenwich ..	The Royal Observatory.	Southampton .	A. Vaughan, for Director General of Ordnance Survey.

DAYS OF "CLEAR SKY" AND "OVERCAST."

A day is reckoned as a day of "clear sky" if the average of the estimates of the fraction of sky covered by cloud at the two hours of observation is less than .2, and as an "overcast" day if the average is greater than .8. At the Royal Observatory, Greenwich, records are kept of days persistently cloudless and days persistently overcast from midnight to midnight. The numbers of such days for the current quarter are:—Clear sky, 0, 0, 1; and Overcast, 3, 3, 0.

Oxford:—The observing hours at Oxford (the Radcliffe Observatory) are 8 a.m., noon and 8 p.m. The results given under Barometer and Hygrometer are the means of the observations at these hours reduced to the means for 9 a.m. and 9 p.m. by corrections deduced from a discussion of the Photographic Continuous Records. (See *Radcliffe Observations*, Vols. XXXIX. to XLV.) The averages used at Oxford are based on observations as follows: Rain, 86 years, 1815–1900; Temperature, 73 years, 1828–1900; Sunshine, 20 years, 1881–1900.

At Greenwich and Oxford the daily rainfall amounts are those for the 24 hours comprising the civil day. At other stations the amounts are those for the 24 hours ending at the time of morning observation; they are entered to the day preceding that of observation.

* The hours of Observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked -

For all the stations marked a, b, and c, the results under Barometer, Hygrometer and Cloud are based on the mean for districts. For the station marked c, and for Camden Square, where the wind and cloud are not observed at 9 p.m. order to make them more readily comparable with the results for other stations. They, as well as the numbers of days

† The averages used are obtained from observations extending over 35 years, namely:—For Rainfall, 35 years, 1871–1905; for Sunshine, 10 years.

‡ At the Royal Observatory the earth temperature is taken at 3 feet 2 inches below the surface; at this station numbers for the 1st Quarter, as thus calculated, are respectively Clear Sky 0, 0, 1, and Overcast 3, 3, 0. See Note on page

* At Oxford the observations are taken at 8 a.m., noon, and 8 p.m., see Note on page 79. At all the other stations the hour of Observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked :—

For all the stations marked a, b, and c, the results under Barometer, Hygrometer and Cloud are based on the morning for districts. For the station marked c, the results for Wind Direction and Number of Observations of Moderate and stations. Tazy, as well as the number of days of "Clear Sky" and "Overcast" at this station, are printed in French.

† The averages used are obtained from observations extending over 35 years, namely :—For Rainfall, 35 years, 1871-1905.

‡ At Belvoir Castle the earth temperature is taken at 3 feet below the surface.

§ See Footnote p. 79.

* The hours of Observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked for all the stations marked a. and c. the results under Barometer, Hygrometer and Cloud are based on the morning for districts. For the station marked c. the results for Wind Direction and Number of Observations of Moderate and Strong They, as well as the number of days of "Clear Sky" and "Overcast" at this station, are printed in French type. b. The averages used are obtained from observations extending over 35 years, namely:-For Rainfall, 35 years, 1871-1906. † See Footnote p. 70.

(St. Ann's Head, Bath, Scilly and Jersey) the observing hours are 8 a.m. and 6 p.m. Greenwich time. (Llangamarch Wells) the observing hour is 9 a.m. local time. Observations only, and these results are in consequence printed in French type. They have not been included in the means & have been multiplied by 2 in order to make them more readily comparable with the results for other stations, included in the means for districts. Temperature, 35 years, 1871-1905; Sunshine, 25 years, 1881-1905.

number of observations of calm and the number of days of gale are given in the table.

INDEX OF URBAN DISTRICTS

As constituted on 31st March 1907, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked have been altered since the Census of 1901.

NOTE.—The exact constitution of each Urban District and of each Registration Sub-district is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,166 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 148 were each co-extensive, at the end of March 1907, with one or more Registration Areas.

No. 234.] **Marriages**—*January, February, March, 1907.* [Price 9d.
 Births and Deaths—*April, May, June, 1907.*

*General Register Office, Somerset House,
26th July, 1907.*

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1907 is estimated at 44,104,321 persons; that of England and Wales at 34,945,600, that of Scotland at 4,776,063, and that of Ireland at 4,382,658.

In the United Kingdom 299,739 *births* and 167,944 *deaths* were registered in the three months ended 30th June 1907. The natural increase of population was, therefore, 131,795. The number of *persons married* in the quarter ended 31st March 1907 was 132,324.

The birth-rate in the United Kingdom in the *second* quarter of 1907 was 27·3, and the death-rate 15·3, per 1000 of the estimated population. The marriage-rate in the *first* quarter of 1907 was 12·2 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to a Return issued by the Board of Trade it appears that during the three months ended 30th June 1907, the total passenger movement to and from places out of Europe showed a net balance outward of 112,990 passengers, or an increase of 20 per cent. compared with the number in the corresponding period of the previous year.

The outward balance among persons of British origin amounted to 74,604 persons. Of these 44,331 were English, 18,181 Scottish, and 12,092 Irish. There was also an outward balance of 38,721 persons of foreign origin, and an inward balance of 335 among persons whose nationality was not stated.

Compared with the numbers in the corresponding period of last year the net outward balance of English passengers showed an increase of 28 per cent., that of Scottish an increase of 47 per cent., and that of Irish a decrease of 10 per cent., while that of foreign passengers showed an increase of 12 per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,031 registration sub-districts of England and Wales in the three months ended 30th June 1907; and the MARRIAGES in 15,637 churches or chapels, in 14,742 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, in the three months ended 31st March 1907.

Marriages.

In the *first* quarter of 1907 the marriages of 105,906 persons were registered, being equal to an annual rate of 12·3 persons married per 1000 of the estimated population, against an average rate of 11·3 per 1000 in the first quarters of the ten years 1897–1906.

Among registration counties with populations exceeding 100,000 the lowest marriage-rates were 8·6 in Hertfordshire, 8·8 in Northamptonshire and in Herefordshire, 9·0 in Shropshire, 9·1 in Oxfordshire, and 9·3 in Sussex; the highest rates were 13·6 in Warwickshire, 13·7 in Northumberland, 13·9 in Lancashire, 14·0 in Glamorganshire, 14·2 in London, and 14·3 in Durham.

Births.

The births registered in the *second* quarter of 1907 numbered 238,599, and were in the proportion of 27·4 annually per 1000 of the population; this rate is 1·4 per 1000 below the mean rate in the ten preceding second quarters, and is the lowest birth-rate recorded in any second quarter since civil registration was established. In registration counties with populations exceeding 100,000 the lowest birth-rates during the quarter were 20·7 in Sussex, 21·9 in Cornwall, 22·5 in Northamptonshire and in Devonshire, 23·0 in Somersetshire, and 23·1 in Dorsetshire; the highest rates were 31·4 in Staffordshire, 31·5 in Northumberland, 31·9 in Carmarthenshire, 34·2 in Glamorganshire, 34·9 in Durham, and 35·5 in Monmouthshire.

In 76 great towns the birth-rate averaged 28·1 per 1000, ranging from 18·1 in Hastings, 18·9 in Halifax, 19·1 in Hornsey, 20·4 in Bournemouth, 21·0 in Brighton, and 21·2 in Northampton, to 35·7 in Warrington, 35·8 in Middlesbrough, 36·1 in Sunderland, 36·6 in Merthyr Tydfil, 37·1 in Coventry, and 39·4 in Rhondda. In 142 smaller towns the mean birth-rate was 26·5 per 1000, and in the remainder of England and Wales excluding the 218 chief towns, it was 26·9.

Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths, was 111,161, against 114,389, 113,624, and 111,800 in the second quarters of 1904, 1905, and 1906 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 28s. 5d., 26s. 3d., and 26s. 5d. respectively in the preceding three quarters, was 29s. 0d. last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 4½d.; of prime beef, 7d.; of inferior mutton, 6½d.; of prime mutton, 9½d. Compared with the average prices in the preceding three months, the mean prices of inferior beef, of prime beef, and of prime mutton, showed a decrease of ½d., while the mean price of inferior mutton showed a decrease of ¾d. The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 17s. 4d. per ton, against 15s. 2d. per ton in the second quarter of 1906. The mean price of Consols was 84l. 18s. 2d., having been 86l. 9s. 3d. in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had been reduced on 17th January 1907 to 5l., was again reduced on 11th April to 4l. 10s., and further reduced on 25th April to 4l. The mean rate during the quarter was 4l. 3s. 9d.

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 764,924, exclusive of lunatics in asylums, of casual paupers, and of persons receiving medical relief only; of these 246,345 received in-door, and 518,579 out-door, relief. The proportion of the population in receipt of poor-law relief was 21·9 per 1000, against 22·6 and 22·3 per 1000 respectively in the second quarters of 1905 and of 1906.

Meteorology.

A detailed report on the weather over the United Kingdom in the past quarter, with a table of Monthly Results for a number of stations in England and Wales, prepared in the Meteorological Office, will be found on pp. 72-91.

The long spell of fine weather experienced in the opening quarter of the year was succeeded by a steady process of deterioration. April proved an exceedingly changeable month, but the amount of bright sunshine differed little from the average, and fluctuations in temperature, although often very considerable, were fairly well balanced so that the mean values differed but little from the normal. In May and June there was a large deficiency of sunshine and of seasonable warmth, and a considerable excess of rain. At many places situated in the northern half of the United Kingdom, the latter month was the wettest June experienced since the year 1872, and in some few places it was the wettest shown by records extending back for more than 40 years.

Throughout the earlier half of April the weather was influenced by a series of cyclonic disturbances which came in from the Atlantic. Precipitation was abundant, and, owing to the frequent change in the wind from polar to equatorial quarters, it varied in character from occasional falls of mild rain to showers of hail, sleet, or snow. The snowstorm experienced in

the south and south-east of England on the night of the 6th was unusually heavy for so advanced a period of the season, the fall on some of the higher grounds of Kent and Surrey lying to the depth of 5 or 6 inches. During the whole of this very disturbed period thunderstorms were of frequent occurrence, and were accompanied in many cases by exceedingly heavy falls of rain or hail. After the middle of the month the prevailing winds were from between West and North, and although the weather remained cool and very changeable, the rainfall was less heavy than in the earlier half of the period.

May was also extremely changeable, the month opening with a S. to W. gale of unusual strength for so advanced a period of the season. After this the winds were mostly from some polar quarter (*i.e.* from points between N. and E.), the only important exception occurring about the 11th or 12th, when a mild air spread up from the Southward. This current produced the highest temperatures of the whole quarter, the thermometer rising above 80° in the London district and in many parts of our eastern and midland counties. The fine, summer-like weather was, however, of short duration. In the latter half of the month the conditions were again very unsettled, with frequent thunderstorms in most districts, and with occasional heavy falls of rain. The downpour experienced between the 13th and 14th was especially heavy in the Midlands, Great Billing, near Northampton, registering as much as 2·8 inches in the space of 20 hours.

In June there was a remarkable absence of sunshine and of summer warmth. Very few places experienced a temperature much above 70°, and for a considerable portion of the month the midday readings were far below that level; in the night time the deficiency of warmth was, as a rule, very small. Rain was frequent, and light snow occurred at some places in the north at as late a date as Midsummer Day.

For the quarter as a whole the *mean temperature* was below the average, the deficiency ranging from rather less than a degree in London and in England, East and North-east, to about a degree and three-quarters in England, North-west, and to more than two degrees in England, South-west. The highest temperatures occurred in nearly all districts on May 12th, when readings of 80° or slightly above it were recorded at many places situated in the eastern and central parts of the country. In the western districts the readings were rather lower, and in the Channel district the thermometer never rose above 70°, the latter value being recorded on May 28th. The lowest temperatures occurred in the third week of April, mainly between the 18th and 20th of the month, when the sheltered thermometer registered at least five degrees of frost in many parts of the country, and as many as 10 degrees of frost in England, South-west (at Llangammarch Wells). In the Channel district the thermometer did not fall below 37°.

The *rainfall* of the quarter was everywhere in excess of the average. In London the total of 7·28 inches showed an excess of 28 per cent. Over the eastern counties the variation from the mean was somewhat smaller (only 26 per cent.), but in other parts of the country there was a far larger excess, amounting in most districts to more than 40 per cent. In England, North-west, and in the Channel district the fall was as much as 55 per cent. in excess of the normal. The number of days with rain was also large, especially in England, North-west, where, taking the quarter as a whole, a measurable quantity occurred on two days out of every three. Most districts experienced at some time or another a fall exceeding one inch in the space of 24 hours, the principal falls of this character being noticed on May 13th or 14th. In the London district (at Greenwich) a heavy downpour (1·0 inch)

was registered during a thunderstorm on June 29th, the fall synchronising very closely with a still larger one which occurred at the close of the previous June.

The *duration of bright sunshine* in London amounted to 423 hours, or to 31 per cent. of the possible amount, the aggregate being 77 hours less than the average. In many other parts of the country the deficiency was larger than in the metropolis. In England, North-west and South-west, the mean daily duration of sunshine for the whole quarter was about an hour and a half less than the average, while in the Channel district the daily deficit amounted to more than an hour and three-quarters.

Deaths.

The deaths registered in England and Wales last quarter numbered 127,438, and were in the proportion of 14·6 annually per 1000 persons living, the average rate in the ten preceding second quarters having been 15·7. In registration counties with populations exceeding 100,000, the death-rates ranged from 11·3 in Buckinghamshire, 11·5 in Northamptonshire, 11·6 in Middlesex, 11·7 in Leicestershire, and 12·0 in Essex, to 16·7 in Durham, 17·0 in Lancashire, 17·5 in Denbighshire, 17·6 in Carmarthenshire, 17·7 in Cumberland, and 18·1 in the North Riding of Yorkshire.

The 127,438 registered deaths included 65,858 of males and 61,580 of females, the death-rate among males being 15·7, and that among females 13·7, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding second quarters, the death-rate of males showed a decrease of 1·3, and that of females a decrease of 0·9 per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 114 is to 100; the mean proportion in the second quarters of the ten preceding years having been 117 to 100.

*Urban and Rural Mortality.**

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1907 is estimated at more than sixteen millions, the death-rate was 14·9 per 1000 living, or 0·3 above the death-rate of the whole country. The rates in the several towns ranged from 7·6 in Hornsey, 9·4 in Handsworth (Staffs.), 10·3 in East Ham, 10·5 in Kings Norton, and 10·6 in Willesden, to 19·8 in Oldham, 19·9 in Bolton, 20·0 in Sunderland, 20·1 in Wigan, and 21·9 in Middlesbrough.

In 142 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at nearly five millions, the death-rate was 14·0 per 1000 living, or 0·9 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with an aggregate population estimated at about fourteen millions, of whom more than six and a quarter millions live in small towns, and more than seven and a half millions in rural districts, the death-rate was 14·5.

* It should be stated that the death-rates in these Urban and Rural areas have not been corrected for differences in the sex and age constitution of the respective populations; also that owing to the difficulty of allocating to their proper areas deaths occurring in Institutions, the death-rate in the Rural area may possibly be slightly overstated.

Watering Places and Summer Resorts.

The deaths registered last quarter from all causes, and from each of the more important epidemic diseases, in those urban districts which are most nearly co-terminous with our chief watering places, are shown in Table XIII. For purposes of comparison the populations at the census of 1901 are also shown.

Mortality at Different Ages.

Of the 127,438 deaths registered last quarter, 24,735 were those of infants under one year of age, 59,942 those of persons aged between one year and sixty years, and 42,761 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 104 per 1000, the average in the ten preceding second quarters having been 116. Among registration counties with populations exceeding 100,000, the lowest proportions were 65 in Herefordshire, 68 in Hertfordshire and in Wiltshire, 73 in Berkshire, and 76 in Sussex and in Somersetshire. The highest proportions were 117 in the North Riding of Yorkshire, 118 in Durham, 121 in Nottinghamshire, 123 in Lancashire and in Cumberland, and 133 in Carmarthenshire.

In the 76 great towns infantile mortality averaged 110 per 1000 births, being 6 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 40 in Burton on Trent, 54 in Bournemouth, 65 in Reading, 68 in Stockton on Tees, 75 in Aston Manor, and 76 in Hastings and in Devonport; the highest were 146 in Grimsby, 149 in Hanley, 150 in Middlesbrough, 155 in St. Helens, 167 in Bolton, and 180 in Wigan. Among the 142 smaller towns infantile mortality averaged 105 per 1000 births, ranging from 42 in Salisbury, 47 in Watford, 49 in Penge, 55 in Heston & Isleworth and in Hove, and 57 in Bath, to 160 in Chadderton, 167 in Ilkeston, 171 in Kidderminster, 214 in Stalybridge, 223 in Hyde, and 237 in Tunstall. Excluding these 218 towns, infantile mortality in the remainder of England and Wales was in the proportion of 95 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 7.6 per 1000 of the estimated population at this group of ages, being 0.7 below the mean rate in the ten preceding second quarters. In the 76 great towns the mean mortality at this age-group was 8.3 per 1000, ranging from 3.7 in Hornsey, 4.4 in Handsworth (Staffs.), 5.2 in Kings Norton, 5.3 in Croydon, and 5.5 in Leicester, to 11.5 in Hanley, 11.8 in Oldham, 11.9 in Sunderland, 12.1 in Bolton, and 14.0 in Middlesbrough. In the 142 smaller towns the mortality at this age-group averaged 7.4 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 66.3 per 1000 of the estimated population at this group of ages; the mean rate in the ten preceding second quarters having been 66.2. In the 76 great towns the mean mortality at this age-group was 68.5 per 1000, the lowest rates being 41.4 in Hornsey, 45.2 in Leyton, 48.6 in East Ham, and 51.1 in Brighton; and the highest, 88.3 in Bolton, 94.3 in Rochdale and in Burnley, 95.4 in Huddersfield, and 101.6 in Preston. In the 142 smaller towns the rate averaged 67.0 per 1000.

Compared with the mean rates in the ten preceding second quarters, the mortality of infants under one year of age showed a decrease of 10.3 per cent.,

and that of persons between one year and sixty years of age a decrease of 8·4 per cent., while that of persons aged sixty years and upwards showed an increase of 0·2 per cent.

Mortality from certain Epidemic Diseases.

The 127,438 deaths from all causes include—

4,219	that were attributed to measles,
3,036	” ” whooping-cough,
1,165	” ” diphtheria,
1,077	” ” diarrhoea,
805	” ” scarlet fever,
493	” ” “fever,”
5	” ” small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 10,800 deaths were referred last quarter, being in the proportion of 1·23 per 1000 of the estimated population, or 0·11 per 1000 below the average proportion in the corresponding quarters of the previous ten years.

The rate of mortality from measles last quarter exceeded the decennial average, whilst the rates from each of the other diseases were below the respective averages.

Measles was returned as the cause of death in 4,219 instances, corresponding to an annual rate of 0·48 per 1000 of the population, or 0·07 per 1000 above the average rate in the second quarters of the preceding ten years. Of the 55 registration counties, 7 were free from measles fatality throughout the quarter. Among counties with populations of more than 100,000 the highest death-rates from this disease per 1000 of the respective populations were 0·78 in Warwickshire and in Cumberland, 0·81 in Staffordshire, 0·83 in Durham, 1·44 in the North Riding of Yorkshire, and 1·50 in Nottinghamshire. In the 76 great towns measles caused an average mortality of 0·65 per 1000. In 13 of these towns no deaths from this disease were registered during the quarter. The highest death-rates were 2·08 per 1,000 in Portsmouth, 2·10 in Nottingham, 2·47 in Birkenhead, 3·07 in Middlesbrough, 3·22 in Hanley, and 3·73 in Bolton. In the 142 smaller towns, measles was fatal on the average to 0·55 annually per 1000 living, and among these towns showed exceptional fatality in Scarborough, Tunstall, Ince in Makerfield, Carlisle, Ilkeston, Wednesbury, and Exeter. In the remainder of England and Wales the average measles death-rate was 0·28 per 1000. Among registration sub-districts outside the 218 chief towns, measles was especially fatal in Sutton in Ashfield, Knottingley, Barmbrough, Runcorn, Beeston, Whickham, and Wath.

Whooping-cough accounted, last quarter, for 3,036 deaths, and for a death-rate equal to 0·35 per 1000 annually, which hardly differs from the average rate in the ten previous corresponding quarters. In seven of the counties of England and Wales no deaths from this disease were registered; among counties with populations exceeding 100,000, the death-rate was 0·51 per 1,000 in Middlesex and in Lancashire, 0·55 in Bedfordshire, 0·57 in London, 0·60 in Essex, and 0·63 in Carmarthenshire. In the 76 great towns, whooping-cough caused an average death-rate of 0·47 per 1000 living. Six of these towns were free from whooping-cough mortality throughout the quarter, but the death-rate was equal to 0·86 per 1,000 in Wigan, 0·87 in St. Helens, 0·91 in Tottenham, in Grimsby, and in Stockton on Tees, 0·96 in Preston, and 1·34 in Salford. In the 142 smaller towns, the

average death-rate from whooping-cough was 0·34 per 1000, the disease being especially fatal in Fenton, Worcester, Edmonton, Finchley, and Llanelly. In the remainder of England and Wales, whooping-cough caused an average mortality equal to 0·21 per 1000 annually. Among registration sub-districts outside the 218 chief towns, whooping-cough was exceptionally fatal in Neath, Bewdley, Howden, Walsingham, Bungay, Binbrook, and Culmstock.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,165 deaths, a number corresponding to an annual rate of 0·13 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·05 per 1000. Four of the counties were entirely free from fatal diphtheria throughout the quarter. Among counties with populations exceeding 100,000 the highest death-rates from this disease were 0·20 per 1000 in Lincolnshire and in Durham, 0·21 in Herefordshire, 0·22 in the North Riding of Yorkshire and in Carmarthenshire, and 0·26 in Berkshire. The average death-rate from diphtheria in the 76 great towns was equal to 0·14 per 1000 of their aggregate population. No death from this disease occurred in three of these towns in the course of the quarter. The great towns in which diphtheria showed the highest fatality were the following :—Rochdale, where the rate was equal to 0·32 per 1,000 annually, Wolverhampton 0·35, Leyton and Sunderland 0·39, Hanley 0·48, and Reading 0·60. In the 142 smaller towns also the mortality from this disease averaged 0·14 per 1000, the rate being highest in Ealing, Luton, Middleton, Shipley, Wednesbury, and Brighouse. In the remainder of England and Wales, diphtheria was fatal in the average proportion of 0·12 per 1000 living. Among registration sub-districts outside the 218 chief towns, diphtheria was especially fatal in Yeovil, Callington, and St. Weonards.

Diarrhœa was the assigned cause of 1,077 deaths last quarter, equal to an annual mortality of 0·12 per 1000, or 0·05 per 1000 below the decennial average rate for the second quarters of the ten years 1897–1906. In six counties no deaths from diarrhœa were returned last quarter. Among counties with populations exceeding 100,000 the highest rates from this disease were 0·15 per 1,000 in Surrey, in Lancashire, and in Glamorganshire, 0·16 in London, 0·18 in Cumberland, 0·22 in Staffordshire and in the North Riding of Yorkshire, and 0·24 in Denbighshire. In the 76 great towns the average death-rate from diarrhœa was 0·14 per 1000; no deaths were returned in nine of these towns; the rate was highest in the following towns :—St. Helens 0·30 per 1000, Coventry and Oldham 0·31, Wolverhampton 0·35, Rhondda 0·43, and Middlesbrough 0·47. In the 142 smaller towns diarrhœa was fatal on the average to 0·13 per 1000 of the population, and caused the highest mortality in Dudley. In the remainder of England and Wales the death-rate from diarrhœa averaged 0·10 per 1000.

Scarlet fever accounted last quarter for the deaths of 805 persons, and for a death-rate of 0·09 per 1000 living, or 0·02 per 1000 less than the decennial average rate for the second quarter. Thirteen of the counties of England and Wales were free from scarlet fever mortality. Among counties with populations exceeding 100,000, the highest rates were 0·14 in Essex and in Lancashire, 0·17 in Leicestershire, 0·18 in Middlesex, and 0·22 in Lincolnshire. In the 76 great towns scarlet fever accounted for an average mortality equal to 0·12 per 1000 annually. No deaths from this disease were recorded in fourteen of these towns. The highest scarlet fever death-rates were 0·23 per 1000 in West Bromwich, in Liverpool, and in Warrington, 0·24 in Bootle, 0·25 in Leicester and in Salford, 0·28 in Grimsby, and 0·31 in Sheffield. In the 142 smaller towns scarlet fever was fatal in the average proportion of 0·08 per 1000 living, and caused the highest mortality in Dewsbury, Lincoln,

Bilston and Oldbury. In the remainder of England and Wales this disease caused an average death-rate equal to 0·06 per 1000 living. Among registration sub-districts outside the 218 chief towns, scarlet fever was exceptionally fatal in Marlow and Mottram.

“*Fever*” (including the three chief forms—*typhus*, *enteric fever*, and ‘*pyrexia*’ of uncertain origin) was the registered cause of 493 deaths last quarter, equal to an annual death-rate of 0·06 per 1000 of the population, or 0·03 per 1000 less than the average rate in the second quarters of the previous ten years. In ten counties no deaths from fever were returned last quarter; among counties with populations exceeding 100,000, the highest county fever death-rates were 0·09 per 1000 in Nottinghamshire, in Lancashire, and in Cumberland, 0·12 in the North Riding of Yorkshire, and 0·19 in Carmarthen-shire. In the 76 great towns also fever caused an average mortality equal to 0·06 per 1000 annually. In seventeen of these great towns no deaths from fever occurred; the towns with the highest fever death-rates were Portsmouth, Walsall, Grimsby, and Huddersfield, where the rate was equal to 0·17 per 1000, Rochdale 0·18, Barrow in Furness 0·20, St. Helens 0·26, Burton on Trent 0·30, and Wigan 0·32. In the 142 smaller towns also fever caused an average mortality equal to 0·06 per 1000 annually, the mortality being highest in Tipton and Workington. In the remainder of England and Wales also, the death-rate from fever averaged 0·06 per 1000. Among registration sub-districts outside the 218 chief towns, fever was especially fatal in Carmarthen, Llanelly (Brecknockshire), and Warsaw.

Small-pox was fatal to 5 persons last quarter, as compared with 1, 5, 12, and 4 in the four quarters immediately preceding. These 5 deaths belonged respectively to Northfleet, Cheriton, Southampton, Darwen, and Cardiff.

Violent Deaths.

The deaths in England and Wales that were referred to different forms of violence, either accidental or otherwise, numbered 4,769 last quarter, and corresponded to an annual rate of 0·55 per 1000 of the population, against an average of 0·59 in the ten preceding second quarters. In registration counties with populations exceeding 100,000, the lowest death-rates from violence were 0·28 in Wiltshire and in Carnarvonshire, 0·32 in Oxfordshire, 0·33 in Cambridgeshire, 0·36 in Leicestershire, and 0·40 in Buckinghamshire; the highest rates were 0·60 in Nottinghamshire and in Northumberland, 0·65 in Durham, 0·66 in the East and North Ridings of Yorkshire, 0·74 in Glamorganshire, and 0·87 in Monmouthshire. In the 76 great towns the mean rate was 0·56 per 1000 living; among the several towns the rate was only 0·05 in Aston Manor, 0·15 in Devonport and in Tynemouth, and 0·18 in Handsworth (Staffs.); but it rose to 0·84 in Wallasey, 0·85 in Sunderland, 0·88 in Tottenham, 0·92 in South Shields, 0·95 in Merthyr Tydfil, and 1·02 in Bury.

Certification of Causes of Death.

Of the 127,438 deaths registered in England and Wales last quarter, the causes of 116,960, or 91·8 per cent., were certified by registered medical practitioners, and the causes of 8,667, or 6·8 per cent., by coroners after inquest; whilst the causes of the remaining 1,811, or 1·4 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding second quarters having been 1·8 per cent. Among registration counties with populations exceeding 100,000 the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Middlesex, Somersetshire, Gloucestershire, Leicestershire, Cheshire, the North Riding of York-

shire, and Glamorganshire, but it reached 3·0 in Derbyshire, 3·1 in Bedfordshire, 3·3 in Herefordshire, 3·5 in Carnarvonshire, and 3·9 in Durham. In the 76 great towns the mean proportion of uncertified deaths was 0·9 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, West Ham, Leyton, Bournemouth, Southampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Aston Manor, Stockport, Wigan, Cardiff, or Swansea, the proportion per cent. rose to 4·1 in Burton on Trent, in Sunderland, and in Gateshead, 5·0 in Warrington, and 5·1 in South Shields.

Inquests.

Inquests were held in England and Wales concerning 8,667, or 6·8 per cent., of the total deaths, the mean proportion in the ten preceding second quarters having been 6·7 per cent. In the 76 great towns the proportion of inquest cases averaged 7·9 per cent., ranging from 0·9 in Aston Manor, 2·6 in Handsworth (Staffs.), 3·4 in Tynemouth, and 3·7 in St. Helens and in Gateshead, to 10·1 in Swansea, 10·2 in Croydon, in Bristol, and in Leeds, 11·0 in Southampton, and 13·3 in Tottenham.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 24,029, or 18·9 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding second quarters having been 16·3 per cent. In the 76 great towns the deaths in public institutions averaged 25·2 per cent. of the total deaths, the lowest percentages in the several towns being 4·5 in Rhondda, 5·2 in Handsworth (Staffs.), 7·6 in Kings Norton, 10·4 in Gateshead, and 10·6 in Wigan; the highest percentages being 27·7 in West Ham, 28·7 in Brighton, 29·1 in Walthamstow, 29·3 in Leyton, 32·9 in Liverpool, and 38·1 in London.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual birth and death-rates per 1000 living in these towns last quarter were as follows:—

—								Birth-rate.	Death-rate.
Edinburgh	23·0	17·1
Glasgow...	30·7	20·1
Dublin	28·8	25·4
Belfast	33·3	22·5

COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 28 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the past quarter (Table XIV.). Excluding the Indian cities, the highest and lowest annual birth- and death-rates during the second quarter of 1907 were as follows:—

BIRTH-RATES.

—				Highest per 1000 living.	—				Lowest per 1000 living.
Trieste	32·7	Brussels	17·9
Breslau	29·3	Paris	18·7
Bucharest	29·3	Berlin	22·9
Copenhagen	28·0	Prague	23·2
Munich	28·0	Antwerp	23·3
Budapest	27·1	Venice	23·3
				London ... 26·7					

DEATH-RATES.

—				Highest per 1000 living.	—				Lowest per 1000 living.
Bucharest	28·6	Brussels	13·0
Moscow	28·2	Antwerp	13·2
St. Petersburg	26·5	Amsterdam	13·6
Trieste	26·0	Christiania	13·8
New Orleans	24·4	Stockholm	14·8
Prague	22·6	Berlin	15·3
				London ... 14·0					

Small-pox caused 23 deaths in Moscow, 19 in Paris, 10 in Rio de Janeiro, 7 in St. Petersburg, 6 in New York, 3 in Trieste, 3 in New Orleans, and 1 in Vienna.

Measles was most fatal in proportion to population in St. Petersburg, Moscow, and Bucharest; *scarlet fever* in St. Petersburg, Budapest, Moscow, New York, and Chicago; *diphtheria* in St. Petersburg, Christiania, New York, Moscow, Toronto, and Philadelphia; *whooping-cough* in Trieste, Copenhagen, Antwerp, Bucharest, and Breslau; "*fever*" in St. Petersburg, New Orleans, and Philadelphia; and *diarrhæal diseases* in Moscow, St. Petersburg; Munich, Prague, and Breslau.

Infantile Mortality.—Among those cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 79 in Christiania, 96 in Stockholm, 98 in Amsterdam, and 102 in Paris, to 209 in Munich, 212 in Prague, 221 in Breslau, and 247 in Bucharest.

INDIAN CITIES.—The death-rate was equal to 34·4 per 1000 in Calcutta, 39·8 in Bombay, and 31·1 in Madras. *Small-pox* caused 552 deaths in Calcutta, 26 in Bombay, and 18 in Madras; *measles* caused 53 deaths in Madras, 35 in Calcutta, and 34 in Bombay. Under the heading "*fever*" 3610 deaths were classed in Calcutta, 3422 in Bombay, and 1149 in Madras, including 2675 deaths in Calcutta, 2575 in Bombay, and 1 in Madras from

plague. The mortality from *diarrhæal diseases* was excessive in all of these Indian cities; *Asiatic cholera* caused 618 deaths in Calcutta, 17 in Bombay, and 3 in Madras.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the second quarter of the year 1907 (*see* pages xxvii—xxxii); and in the two following Tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxiii—xxxviii).

TABLE V.—76 Great Towns.—Population: Births, Deaths, and Meteorology in the 13 Weeks ended 29th June, 1907.
NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.). The deaths in the other towns have been corrected, as far as possible, for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong.

NOTE.—The 142 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 at the Census of 1901. The deaths in these towns have been corrected for deaths occurring in Public Institutions, while in addition the deaths occurring in London of all persons known to belong to towns in the Metropolitan Outer Ring have been credited to the several towns to which they belong.

The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

^a See page 2, note ^a.

^b For London, the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrar.

II.—SOUTH EASTERN COUNTIES.—REGISTRATION DISTRICTS.

No.	Registration Districts.	Area in Statute Acres.	Enumerated Population, 1901.	Marriages		Deaths	The DEATHS in the Quarter are stated by the Registrars to include

* The Registration Sub-districts (2031 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; w indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; F a Hospital for Infectious Diseases; H another Hospital; and L a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

^b See page 2, note "b".

* See page 6, note "b".

* 307 : 1, 2, 4.—On 1st May, 1907, Stowey sub-district was abolished and its constituent parts divided between North therton (1) and Bridgwater (2); the boundary between North Petherton (1) and Middlezoy (4) was also altered. See ges 70-71. The births and deaths for North Petherton and Bridgwater cannot be shown separately: those for Middlezoy are shown as if the change had taken place at the beginning of the quarter.

* 308 : 4.—The 5 deaths from whooping-cough occurred in the parish of Clayhidon.

* 310 : 4.—Of the 7 deaths from diphtheria 6 occurred in the Borough of Yeovil.

CHANGES IN REGISTRATION DISTRICTS AND SUB-DISTRICTS IN THE QUARTER ENDED 30TH JUNE, 1907.

Changes in Registration boundaries are made by order of the Registrar-General, with the consent of the Local Government Board. Those changes which affect the boundaries of Registration Districts are necessitated by changes in the boundaries of Poor Law Unions.

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING THE
QUARTER ENDED JUNE 30TH, 1907.

EXTRACTED FROM THE
MONTHLY WEATHER REPORTS
OF THE
METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 170 STATIONS,
TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 58 STATIONS
IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

APRIL, 1907.

General Summary.—Following the exceptionally brilliant weather which the country experienced in March, the atmospheric conditions underwent a complete change, so that the month of April was, for the most part, of an unusually wet, cold and ungenial character, but relieved on numerous occasions by intervals of pleasant brightness. Throughout the first seventeen days the weather may be said to have been wholly under the influence of systems of low barometric pressure. On the opening day of the month the observations received from Iceland indicated the approach of a disturbance from the northern region of the Atlantic towards our western coasts, but, although the entire country was immediately brought within its influence, the minimum of pressure appears to have remained practically stationary out on the ocean for six days. A small disturbance, secondary to this main system, was developed over our south-western districts on the 3rd, but it soon coalesced with a depression which moved from Spain to the Gulf of Genoa, and subsequently passed away across Greece. By the morning of the 7th the pressure minimum of the Atlantic area had been transferred to the north of England, the line of progression then becoming rather erratic, first crossing Scotland to the Hebrides, then down to the Irish Sea region, and to the English Channel by the 9th, finally crossing the Continent to Italy and Turkey. No sooner had this system left the English Channel than another appeared beyond the south-western coasts, and between the 11th and the 15th its lowest pressure was found in the vicinity of the southern or northern coasts of Brittany. A new depression appeared over Scotland on the 16th, and next day it moved away up the Norwegian coast. During these seventeen days, therefore, a very unsettled type of weather ruled, the barometer was about one-third of an inch below the normal level, and the winds were exceedingly variable in direction, often from points between East and North, frequently blowing with the force of a fresh or strong breeze in various localities, but only on rare occasions rising to a fresh gale in one or two places. Rain was of frequent occurrence, and on several days there were falls of hail, sleet, or snow. A small shallow irregularity of pressure which was formed over the south-eastern counties in the night of the 6th-7th brought about, what was for the time of year, a very heavy fall of snow in the district, the country presenting a very wintry aspect on the morning of the 7th. At Parkstone, Dorset, the snow was from $1\frac{1}{2}$ in. to 2 ins. deep, and at Warlingham, Surrey (600 feet above M.S.L.), it was 6 ins. deep, some of it remaining on the ground on the following day. This disturbed period was also marked by thunderstorms, or thunder or lightning alone, on nearly every day in some part or other of the kingdom.

The most remarkable of the thunderstorms occurred on the 9th, in the immediate vicinity of Bidston Observatory, on the Cheshire side of the Mersey, where the disruptive effects of a violent discharge of lightning were of an interesting character. Two holes were made in the hedge, one 18 ins. in diameter and 20 ins. deep, perfectly circular from the surface to the full depth, the *débris* having been strewn over about three-quarters of the width of the road, as though it had been swept with a swift whirling machine, and the road itself was ploughed and furrowed at varying distances and widths for a distance of 18 feet. The other hole was 6 ins. in diameter, but was oblique, and vanished on the inner side of the hedge. Fence poles were splintered like match stems, barbed wire twisted and distorted in all shapes, and the gorse set on fire up to half a mile distance. Several men were thrown to the ground by the violence of the explosion, but there was no loss of life.

A captive balloon, attached by a steel piano wire, was sent up at Aldershot on the 11th. At 3.20 p.m., with about half a mile of wire out, a flash of lightning struck the wire and fused it all the way down. Thick, heavy fumes of brownish-yellow smoke, which hung about for some time, were observed after the event. During a thunderstorm at Ridlington, Rutland, early in the afternoon of the 17th, black darkness prevailed, the sky when clearing being of a sulphur colour, and the rain water black. (A fall of black rain also occurred at Loughor, South Wales, earlier in the month.)

Several observers comment on the heavy or violent falls of hail accompanying some of these thunderstorms. At Great Billing, Northamptonshire, there was a great thunderstorm on the evening of the 7th, with a heavy fall of soft hail, which, in drifts, was from four to five inches deep. The fogs experienced during this unsettled period were fairly frequent on the east coast (Scotland and England) as well as on the south and west coasts.

After the 17th the distribution of pressure was modified to a considerable extent, becoming for the most part anticyclonic, the central space of the system, however, being found, as a rule, beyond our western or south-western coasts, and occasionally on the Continent. This admitted of our weather being still affected to some extent by low pressure areas visiting the Iceland, Scandinavian, and North Sea regions, the general type of conditions being thus in a large measure westerly to northerly. The weather was of a very changeable character, not so unsettled as the first period, but occasional falls of rain, hail, sleet, and snow occurred. From time to time a high wind was felt locally on our coasts, but it was seldom that the force exceeded that of a fresh breeze. Temperature underwent large fluctuations. For example, on the 24th the maximum readings in various parts of England were as high as 70° to 74° , but two days later the afternoon values were below 50° in many localities, not exceeding 44° or 43° even at some of the stations on the south coast. Although thunderstorms were again reported on some days in different parts of the country, they presented no features of unusual interest. On several days various sections of the western and south-western coasts were enveloped in fog. The anemometrical records do not disclose a single instance of the wind attaining a velocity of 50 miles (a strong gale) in any one hour during the month, but at 11.5 a.m. on the 6th, at Pendennis Castle, there was a violent squall whose maximum velocity was at the rate of 68 miles per hour.

For the month as a whole pressure was deficient; temperature was somewhat lower than usual in most parts of the country; the winds varied greatly in direction, and were not of much strength; rainfall was deficient in some northern districts, greatly in excess in the south; and, except in a few instances, the duration of bright sunshine did not differ much from the normal.

Pressure.—*Mean at 8 a.m.* ranged from 29.81 ins. at Jersey to 29.71 ins. on the north-western coasts. There was thus a difference of only 0.1 in. between the extreme results, which is in accordance with the normal for the season. The actual values, however, were in all cases below the average, the deficiency amounting to 0.03 in. at Valencia, and 0.14 in. at Yarmouth. *Highest* readings were registered on the 11th, when 30.24 ins. were reached at Sumburgh Head, and between the 22nd and 25th, when at various western and south-western stations the mercury rose to 30.4 ins. and upwards, to 30.51 ins. at Jersey on the 23rd. *Lowest* values were observed during the first week, 28.97 ins. at Blacksod Point on the 2nd, 29.08 ins. at Portland Bill on the 3rd, below 29 ins. in the north of Scotland during the night of the 5th–6th, 28.93 ins. at Stornoway, and 29.08 ins. at Shields on the morning of the 7th. *Range* was moderate, from an inch at stations on the east coast of England to 1.4 in. in the west and north of Ireland.

Depressions.—With most of the disturbances which came within the region under observation, the pressure minimum was at a considerable distance from the British Isles, about Iceland, Scandinavia, and southern Europe. The few that approached our coasts or visited the land were, in nearly every case, slow-moving, following erratic paths, and remaining in our neighbourhood some days, one of them dominating the weather during the first nine days. As a general rule, however, the systems were of no great depth, only two of them having barometer readings slightly below 29 ins.

Anticyclones.—On the evening of the 25th, Ireland was under the central space of the only area of high pressure which visited these Islands during April. The others were either far to the northward, the westward, or south-westward, or on the Continent. When the highest barometer reading for the month was reached at Jersey on the 23rd, the region of maximum pressure was on the Bay of Biscay.

Winds.—As pressure during the first half of the month was lowest over and to the west and south of the country, and during the second half highest over the same region, the winds were about equally distributed round the compass. The force of a gale was reached at Deerness on 7 days, and at Wick, Llandale, Aspatria, and Guernsey on 3 days.

Temperature.—*Mean at sea level* ranged from 49° at Jersey, and rather above 43° at a few other southern stations to below 44° in the north-east of Scotland, less than 42° at Sumburgh Head. The general distribution was much about the same as the normal. In most parts of the Kingdom the actual values were below the average, while in the north and east of Scotland, and the north-east and east of England, many stations showed an excess. As a rule, however, the difference from the average either way was small, less than 1° , there were few instances of more than $1^{\circ}.5$. *Highest* readings occurred mainly on the 2nd in Scotland, 65° at Leith and Strathpeffer, and 66° at Nairn; on the 23rd in Ireland, 67° at Dublin (City), and 68° at Waterford; and on the 24th in England, 73° at Cambridge, and 74° at Maidenhead. *Lowest* values were recorded mostly on the 4th, 5th, or 18th in Ireland, 25° at Phoenix Park (5th), and 26° at Markree Castle (18th); and on the 18th or 19th in Britain, 21° at Garforth (19th), 22° at Llangammarch Wells (18th) and Lairg (23rd), and 24° at Clathick (18th). *Range* varied greatly, exceeding 40° at a number of places, amounting to 46° at Barnet and Wokingham, and 47° at Maidenhead. On the other hand it was 20° at Malin Head, 18° at Pembroke, and only 14° at Scilly. *Vapour Pressure* ranged from 0.216 ins. at Nairn (8 a.m.) to 0.289 in. at Tottenham (9 a.m.) and Roche's Point (6 p.m.). *Relative Humidity* ranged from 73 per cent. at Leith (6 p.m.) to 95 per cent. at Skegness (7 a.m.). *Nocturnal Radiation Temperature* (on grass) was, for the time of the year, very frequently 30° and under, in many places on 10 or more nights, on 17 at Crathes and Balmoral, 18 at Newton Rigg, and 19 at Coventry. At a number of stations readings below 20° were registered, 16° at Raueby (19th), 15° at Stonyhurst and Prestwich, and 14° at Llangammarch Wells and Newton Rigg (18th). *Mean Earth Temperature* at 1 ft. depth ranged from $43^{\circ}.8$ at Harrogate, Sheffield, and

Marchmont to 49°·6 at Guernsey; and at 4 ft. depth from 42° at Crathes to 48°·7 at Guernsey.

Rainfall.—At the majority of stations in the north and east of Scotland and the north-west of England, the precipitation was below the average, but nowhere to a marked extent. Elsewhere nearly all stations returned an excess, which, in numerous instances in the south, was more than 1·5 in., as much as 2·1 ins. at Newquay, 2·2 ins. at Shaftesbury, and 2·4 ins. at Southampton. At several of the southern stations and locally in Scotland, the aggregate total for the month was more than 4 ins., Laudale 5·4 ins. and Falmouth 5·9 ins. The smallest amounts recorded were in the north-west of England, 1 in. at Harwarden Bridge and Whitworth Park (Manchester), and 1·1 in. at Manchester (City) and Rhyl. Falls of an inch or more in a day were few in number. On the 5th 1·4 in. at Laudale; 6th 1 in. at Epsom; 7th 1·8 in. at Balmoral; 12th 1·1 in. at Stokesay and Forest of Dean (900 ft.), and 1·4 in. at Hereford; and 20th 1 in. at Falmouth and 1·1 in. at Arlington and Port Talbot. The days on which precipitation was measured numbered 28 at Foynes, 27 at Lairg, and 26 at Blacksod Point, ranging down thence to 11 at Glasgow and Forest of Dean (900 ft.), and 10 at Clathick and Whitby.

Bright Sunshine.—Generally speaking the duration of bright sunshine throughout the country did not vary much on one side or the other of the average, but there was a deficiency of 36 hours at Markree Castle and Stonyhurst, 38 hours at Douglas, and 40 hours at Cambridge, while Eastbourne had an excess of 31 hours. The largest aggregates were 203 hours at Eastbourne, and 200 hours at Falmouth (49 per cent. of the possible); the smallest 99 hours (24 per cent.) at Hull, 95 hours (23 per cent.) at Huddersfield, and 87 hours (21 per cent.) at Birmingham and Whitworth Park (Manchester). The morning cloudiness (overcast sky=10) ranged from 5·3 at Portsmouth to 8·8 at Trinity College, Dublin; and the evening cloudiness from 4·7 at Eastbourne to 8·1 at Sheffield. Fog occurred on 8 days at Belvoir Castle, on 6 days at Jersey, and on 5 days at Dungeness, Hastings, and Roche's Point.

Aurora.—An auroral display was witnessed in the Hebrides on the evening of the 14th.

MAY, 1907.

General Summary.—As is so very commonly the case at this period of the year, the weather experienced during the month under review has proved of an exceedingly variable character, resulting in great extremes of day maximum and of night minimum temperatures. The weather was frequently dull, cold and cheerless, with much rain; occasional hail, sleet or snow, and thunderstorms of more or less severity were frequent. In the Summaries for each of the four months, January to April, it was pointed out that most of the disturbances which had come within the area under observation had moved on an easterly path, with their minima of pressure about or beyond the Arctic Circle. With the advent of May the situation underwent a great alteration, the distribution of atmospheric pressure becoming anticyclonic in the extreme north, where there was not a single instance of a disturbance during the month. All the low-pressure systems were found in lower latitudes, mainly in the neighbourhood of the British Isles.

The Iceland reports of May 1st pointed to the existence of a depression on the Atlantic at a considerable distance from our shores. By the following day the system, which was apparently advancing on a south-easterly course, arrived on the west coast of Scotland. It proved to be unusually deep for the time of year, the barometer sinking below 29 ins. at all stations in Scotland and in the north of Ireland and of England, below 28·7 ins. at several of the most northern ones. Altering its path to the north-eastward the minimum of pressure was transferred very slowly across Scotland, passed on to the Norwegian coast by the morning of the 5th, and there it quickly dispersed in the course of the day, the rate of progression since the arrival on the Scotch coast having been less than 10 miles an hour. A very shallow secondary depression which appeared at the southern end of St. George's Channel on the evening of the 3rd passed rapidly across England and the North Sea in the course of the night and subsequently disappeared in the direction of the White Sea. It was during the presence of the primary disturbance and its satellite in our neighbourhood on the 2nd and 3rd that the most boisterous weather of the month was experienced. The Southerly to Westerly wind increased quickly in force, and along the western and southern coasts a fresh gale was felt pretty generally, a strong gale being reported at Roche's Point, Pembroke, and Liverpool, and a whole gale at Blacksod Point. There was no instance of an anemometrical registration of a velocity of 50 miles in any one hour, but in gusts of short duration the wind rose to a velocity at the rate of 67 miles per hour at Shoberyryness, and of 64 miles per hour at Southport on the 2nd, and 62 miles per hour at Pendennis Castle on the evening of the 3rd.

Between the 5th and the 31st the low-pressure systems which had an influence on the weather of the British Isles were unusually numerous. As many as ten different areas made their appearance off the western coasts or in the vicinity of the Bay of Biscay. In every case the line of progression was in a northerly direction, towards a well defined anticyclone which was situated about Iceland and the Arctic Circle practically throughout the month. Against this high pressure the depressions failed to make much advance, the majority of them dispersing near the western end of the English Channel or in the western parts of Ireland. Only two were possessed of sufficient energy to cross the 60th parallel, where, to the westward of the of the Færøe, they disappeared on the 8th and on the 14th respectively. A shallow depression which formed near Paris on the evening of the 12th went northward across the North Sea, but on reaching southern Norway its course was altered to the eastward, and it passed away to central Russia.

From the 5th onward all the depressions were comparatively shallow, the barometer falling a little below 29·5 ins. only in a few instances. From time to time strong or high winds were felt on various sections of our coasts, but the only gale experienced at the telegraphic reporting stations occurred on the 9th, when Roche's point had a fresh Southerly gale, and Pembroke a strong gale. A gust of Easterly wind having a velocity at the rate of 60 miles an hour was registered by the anemometer at Pendennis Castle on the afternoon of the 5th.

The character of the month was largely determined by this great frequency of slow-moving disturbances, many of which, appearing about the Bay region, produced winds from the colder directions between East and North. Many chilly to very cold days were consequently experienced in all parts of the kingdom. Down to quite the close maximum afternoon temperatures below 50° were numerous. So late as the 20th stations as far south as Cirencester and Shaftesbury failed to pass above 47°. Various places in Scotland and the northern half of England did not exceed 44° on the 1st, 2nd, 19th, 20th, 21st, 30th, and 31st. A maximum of 43° occurred at Cockle Park, Morpeth on the 21st, at Sumburgh Head on the 29th, and at Ardross Castle on the 30th; and 42° at Marchmont on the 21st, and at Balmoral on the 30th. Partially to make up for this general prevalence of cold there were only two very short intervals of noticeable warmth. There was a sudden increase of temperature on the 11th and 12th, and maxima above 75° were registered in many parts of England, a few inland stations exceeding 80°. Isleworth and Great Billing touched 84°, and Barnet 85° on the 12th. A decidedly less marked rise took place near the end of the month, mainly affecting Scotland. Maxima exceeding 70° were not very numerous, but on the 26th Lairg touched 79°, Fort William 77°, and Glencarron 74°. There was thus a very large range in the afternoon temperature, from 30° to 35° in places, and even from the 12th to the 13th the reduction in the maximum values at some inland stations amounted to from 20° to 23°. On the whole cold nights were not nearly so frequent as cold days, but on some occasions the shade minima were rather low. Over southern Ireland the morning of the 5th was cold, with readings between 31° and 35°. At different times readings from 30° to 32° in the shade were registered in many districts; there were few lower readings, but Wokingham had 25° on the morning of the 19th. In the warmest period, however, night minima well above 50° were recorded at a large number of stations, 58° at Manchester (11th), Nottingham, Kew, Brighton, Worthing (12th), and Southend-on-Sea (13th), and 59° at Folkestone and St. Leonards (12th). The range of night temperature was consequently large, between 25° and 30° in some localities.

Rain was both abnormally frequent and heavy in the various districts, falls of more than an inch in a day occurring without as well as with thunderstorms, the closing days in particular being exceptionally wet over the north-eastern parts of Britain. Setting in with a sharp thunderstorm, there was a very heavy downpour in the Midlands during the night of the 13th and a part of the 14th, the rain continuing almost without any interruption. At Edgbaston, Birmingham, 2 ins. fell in 14 hours, and at Great Billing 2·8 ins. in 20 hours. On the 30th, at Ulverston, 2·6 ins. fell in 23 hours, no thunderstorm being reported in the neighbourhood. Hail or sleet was recorded in many localities on various occasions. There was snow at Strathearn on the 1st, at Leeds on the 2nd, at Kinlochewe on the 11th and 12th, at Llangamarch Wells and Stokesay on the 21st, and on elevated situations in Scotland and the north of England on several other days.

Thunderstorms, or thunder or lightning alone, were abnormally frequent, being reported at one or more stations on at least 25 days. Many of the storms were of a severe character, and accompanied by very heavy falls of rain, and occasionally hail. The largest areas affected were:—On the 6th, the portions of Wales and Ireland bordering on St. George's Channel, rainfall, 1·3 in. at Aberdovey, 1·1 in. at Dublin and Dundrum; on the 8th, Britain generally, from Wick to Jersey and Pembroke to Spurn Head; on the 9th, the northern half of England, 0·27 in. of rain in 8 minutes at Newcastle; on the 11th, the southern half of England; on the 12th, the greater part of Britain (from Oban southward) and in the north-east of Ireland; on the 13th, southern England, a deluge of rain at Southampton, 1·1 in. in 30 minutes; on the 14th, the Midlands, 1·3 in. of rain at Coventry; on the 23rd, the south-east quarter of England; on the 24th, England generally, 0·4 in. of rain at Hoylake in 14 minutes; and on the 25th and 31st, southern England.

Compared with previous months there was a perceptible increase in the frequency of fog along the coasts, the phenomena being reported in various localities on at least 18 days. From the 6th to the 8th the region mainly affected was in the north-east; on the 11th and 12th in the west; from the 24th to the 27th in the west, south, and east; and on the 30th and 31st in the west and south-west.

With such a record of disturbed conditions the sky was naturally often very cloudy, so what is usually one of the sunniest months of the year proved unusually dull, the duration of bright sunshine showing a loss of from two to three hours per day in places, the totals for the month being generally less than those for March.

For the month as a whole, pressure and bright sunshine were in defect; temperature was lower than usual except in the eastern half of England; rainfall as a rule was in excess; and the winds were mostly Southerly to Easterly and Northerly.

Pressure.—Mean at 8 a.m. ranged from 29·88 ins. at Jersey and Oxford, and above 29·85 ins. over nearly the whole of southern England to below 29·8 ins. in the west and north of Ireland. The values were in all cases below the average, by 0·06 in. at Sumburgh Head, and 0·2 in. at Valencia. The distribution of mean pressure was similar to that of May, 1906, and differed considerably from the normal. Highest readings were observed on the 17th, 30·43 ins. at Stornoway, and on the 28th, 30·34 ins. at Wick. Lowest values occurred on the 2nd, 28·62 ins. at Nairn, and 28·65 ins. at Stornoway, and on the 9th, 29·21 ins. at Valencia. In no other depression was there a reading as low as 29·3 ins. Range varied considerably, from 0·7 in. at Jersey and Dungeness to 1·8 in. at Nairn and Stornoway.

Depressions.—The disturbances which visited our neighbourhood in the course of the month were much more numerous than usual at this season, the majority of them making their appearance in the vicinity of the south-western and western coasts, but dispersing again in those regions after making very slow progress northward. With the exception of the very deep depression of the 2nd and 3rd, when the barometer fell to between 28·6 ins. and 29 ins. over the northern half of the kingdom, the disturbances were of only moderate depth.

Anticyclones.—A small area of relatively high pressure, with the barometer slightly above 30·1 ins. was found over Wales on the morning of the 27th, but during the rest of the month the central spaces of the anticyclones were outside these Islands, over Southern and Eastern Europe and in the Iceland region. The two periods of highest pressure over the British Isles, 16th to 20th, and 25th to 29th, were due to the southward extension of the Arctic anticyclone, the barometer rising to 30·7 ins. at one of the Iceland stations on the 28th.

Winds.—The distribution of the winds was somewhat irregular, but the most frequent were from points in the eastern half of the compass—South to East and North. The days on which gale force was attained numbered 5 at Durham and 3 at Blacksod Point, Roche's Point, Pembroke, Bettws-y-Coed, and Dunmow.

Temperature.—*Mean at sea level* ranged from 54·6° at Guernsey, 54·4° at Southampton, and above 53° at several stations in southern England to below 48° in the north and north-east of Scotland, 45·4° at Sumburgh Head. The general distribution was in fair agreement with the normal, the actual values being a little above the average at most stations in the eastern half of Ireland; below it in nearly all other places. Barnet had an excess of 2·7°, while Donaghadee showed a deficiency of 2·4°, and Portland Bill 2·8°. The comparatively small variation from the normal over the country generally is accounted for by the mildness of the nights. *Highest* readings occurred mainly on the 11th and 12th over England, 85° at Barnet (12th); mostly between the 25th and 28th in Scotland and Ireland, 79° at Lairg (26th), and 73° at Killarney (28th). *Lowest* values were registered in most districts between the 18th and 22nd, 29° at Makree Castle, Phoenix Park, Thornton Hall (18th), and Clongowes Wood College (19th); 27° at Llangammarch Wells (19th); 26° at Garforth (22nd); and 25° at Wokingham (19th); *Range* exceeded 45° at many stations, and amounted to 51° at Epsom, 52° at Wokingham, and 55° at Barnet, against 23° at Falmouth, 22° at Sumburgh Head, 20° at Portland Bill, and 16° at Scilly. *Vapour Pressure* ranged from 0·242 in. at Sumburgh Head (8 a.m. and 6 p.m.) to 0·367 in. at Tottenham (9 a.m.). *Relative Humidity* ranged from 71 per cent. at Greenwich, Camden Square (London), and Trinity College, Dublin (9 a.m.) to 95 per cent. at Malin Head (8 a.m.). *Nocturnal Radiation Temperature* (on grass) fell below 30° in most places; on 7 nights at Coventry and Dublin (Phoenix Park and Trinity College), on 8 nights at Llangammarch Wells. The lowest readings were registered between the 18th and 22nd, 22° at Greenwich (20th), and 19° at Llangammarch Wells (19th). *Mean Earth Temperature* at 1 ft. depth ranged from 47·7° at Birmingham to 52·2° at Salisbury; and at 4 ft. depth from 45·2° at Aberdeen to 52·2° at Portsmouth.

Rainfall.—Over the north of Scotland the month's precipitation was about equally divided between an excess and a deficiency. In nearly all other neighbourhoods the amounts were above the average, ranging upwards to an excess of 2·6 ins. at Shields, 2·7 ins. at Donaghadee, and 2·9 ins. at Harrogate. The aggregates exceeded 4 ins. in numerous places, amounting to 5·1 ins. at Cally, 5·2 ins. at Fort William, and 5·9 ins. at Laudale. At Greenwich the total was rather less than 1·5 in., and at Wokingham 1·3 in. Falls of more than an inch in a day were measured on the 6th, 13th, 14th, 23rd, 30th, and 31st. The days on which precipitation was registered numbered 27 at Huddersfield and Ampleforth, and 25 at Harrogate, against 12 at Wokingham, and 10 at Deerness.

Bright Sunshine.—With the exception of a nominal excess at Birr Castle and Fort Augustus the duration of sunshine was everywhere below the average, the divergence in many places being more than 60 hours, amounting to 83 hours at Jersey and Ventnor, 85 hours at Stonyhurst, and 88 hours at Scilly and Newton Rigg. The smallest records for the month were 92 hours (19 per cent. of the possible) at Huddersfield, 93 hours (19 per cent.) at Newcastle on Tyne, and 99 hours (20 per cent.) at Manchester, Whitworth Park; the largest totals—208 hours (43 per cent.) at Skegness, 209 hours (43 per cent.) at Felixstowe, and 212 hours (44 per cent.) at Cromer. The morning cloudiness (overcast sky = 10) ranged from 5·6 at Yarmouth to 9·5 at Stonyhurst; and the evening cloudiness from 5·3 at Lincoln to 9·1 at Prestwich. Fog was reported on 6 days at Shields, Holyhead, and Pembroke, 7 at Durham, 8 at Falmouth and Roche's Point, and 10 at Scilly.

JUNE, 1907.

General Summary.—The very disturbed atmospheric conditions which set in over the British Isles at the beginning of April, and were maintained without any important interruption during April and May, have with remarkable persistency been still further prolonged throughout the month of June. So far as regards the actual weather of the second quarter of the year it may be said to present the same general features of wet and cold, and yet the pressure conditions of the several months which produced similar weather differed in some important particulars. A striking contrast is found in the paths followed by the low pressure minima of May and of June. In the former month the systems caused a prevalence of cold winds from some Easterly point, whereas in June they gave us a preponderance of breezes from between South and West. Instead, however, of these winds from Equatorial directions bringing a softer and warmer atmosphere, they proved to be, relatively speaking, and allowing for the advance of the season, colder than the Easterly type of the preceding month.

An area of high pressure, the permanent mid-Atlantic anticyclone, maintained its position in the neighbourhood of the Azores, but the Arctic high pressure of May had receded to a more northerly position beyond Iceland. A dozen depressions approached our western coasts, and of these only three reached Norway, and one crossed Finland. One which appeared off the south of Ireland on the 11th, moved up the western Channels as far as the Færøe, and then went Westward to the Southward of Iceland. Another made its appearance well to the Southward of Iceland on the 17th, crossed the Orkneys and passed on to Northern Scandinavia. The other disturbances were either over or near the south-east of England or beyond the North Sea. For the summer season the barometer was very low, the readings on several days being below 29·5 ins. in some part or other of the country, and in the depressions of the 10th and 26th it dropped below 29·2 ins. on the north-western coasts. In all there were during the month over or near these islands the unusually large number of 17 disturbances, their duration being from one day to four days.

In these circumstances the weather was almost continuously in an unsettled state. Strong or high winds were of frequent occurrence in many localities, and at the telegraphic reporting stations the force of a gale was reached on the 3rd from West at Bath and Holyhead; on the 12th from South and South-West at Portland Bill; on the 16th from West at Shields; on the 17th from North at Wick; on the 18th from South at Malin Head; and on the 24th from West at Liverpool and Portland Bill, while Pembroke on the same day had a strong gale from the same direction. At the self-recording anemometrical stations the greatest velocity registered in any one hour was 47 miles from West at Fleetwood, on the 3rd, but at about midnight of the 24th, during a brief but hard gust from West at Holyhead, the velocity was at the rate of 64 miles per hour.

The month was wet more by reason of the abnormally large number of days on which precipitation was measured than of the aggregate total of rainfall, although in the majority of places the amount showed an excess. In many parts of Eastern, Central and Southern England and in the English Channel the amounts were actually less than the normal. Yet in these districts which return a deficiency in the quantity the frequency of the falls was nearly 40 per cent. in excess of the average, while in other regions the excess of the frequency ranged from 60 per cent. to more than 90 per cent. Another feature worthy of notice is that our summer thunderstorm rains are often of tropical intensity, and it is not uncommon for falls of one, two or three inches to occur in short intervals, but the month now under review, although marked by many thunderstorms, was singularly free from violent downpours. At Isleworth during the thunderstorm of the 30th the rain water was at first "blackish, apparently soot-coloured, as we often notice during foggy weather."

Snow is said to have fallen at Farnham, Surrey, on the 3rd, but still nearer the Summer Solstice there was sleet at Stornoway on the 22nd. On Midsummer Day there was sleet at Lendale, the observer at Kinlochewe reported snow on the neighbouring hills, and late in the evening snow fell at Harrogate.

Thunderstorms, or thunder or lightning alone occurred in some portions of the country on as many as twenty-six days, the 2nd, 3rd, 16th and 17th being the only days without. On the 1st the region affected was the South-East of England; on the 9th an extensive portion of Britain; on the 10th many parts of England and Ireland; on the 12th Northern England and Ireland; on the 15th and 22nd North-Eastern England; and on the 29th and 30th mainly over England. Some of the storms were very severe locally, but as a rule they were of slight to moderate intensity. On several occasions there were sharp falls of hail.

The unusual persistency of cold weather is strikingly illustrated by the fact that there was only one day (the 9th) during the month on which the thermometer rose to 70° or above at a number of stations, with two or three exceptions all situated in England and Wales. Some of the south coast stations return very low maxima, the highest point touched at Eastbourne being 61·5°, at Newquay and Valencia 61°, at Pembroke and Scilly 60°, and at Portland Bill 59°. In the far north Deerness did not exceed 57°, and Sumburgh Head 56°. The 24th, Midsummer Day, was one of the coldest days of the month, the thermometer not rising above 51° at Malin Head, 52° at Darwen, 53° at Birr Castle, Blacksod Point and Sumburgh Head, and 54° at Stornoway, Strathpeffer, Aberdeen, Blackpool and Holyhead; similarly low maxima were registered in many other places. Occasionally there were very cold nights locally. In the eastern half of the kingdom the minimum temperatures did not as a rule differ much from the normal, whereas at the more western stations they were frequently well below. There were not many records of ground frost, the lowest temperatures on the grass being registered in most districts on the last three mornings of the month.

Cloudy or overcast skies were the rule during this exceptional June, while on as many as eighteen days fog was experienced on various sections of our coast. The days on which fog was most prevalent were the 1st, 4th, 7th, 8th, 13th to 15th, 26th and 27th. On referring to the tables it will be seen that the mean amount of cloud was everywhere very large, from 75 to 95 per cent. of the sky being covered in many places. This fact is further rendered more prominent in the sunshine returns, which show a deficiency in every portion of the Kingdom, the deficiency at a considerable proportion of the stations amounting to from 2 hours to 3·5 hours per day. Comparing the figures with those of three months earlier it is found that with four unimportant exceptions there was less sunshine in June than in March, the difference in many cases being very large.

Taking the month as a whole pressure, temperature and bright sunshine were well under the normal; rainfall was nearly everywhere in excess; and the winds were mostly Southerly to Westerly in direction.

Pressure.—*Mean at 8 a.m.* ranged from 29·99 ins. at Jersey and above 29·8 ins. over the southern districts of England and Ireland to below 29·65 ins. in the north of Scotland, 29·62 ins. at Wick and Sumburgh Head. The values at all stations were below the average, from 0·03 ins. at

Jersey, and 0·09 ins. at Dungeness and Scilly to more than 0·25 ins. in the north, 0·31 ins. at Wick. The general distribution of mean pressure was similar to the normal, but the gradient was unusually steep, amounting to 0·36 ins. between Jersey and Wick, against the average of 0·11 ins. between Jersey and Shetland. *Highest* readings were registered on the 16th, 30·23 ins. at Roche's Point, and Scilly and 30·29 ins. at Valencia and Jersey. *Lowest* values occurred on several days, below 29·5 ins. on the 1st, 2nd, 3rd, 5th, 9th and 12th, 29·18 ins. at Malin Head on the 10th, 29·19 ins. at Stornoway on the 26th. and 29·20 ins. at Sumburgh Head on the 27th. *Range* was, in the absence of any anticyclones or cyclones of great intensity, only moderate, less than 0·7 in. at Shields, Spurn Head and Nottingham, and slightly exceeding an inch at Blacksd Point and Valencia.

Depressions.—For the Summer season the cyclonic systems which arrived on our shores from various parts of the Atlantic were uncommonly numerous. Disturbances having their origin elsewhere than on the ocean were few in number.

Anticyclones—One of the characteristic features of the month was the presence of high-pressure systems extending from Spain or the Bay of Biscay out towards or beyond the Azores, and from Iceland northward. On the 16th and 17th the anticyclone spread from the South-Westward over the British Isles, but soon withdrew to its usual position. Quite at the close of the month pressure became highest beyond our western coasts, the system apparently extending from the Tropics northward to Iceland and Greenland.

Winds.—Southerly to Westerly breezes largely predominated, but in the northern districts there was a considerable proportion of winds from about South-East and East. Over Scotland the air movement was generally light to moderate, but over Ireland and England it was frequently very brisk. The days on which the force of a gale was attained numbered 6 at Aspatia, 4 at Guernsey, and 3 at Malin Head, Dublin and Woburn.

Temperature.—*Mean at sea level* ranged from about 58° in London and at various other stations in the Thames basin, and 57° at Jersey to below 53° over Northern Ireland and nearly the whole of Scotland, 49° at Deerness, and 48° at Sumburgh Head. The general distribution was in fair agreement with the normal, but the actual shade values were below the average, by more than 4° at some stations in South-Western England, Wales, and Scotland, as much as 5° at Balmoral. *Highest* readings were recorded mainly on the 9th in Britain, but on very varied dates in Ireland. In Scotland, Glasgow and Nairn touched 70° and Lairg 71°, the values at the English stations ranging upwards to 77° at Maidenhead; in Ireland 67° was reached at Killarney (21st) and Waterford (26th), and 69° at Kilkenny (7th and 14th). *Lowest* values occurred mainly on the 4th in Scotland, on varied dates elsewhere, 33° at Balrudeary, Glasgow and Lairg (4th), 32° at Balmoral (23rd), and 31° at Garforth (29th). In Ireland the lowest was 37° at Markree Castle (17th), Kilkenny and Ballinacurra (29th). *Range* was, owing to the general absence of any high temperatures, moderate to slight, mostly 30° or less, but it amounted to 37° at Hereford, Maidenhead and Wokingham, 38° at Lairg and Aberdeen, and 42° at Garforth. At a number of coast stations it was 20° or less, only 16° at Falmouth, 15° at Newquay, 14° at Pembroke, and 11° at Scilly. *Vapour Pressure* ranged from 0·285 in. at Strathpeffer (9 p.m.) to 0·412 in. at Tottenham (9 a.m. and 9 p.m.). *Relative Humidity* ranged from 69 per cent. at Westminster (6 p.m.) to 94 per cent. at Aspatia (9 p.m.). *Nocturnal Radiation Temperature* (on grass) rarely passed below 30°, sinking to 29° at Crathes (28th), Coventry (29th) and Llangammarch Wells (30th), and to 28° at Balmoral (19th and 23rd). *Mean Earth Temperature* at 1 ft. depth ranged from 51·4° at Birmingham to 59·8° at Hastings; and at 4 ft. depth from 48·2° at Aberdeen to 56·3° at Portsmouth.

Rainfall.—All the English Channel Stations returned a deficiency of precipitation, and in the Eastern, Midland and Southern districts of England there was about an equal division between deficiency and excess, all other regions receiving an excess. The deficiency amounted to 0·6 in. at Salisbury, and 0·9 in. at Dunmow, but in the wet districts the excess was 2 ins. and upwards at a large number of stations, Lancashire being the relatively wettest neighbourhood with an excess of 3·8 ins. at Southport, 4·6 ins. at Prestwich and 5·5 ins. at Stonyhurst. Aggregate totals between 4 ins. and 8 ins. were far too numerous to be referred to individually. Stonyhurst measured 8·7 ins.; and of the extra rainfall stations, Castleton, Kirkby Lonsdale, returned 9·3 ins., and Graythwaite, Ulverstone, 10 ins. On the other hand some of the stations in the drier regions received less than 1·5 ins., Margate, Oundle and Totland Bay 1·4 ins., Broadstairs, Dunmow and Scilly 1·3 ins., and Portland Bill 1·2 ins. Considering the generally wet character of the month the falls of more than an inch in a day were remarkably few, the only reported instance exceeding 1·4 ins. being 2 ins. at Temple Bruer, Lincoln. In an unusually large number of instances, the days on which a measurable quantity of rain fell were 25 or more, 30 at Foynes, Carrigallen and Fort William, against 13 at Clacton-on-Sea, Folkestone and Tankerton, 12 at Felixstowe, Kearsney and Southend-on-Sea; and 11 at Broadstairs, Margate, Shoeburyness and Totland Bay.

Bright Sunshine.—Throughout the whole country there was a deficiency of sunshine, the loss amounting to 80 hours at Phoenix Park, 81 at Tenby, 82 at Stornoway, 83 at Newton Rigg, 87 at Stonyhurst, 101 at Scilly and 106 hours at Falmouth. At no station did the total duration for the 30 days reach 200 hours, the highest figure being 193 hours, or 40 per cent. of the possible duration, at Broadstairs and Guernsey (Villa Carey). At the other extreme Aberystwith totalled 99 hours (20%), Glasgow 94 hours (18%), Whitworth Park 93 hours (19%), Balta Sound (16%) and Oban (18%) 91 hours, and Fort Augustus 76 hours (14%). The morning cloudiness (overcast sky = 10) ranged from 6·0 at Whitby to 9·1 at Llangammarch Wells, 9·2 at Glasgow, 9·5 at Prestwich and Laudale, and 9·7 at Stonyhurst, and the evening cloudiness from 5·7 at Whitby to 8·9 at Nairn, and 9·1 at Prestwich. The days on which fog occurred numbered 8 at Plymouth, 7 at Pembroke and Deerness, and 6 at Hastings, Scilly, Holyhead, Donaghadee and Sumburgh Head.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

*Prepared in the Meteorological Office under the direction of
W. N. Shaw, LL.D., Sc.D., F.R.S.*

In compiling the following Tables (pp. 82 to 91) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 13.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are included in the Tables. The wind observations at Falmouth and Kew are based on the records of a standard Robinson anemometer (factor 2·2). At Southport the equivalent values are obtained from a Dines Pressure Tube Anemometer. Velocities of between 13 and 38 miles in the hour have been entered in the Tables as strong winds, velocities of 39 miles in the hour, or above, as gales. At the remaining stations the wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking the results.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		3. ENGLAND, S.:—	
Greenwich ..	The Royal Observatory.	Southampton .	A. Vaughan, for Director General of Ordnance Survey.
Kew	The Kew Observatory (National Physical Observatory).	Portsmouth ..	A. Mearns Fraser, M.D., M.O.H., for the Corporation.
Barnet	T. H. Martin, A.M.I.C.E.	Brighton ..	A. Newsholme, M.D., M.O.H., for the Corporation.
Tottenham ..	J. F. Butler-Hogan, M.D., LL.B., for Urban District Council.	Ventnor ..	Miss Gibson, for Royal National Hospital for Consumption.
Camden Square	H. Robert Mill, LL.D., D.Sc.	Portland Bill ..	The Meteorological Office.
Westminster ..	The Meteorological Office.	Eastbourne ..	S. R. Henderson, for the Corporation.
Norwood ..	W. Marriott.	Salisbury ..	Thos. Challis, for the Earl of Pembroke.
2. ENGLAND, CENTRAL:—		4. ENGLAND, E.:—	
Huddersfield	J. Firth.	Cromer ..	W. H. Archer, for Urban District Council.
Sheffield ..	E. Howarth. The Weston Park Museum.	Clacton-on-Sea	A. W. Shadick, for Urban District Council.
Nottingham ..	Arthur Brown, M.Inst.C.E., and Philip Boobbyer, M.D., M.O.H., for the Corporation.	Dunmow ..	Thos. Hacking. The Countess of Warwick's Agricultural School.
Wakefield ..	A. French, M.R.C.S., L.R.C.P.	Cambridge ..	R. Irwin Lynch, M.A. The Botanic Gardens.
Birmingham ..	A. Cresswell, for the Midland Institute Observatory.	Norwich (Eaton) ..	A. W. Preston.
Coventry ..	E. Hugh Snell, M.D., M.O.H., for the Corporation.	Bennington ..	Rev. J. D. Parker, LL.D.
Buxton ..	W. Pilkington.	Hillington ..	Rev. H. E. B. Ffolkes, M.A.
Cheltenham ..	A. C. Saxby, for the Corporation.		
Oxford ..	The Radcliffe Observatory.		
Shrewsbury ..	Capt. W. E. Manser, R.E.		
Stokesay ..	Rev. W. La Touche, B.A.		
Berkhamsted	E. Mawley.		
Belvoir Castle	W. H. Divers, for the Duke of Rutland, K.G.		

Station.	Observer.	Station.	Observer.
5. ENGLAND, N.E.:—		7. ENGLAND, S.W., WITH SOUTH WALES:—	
North Shields	The Meteorological Office.		
Spurn Head ..	The Meteorological Office.	Plymouth ..	H. Victor Prigg, A.M.I.C.E., for the Corporation.
Durham ..	Prof. R. A. Sampson, M.A., F.R.S.	Woolacombe ..	B. Fanshawe.
York ..	Oxley Grabham, M.A., for Yorkshire Phil. Soc.	St. Ann's Head, Pembroke.	The Meteorological Office.
Hull ..	H. B. Witty, for the Cor- poration.	Bristol ..	D. Rintoul, M.A. Clifton College.
Lincoln ..	S. R. Moss, for the Cor- poration.	Falmouth ..	The Meteorological Office.
Cockle Park .. (near Morpeth).	T. B. Hewetson, for the Northumberland County Council.	Bath ..	W. H. Symons, M.D., M.O.H., for the Corporation.
6. ENGLAND, N.W., WITH NORTH WALES:—		Llangammarch Wells.	W. Black Jones, M.D.
Llandudno ..	W. Little, for the Town Council.	8. THE CHANNEL:—	
Bettws-y coed	Dr. H. W. Fox, for District Council.	Scilly ..	The Meteorological Office.
Liverpool .. (Bidston.)	W. E. Plummer, M.A. Bid- ston Observatory.	Jersey ..	The Meteorological Office.
Aspatria ..	J. Smith Hill, B.Sc. The Agricultural College.	Guernsey ..	Adolphus Collettie.
Manchester ..	J. Niven, M.A., M.B., M.O.H., for the Corporation.		
Southport ..	J. Baxendell, for the Cor- poration.		
Stonyhurst ..	Rev. W. Sidgreaves, S.J. The Observatory.		

DAYS OF "CLEAR SKY" AND "OVERCAST."

A day is reckoned as a day of "clear sky" if the average of the estimates of the fraction of sky covered by cloud at the two hours of observation is less than .2, and as an "overcast" day if the average is greater than .8. At the Royal Observatory, Greenwich, records are kept of days persistently cloudless and days persistently overcast from midnight to midnight. The numbers of such days for the current quarter are :—Clear sky, 0, 0, 0; and Overcast, 1, 0, 0.

Oxford:—The observing hours at Oxford (the Radcliffe Observatory) are 8 a.m., noon and 8 p.m. The results given under Barometer and Hygrometer are the means of the observations at these hours reduced to the means for 9 a.m. and 9 p.m. by corrections deduced from a discussion of the Photographic Continuous Records. (See *Radcliffe Observations*, Vols. XXXIX. to XLV.) The averages used at Oxford are based on observations as follows: Rain, 91 years, 1815–1905; Temperature, 73 years, 1828–1905; Sunshine, 25 years, 1881–1905.

At Greenwich and Oxford the daily rainfall amounts are those for the 24 hours comprising the civil day. At other stations the amounts are those for the 24 hours ending at the time of morning observation; they are entered to the day preceding that of observation.

Name of Station, County and Height.	1907. [The figures give the height of the Cistern of the Baro- meter above Mean Sea Level.]	Baro- meter.	Air Temperature.								Hygrometer.				Earth Temp- era- ture.		Bright Sunshine.

a. (Westminster and Nottingham) the observing hours are 8 a.m. and 6 p.m. Greenwich time.
 b. (Barnet) the observing hours are 9 a.m. and 3 p.m. local time.
 c. (Coventry) the observing hour is 9 a.m. local time.
 Observations only, and these results are in consequence printed in French type. They have not been included in the means results for Wind Direction and the Number of Observations of Moderate and Strong wind have been multiplied by 2 in "Clear Sky" and "Overcast" at these stations, are printed in French type, but are included in the means for districts.
 Temperature, 35 years, 1871-1905; Sunshine, 25 years, 1881-1905. (Greenwich: Rain, 65 years; Temperature, 65 years;
 number of days of "Clear Sky" and "Overcast" are also computed from observations extending over the whole day. The
 number of observations of calm and the number of days of gale are given in the table.

* At Oxford the observations are taken at 8 a.m., noon, and 8 p.m., see Note on page 81. At all the other stations the hours of observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked :—

For all the stations marked a, b, and c, the results under Barometer, Hygrometer and Cloud are based on the morning for districts. For the station marked c, the results for Wind Direction and Number of Observations of Moderate and stations. They, as well as the number of days of "Clear Sky" and "Overcast" at this station, are printed in French.

† The averages used are obtained from observations extending over 35 years, namely :—For Rainfall, 35 years, 1871-1906 ;
‡ At Belvoir Castle the earth temperature is taken at 3 feet below the surface.

§ See Footnote p. 81.

* The hours of Observation are 9 a.m. and 9 p.m. local time, except at the stations marked for districts.

† The averages used are obtained from observations extending over 35 years, namely:—For Rainfall, 35 years, 1871-1906.

‡ See Footnote p. 81.

Wind Force.—Beaufort Scale (0-12) is used. The number of observations of moderate and strong wind (force 4-12) is used.

* The hours of Observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked :

For all the stations marked a. and c. the results under Barometer, Hygrometer and Cloud are based on the morning for districts. For the station marked c. the results for Wind Direction and Number of Observations of Moderate and Strong, as well as the number of days of "Clear Sky" and "Overcast" at this station, are printed in French type, b.

† The averages used are obtained from observations extending over 35 years, namely :- For Rainfall, 35 years, 1871-1900.

‡ See Footnote p. 81.

a. (St. Ann's Head, Bath, Scilly and Jersey) the observing hours are 8 a.m. and 6 p.m. Greenwich time.
c. (Llangamarch Wells) the observing hour is 9 a.m. local time.
Observations only, and these results are in consequence printed in French type. They have not been included in the means
and have been multiplied by 2 in order to make them more readily comparable with the results for other stations.
temperature, 35 years, 1871-1905; Sunshine, 25 years, 1881-1905.
The number of observations of calm and the number of days of gale are given in the table.

INDEX OF URBAN DISTRICTS

As constituted on 30th June, 1907, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked † have been altered since the Census of 1901.

NOTE.—The exact constitution of each Urban District and of each Registration Sub-district is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,167 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 149 were each co-extensive, at the end of June, 1907, with one or more Registration Areas.

AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 235.] **Marriages**—*April, May, June, 1907.*
Births and Deaths—*July, August, September, 1907.* [Price 9d.

*General Register Office, Somerset House,
26th October, 1907.*

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1907 is estimated at 44,104,321 persons; that of England and Wales at 34,945,600, that of Scotland at 4,776,063, and that of Ireland at 4,382,658.

In the United Kingdom 286,408 *births* and 137,753 *deaths* were registered in the three months ended 30th September 1907. The natural increase of population was, therefore, 148,655. The number of *persons married* in the quarter ended 30th June 1907 was 167,946.

The birth-rate in the United Kingdom in the *third* quarter of 1907 was 25·8, and the death-rate 12·4, per 1000 of the estimated population. The marriage-rate in the *second* quarter of 1907 was 15·3 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to a Return issued by the Board of Trade it appears that in the three months ended 30th September 1907, the total passenger movement to and from places out of Europe showed a net balance outward of 103,934 passengers, or an increase of 3 per cent. compared with the number in the corresponding period of the previous year.

The outward balance among persons of British origin amounted to 74,612 persons. Of these 48,607 were English, 12,016 Scottish, and 13,989 Irish. There was also an outward balance of 29,665 persons of foreign origin, and an inward balance of 343 among persons whose nationality was not stated.

Compared with the numbers in the corresponding period of last year the net outward balance of English passengers showed an increase of 14 per cent., that of Scottish an increase of 18 per cent., and that of Irish an increase of 46 per cent., while that of foreign passengers showed a decrease of 24 per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,029 registration sub-districts of England and Wales in the three months ended 30th September 1907; and the MARRIAGES in 15,643 churches or chapels, in 14,832 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, in the three months ended 30th June 1907.

Marriages.

In the *second* quarter of 1907 the marriages of 139,370 persons were registered, being equal to an annual rate of 16·0 persons married per 1000 of the estimated population, against an average rate of 17·3 per 1000 in the second quarters of the ten years 1897–1906.

Among registration counties with populations exceeding 100,000, the lowest marriage-rates were 11·4 in Carnarvonshire, 11·8 in Suffolk, 12·6 in Norfolk, 12·8 in Essex, 13·1 in Kent, 13·4 in Cambridgeshire, and 13·6 in Sussex and in Middlesex; the highest rates were 17·8 in Nottinghamshire and in Lancashire, 17·9 in the North Riding of Yorkshire, 18·1 in Monmouthshire, 18·4 in Durham, 18·5 in Northumberland, and 20·8 in Lincolnshire.

Births.

The births registered in the *third* quarter of 1907 numbered 230,058, and were in the proportion of 26·1 annually per 1000 of the population; this is 2·5 per 1000 below the mean birth-rate in the ten preceding third quarters, and is the lowest rate recorded in any third quarter since civil registration was established. In registration counties with populations exceeding 100,000 the lowest birth-rates during the quarter were 20·3 in Sussex, 21·4 in Oxfordshire, 21·6 in Dorsetshire, 22·0 in Cornwall and in Herefordshire, and 22·3 in Berkshire and in Northamptonshire; the highest rates were 29·2 in Nottinghamshire, 29·3 in Staffordshire, 30·1 in Carmarthenshire, 30·2 in Northumberland, 33·2 in Durham, 33·3 in Glamorganshire, and 34·7 in Monmouthshire.

In 76 great towns the birth-rate averaged 26·5 per 1000, ranging from 16·6 in Bournemouth, 16·9 in Halifax, 17·0 in Hastings, 17·5 in Hornsey, 19·9 in Bradford, 20·6 in Northampton, and 20·8 in Handsworth (Staffs), to 32·9 in St. Helens, 33·0 in Tynemouth, 33·6 in Sunderland, 33·7 in Middlesbrough, 33·9 in Rotherham, 34·7 in Merthyr Tydfil, and 35·3 in Rhondda. In 142 smaller towns the mean birth-rate was 25·9 per 1000, and in the remainder of England and Wales, excluding the 218 chief towns, it was 25·7.

Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths was 123,559, against 103,972, 114,470, and 105,263 in the third quarters of 1904, 1905, and 1906 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 26s. 3d., 26s. 5d., and 29s. 0d. respectively in the preceding three quarters, was 32s. 6d. last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 4½d.; of prime beef, 7½d.; of inferior mutton, 6¾d.; of prime mutton, 9¾d. Compared with the average prices in the preceding three months, the mean prices of prime beef and inferior mutton showed an increase of ¼d. and ¾d. respectively, while the mean prices of inferior beef and prime mutton remained unchanged. The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 20s. 4d. per ton, against 15s. 4d. per ton in the third quarter of 1906. The mean price of Consols was 82l. 15s. 2d., having been 84l. 18s. 2d. in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had been reduced on 25th April from 4l. 10s. to 4l., was again raised on 15th August to 4l. 10s. The mean rate during the quarter was 4l. 5s.

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 750,015, exclusive of lunatics in asylums, of casual paupers, and of persons receiving medical relief only; of these 239,173 received in-door, and 510,842 out-door, relief. The proportion of the population in receipt of poor-law relief was 21·5 per 1000, against 22·2 and 21·7 per 1000 respectively in the third quarters of 1905 and 1906.

Meteorology.

A detailed report, prepared in the Meteorological Office, on the weather over the United Kingdom in the past quarter, with a table of Monthly Results for a number of stations in England and Wales will be found on pp. 71-91.

With the exception of one fine warm week in July the weather for more than two-thirds of the quarter was changeable, showery, and exceedingly cool. Over the major part of England and Ireland the winds were mainly from S.W. or W., and in the western and southern districts they often blew with considerable strength. In North Britain the direction was more variable, a fair proportion of the winds coming from the Eastward. Each of these opposing currents was accompanied, as a rule, by a large amount of cloud, which effectively hindered the free action of the sun's rays, the result being seen in a general and striking absence of normal summer warmth. At the end of the first week in September a radical change took place, and for nearly the remainder of that month the weather was fine and dry, the temperatures observed in the closing week being in some places higher than at any time during the three preceding summer months.

July opened with a spell of exceedingly wet and inclement weather, the first week being the coldest experienced at such a season since the year 1890. In all the more western and southern parts of the Kingdom the rainfall was at the same time in excess of the average, but after the first week some

improvement in this respect was observed, although the thermometer still remained considerably below the normal. Towards the middle of the month the conditions became anticyclonic, and for rather more than a week the weather was fine and warm, especially in the western districts, where the amount of sunshine was greater than in the east. After about the 19th the conditions again became very unsettled, the change being accompanied on the 21st and 22nd by severe thunderstorms and heavy local falls of rain in Wales and the neighbouring parts of England and Ireland. Temperature now fell below its normal level, and for the remainder of the time cool, changeable, weather prevailed over the United Kingdom generally. Throughout the whole of July there was an unusual tendency for the formation of fog or mist round the British and Irish coasts.

Little improvement in the weather was experienced in August, the earlier half of the month being generally cool and inclement in all but the eastern districts, where the air was frequently warmer than in any other part of the country. Thunderstorms were general over our eastern counties on the 6th, and were experienced over a large portion of England on the 14th. After the middle of the month a partial improvement occurred in the southern and eastern districts, the weather remaining, however, very changeable in the west and north.

A continuance of cool, unsettled weather was experienced during the first few days of September, but after the 6th a decided improvement took place, and in many parts of England the only precipitation recorded during the remainder of the month was due to the prevalence of wet fogs or heavy dews. In the second week more than 60 per cent. of the possible amount of bright sunshine was recorded in most of the English districts, and more than 65 per cent. over our eastern and southern counties. Temperature was mainly above the average, the highest readings being registered either in the second or fourth weeks of the month. On each of those occasions the thermometer exceeded 75° in many parts of the country, and touched 80° in one or two isolated places. Frosts occurred, however, at several places in the midland and southern counties on the nights of the 22nd and 23rd. Towards the close of the month the weather began to break up, and on the 30th slight rain was experienced in many districts.

For the quarter as a whole the *mean temperature* was below the average, the deficit ranging from about half a degree in the Channel district, and from rather less than a degree in London to about a degree and three-quarters in England North-east, and to rather more than a degree in England East. The highest temperatures of the quarter occurred at various times in the different districts, but as a rule, either in the third week in July or the last week in September. They were lower, however, than in recent years. In no part of England did the thermometer rise much above 80° , and in England North-east it did not exceed 76° . In ordinary summer seasons readings above 85° are not unusual, and in most years the thermometer in some part of the country attains a maximum of 90° . The lowest temperatures of the quarter occurred as a rule either in the first or fourth weeks of September, when the thermometer fell to the freezing point in several places, and to 30° in England North-east (at Durham, on the 4th). In the Channel district the absolute minimum, registered on July 12th, was very little below 45° .

The *rainfall* of the quarter was considerably below the average—a result due in a large measure to the prolonged drought which occurred in September. In London the total of 4.16 inches, did not amount to more than 69 per cent. of the average. The southern and Channel districts were still drier, the former recording only 42 per cent, and the latter only 55 per

cent. of the normal quantity. In the western and central districts the deficiency was not so great, but even in the wettest region (England North-west) the total fall did not amount to as much as two-thirds of the average. The number of days with rain was also small, varying from 31 in England South and 35 in London, to 41 in England Central and South-west, and to 43 in England North-west. The heaviest individual falls recorded during the quarter were 2·69 inches at Bath on July 21st, 1·85 inch at Oxford on July 9th, and 1·54 inch at Tottenham on July 22nd.

The *duration of bright sunshine* in London amounted to 498 hours, or to 38 per cent. of the possible, the aggregate being 32 hours less than the average. A slight deficiency was reported also in most of the rural districts, but in England North-west the amount agreed almost precisely with the average, while in England South and England South-west there was a slight excess.

Deaths.

The deaths registered in England and Wales last quarter numbered 106,499, and were in the proportion of 12·1 annually per 1000 persons living; this rate is 3·9 per 1000 below the mean rate in the ten preceding third quarters, and is the lowest death-rate recorded in any quarter since civil registration was established. The abnormal fall in the death-rate of the past quarter was mainly due to the showery and exceedingly cool summer which checked the rise in the rate of child mortality that usually occurs in this quarter. In registration counties with populations exceeding 100,000, the death-rates ranged from 9·4 in Northamptonshire, 9·7 in Essex, 9·9 in Buckinghamshire, and 10·0 in Surrey, in Berkshire, and in Middlesex, to 13·1 in the East Riding of Yorkshire, 13·3 in Northumberland and in Cumberland, 13·7 in Durham, 14·2 in Lancashire, and 14·5 in the North Riding of Yorkshire.

The 106,499 registered deaths included 55,869 of males and 50,630 of females, the death-rate among males being 13·1, and that among females 11·1, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding third quarters, the death-rate of males showed a decrease of 4·3, and that of females a decrease of 3·7 per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 118 is to 100; the mean proportion in the third quarters of the ten preceding years having been 117 to 100.

*Urban and Rural Mortality.**

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1907 is estimated at more than sixteen millions, the death-rate was 12·2 per 1000 living, or 0·1 above the death-rate of the whole country. The rates in the several towns ranged from 6·5 in Hornsey, 7·5 in Kings Norton, 8·0 in Willersden and in Leyton, 8·5 in Walthamstow, 8·6 in East Ham, and 8·8 in Handsworth (Staffs), to 14·9 in Oldham and in Merthyr Tydfil, 15·0 in Hanley and in Stockton on Tees, 15·6 in Great Yarmouth and in St. Helens, 15·9 in Sunderland, and 16·4 in Liverpool.

* It should be stated that the death-rates in these Urban and Rural areas have not been corrected for differences in the sex and age constitution of the respective populations; also that owing to the difficulty of distributing to their proper areas deaths occurring in Institutions, the death-rate in the Rural area may possibly be slightly overstated.

In 142 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at nearly five millions, the death-rate was 11·6 per 1000 living, or 0·6 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with an aggregate population estimated at about fourteen millions, of whom more than six and a quarter millions live in small towns, and more than seven and a half millions in rural districts, the death-rate was 12·1.

Mortality at Different Ages.

Of the 106,499 deaths registered last quarter, 22,740 were those of infants under one year of age, 50,055 those of persons aged between one year and sixty years, and 33,704 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 99 per 1000, the average in the ten preceding third quarters having been 187. Among registration counties with populations exceeding 100,000, the lowest proportions were 49 in Wiltshire, 51 in Dorsetshire, 56 in Buckinghamshire, 60 in Hertfordshire, 66 in Northamptonshire, 67 in Surrey, in Bedfordshire and in Shropshire, and 68 in Sussex and in Herefordshire. The highest proportions were 110 in Cheshire, 111 in the East Riding of Yorkshire, 112 in Staffordshire, 113 in Durham, 118 in Nottinghamshire and in the West Riding of Yorkshire, and 128 in Lancashire.

In the 76 great towns infantile mortality averaged 109 per 1000 births, being 10 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 49 in Hastings, 56 in Hornsey, 60 in Croydon, 61 in Leyton, 62 in Huddersfield, and 67 in Walthamstow; the highest were 148 in Hanley, 152 in Wigan, 153 in St. Helens, 156 in Walsall, and 165 in Sheffield. Among the 142 smaller towns infantile mortality averaged 100 per 1000 births, ranging from 31 in Guildford, 32 in Reigate, 39 in Tunbridge Wells, 40 in Darwen, and 45 in Poole, to 182 in Bilston, 201 in Hindley, 204 in Leigh, 222 in Widnes, and 287 in Ince in Makerfield. Excluding these 218 towns, infantile mortality in the remainder of England and Wales was in the proportion of 87 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 6·3 per 1000 of the estimated population at this group of ages, being 1·2 below the mean rate in the ten preceding third quarters. In the 76 great towns the mean mortality at this age-group was 6·6 per 1000, ranging from 2·8 in Hornsey, 3·7 in Willesden, 4·0 in Kings Norton, and 4·3 in Bournemouth, to 8·9 in St. Helens, 9·1 in Liverpool, 9·3 in Sunderland, and 9·6 in Merthyr Tydfil. In the 142 smaller towns the mortality at this age-group averaged 6·1 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 51·7 per 1000 of the estimated population at this group of ages; the mean rate in the ten preceding third quarters having been 53·3. In the 76 great towns the mean mortality at this age-group was 53·0 per 1000, the lowest rates being 33·1 in Leyton, 35·3 in Kings Norton, 35·8 in Coventry, and 36·2 in Walthamstow; and the highest, 70·2 in Preston, 70·3 in Oldham, 71·1 in Stockton on Tees, 71·5 in Barrow in Furness and 81·6 in Hanley. In the 142 smaller towns the rate averaged 52·1 per 1000.

Compared with the mean rates in the ten preceding third quarters, the mortality of infants under one year of age showed a decrease of 47·1 per cent., that of persons between one year and sixty years of age a decrease of 16·0 per cent., and that of persons aged sixty years and upwards a decrease of 3·0 per cent.

Mortality from certain Epidemic Diseases.

The 106,499 deaths from all causes include—

3,811	that were attributed to diarrhœa,	
2,312	"	measles,
2,283	"	whooping-cough,
1,048	"	diphtheria,
675	"	scarlet fever,
491	"	"fever,"
0	"	small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 10,620 deaths were referred last quarter, being in the proportion of 1·21 per 1000 of the estimated population, or 2·04 per 1000 below the average proportion in the corresponding quarters of the previous ten years.

The rate of mortality from measles and whooping-cough last quarter slightly exceeded the decennial averages, whilst the rates from each of the other diseases were below the respective averages.

Diarrhœa was the assigned cause of 3,811 deaths last quarter, equal to an annual mortality of 0·43 per 1000, which is lower by 1·88 per 1000 than the decennial average rate for the third quarter of the year. In Herefordshire no deaths from diarrhœa were returned last quarter. Among counties with populations exceeding 100,000 persons the highest death-rates from this disease were 0·55 per 1,000 in Essex and in the East Riding of Yorkshire, 0·60 in Nottinghamshire, 0·65 in Lancashire, 0·66 in Warwickshire, and 0·74 in the West Riding of Yorkshire. In the 76 great towns the average death-rate from diarrhœa was 0·58 per 1000; the rate was highest in the following towns:—Walsall 1·21 per 1000, Wigan 1·27, Rotherham 1·41, Sheffield 1·95, and Bootle 2·21. In the 142 smaller towns diarrhœa was fatal on the average to 0·42 per 1000 of the population, and caused the highest mortality in Bilston, Barking Town, Barnsley, Batley, and Ince in Makerfield. In the remainder of England and Wales the death-rate from diarrhœa averaged 0·27 per 1000. Among registration sub-districts outside the 218 chief towns diarrhœa was exceptionally fatal in Lowton.

In accordance with precedent, special tables relating to summer mortality from diarrhœa have been inserted in the present Return (*see* Tables XIII.—XV.).

Measles was returned as the cause of 2,312 deaths, corresponding to an annual rate of 0·26 per 1000 of the population, or 0·01 per 1000 above the average rate in the third quarters of the preceding ten years. Of the 55 registration counties, 9 were free from measles fatality throughout the quarter. Among counties with populations of more than 100,000, the highest death-rates from this disease per 1000 of the respective populations were 0·50 in Durham, 0·70 in Staffordshire, 0·75 in the North Riding of Yorkshire, and 0·83 in Glamorganshire. In the 76 great towns measles caused an average mortality of 0·29 per 1000. In 13 of these towns no deaths from this disease were registered during the quarter. The highest death-rates were 0·84 per 1,000 in Merthyr Tydfil, 0·86 in Blackburn, 1·36 in Stockton on Tees, 1·47 in Derby, 2·09 in Walsall, and 2·67 in Cardiff. In the 142 smaller towns, measles was fatal on the average to 0·30 annually per 1000 living, and

among these towns showed exceptional fatality in Winchester, Shrewsbury, Dudley, Ebbw Vale, Bilston, and Oldbury. In the remainder of England and Wales the average measles death-rate was 0·22 per 1000. Among registration sub-districts outside the 218 chief towns, measles was especially fatal in Tewkesbury, Pleasley, Thornaby, and Maesteg.

Whooping-cough accounted last quarter for 2,283 deaths, equal to a death-rate of 0·26 per 1000 annually, which is above the average rate in the ten previous corresponding quarters by 0·02 per 1000. In five of the counties of England and Wales no deaths from this disease were registered; among counties with populations exceeding 100,000, the death-rate was 0·33 per 1,000 in Essex, 0·35 in Cheshire and in Durham, 0·37 in the West Riding of Yorkshire, 0·38 in Lancashire, and 0·46 in Northumberland. In the 76 great towns, whooping-cough caused an average death-rate of 0·31 per 1000 living. Three of these towns were free from whooping-cough mortality throughout the quarter, but the death-rate was equal to 0·64 per 1,000 in Stockport, 0·73 in Gateshead, 0·81 in Tynemouth, 0·86 in Wigan, 0·87 in St. Helens, and 0·91 in Great Yarmouth. In the 142 smaller towns, the average death-rate from whooping-cough was 0·28 per 1000, the disease being especially fatal in Leigh (Lancs), Macclesfield, Southend on Sea, Brighouse, Widnes, and Felling. In the remainder of England and Wales, whooping-cough caused an average mortality of 0·20 per 1000 annually. Among registration sub-districts outside the 218 chief towns, whooping-cough was exceptionally fatal in Teynham, Tutbury, and Atherton.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,048 deaths, a number corresponding to an annual rate of 0·12 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·07 per 1000. Seven of the counties were entirely free from fatal diphtheria throughout the quarter. Among counties with populations exceeding 100,000 the highest death-rates from this disease were 0·17 in Bedfordshire, in Essex, in Norfolk, in Gloucestershire, and in Derbyshire, and 0·27 in the North Riding of Yorkshire. The average death-rate from diphtheria in the 76 great towns was equal to 0·13 per 1000 of their aggregate population. No death from this disease occurred in six of these towns. The great towns in which diphtheria showed the highest fatality were the following:—Gateshead, where the rate was equal to 0·26 per 1,000 annually, West Ham 0·27, Derby 0·29, Middlesbrough 0·35, Tynemouth 0·37, and Norwich 0·40. In the 142 smaller towns the mortality from this disease averaged 0·10 per 1000, the rate being highest in Ealing, Poole, Chester, and Tunstall. In the remainder of England and Wales, diphtheria was fatal in the average proportion of 0·12 per 1000 living. Among registration sub-districts outside the 218 chief towns, diphtheria was especially fatal in Kirkburton.

Scarlet fever accounted last quarter for the deaths of 675 persons, corresponding to a death-rate of 0·08 per 1000 living, or 0·03 per 1000 less than the decennial average rate for the third quarter. Twelve of the counties of England and Wales were free from scarlet fever mortality. Among counties with populations exceeding 100,000, the highest death-rates were 0·12 in Lincolnshire, 0·13 in Staffordshire and in Warwickshire, 0·14 in London, and 0·19 in Middlesex. In the 76 great towns scarlet fever accounted for an average mortality of 0·11 per 1000 annually. No deaths from this disease were recorded in fifteen of these towns. The highest scarlet fever death-rates were 0·20 per 1000 in Leyton, 0·22 in Salford, 0·28 in Wolverhampton and in Sunderland, 0·29 in Warrington, and 0·41 in West Bromwich. In the 142 smaller towns scarlet fever was fatal in the average proportion of 0·06 per 1000 living, and caused the highest

mortality in Enfield, Ashton under Lyne, Oldbury, and Lincoln. In the remainder of England and Wales this disease caused an average death-rate of 0·05 per 1000 living. Among registration sub-districts outside the 218 chief towns, scarlet fever was exceptionally fatal in Newport (Salop) and in Sandbach.

“*Fever*” (including the three chief forms—*typhus*, *enteric fever*, and ‘*pyrexia*’ of uncertain origin) was the registered cause of 491 deaths last quarter, equal to an annual death-rate of 0·06 per 1000 of the population, or 0·08 per 1000 less than the average rate in the third quarters of the previous ten years. In five counties no deaths from fever were returned last quarter; among counties with populations exceeding 100,000, the highest death-rates were 0·08 per 1000 in Cheshire, 0·09 in Hampshire, in Derbyshire, and in Lancashire, and 0·10 in Monmouthshire. In the 76 great towns fever caused an average mortality of 0·05 per 1000 annually. In nineteen of these great towns no deaths from fever occurred; the towns with the highest fever death-rates were Burnley, where the rate was equal to 0·19 per 1000, Bolton 0·20, Rhondda 0·22, West Bromwich 0·23, and Bootle 0·36. In the 142 smaller towns fever caused an average mortality of 0·05 per 1000 annually, the mortality being highest in Ince in Makerfield. In the remainder of England and Wales, the death-rate from fever averaged 0·06 per 1000. Among registration sub-districts outside the 218 chief towns, fever was especially fatal in Amesbury, Runcorn, and Atherton.

No death from *Small-pox* was registered last quarter in any part of England or of Wales. The deaths in the four quarters immediately preceding numbered 5, 12, 4, and 5, respectively.

Violent Deaths.

The deaths in England and Wales that were referred to different forms of violence, either accidental or otherwise, numbered 4,844 last quarter, and corresponded to an annual rate of 0·55 per 1000 of the population, against an average of 0·60 in the ten preceding third quarters. In registration counties with populations exceeding 100,000, the lowest death-rates from violence were 0·30 in Bedfordshire, 0·34 in Wiltshire, 0·36 in Middlesex, 0·37 in Sussex, 0·40 in Essex, 0·41 in Denbighshire, and 0·42 in Hertfordshire and in Leicestershire; the highest rates were 0·64 in Oxfordshire, 0·65 in Somersetshire, 0·67 in the East Riding of Yorkshire and in Durham, 0·68 in Nottinghamshire, and 0·74 in Glamorganshire. In the 76 great towns the mean rate was 0·52 per 1000 living; among the several towns the rate was only 0·11 in West Hartlepool, 0·12 in Bournemouth, and 0·13 in Hornsey; but it rose to 0·75 in Walsall and in Nottingham, 0·76 in Great Yarmouth, 0·77 in Burnley, 0·78 in St. Helens, 0·83 in Hull, and 1·21 in Merthyr Tydfil.

Certification of Causes of Death.

Of the 106,499 deaths registered in England and Wales last quarter, the causes of 96,867, or 90·9 per cent., were certified by registered medical practitioners, and the causes of 8,184, or 7·7 per cent., by coroners after inquest; whilst the causes of the remaining 1,448, or 1·4 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding third quarters having been 1·5 per cent. Among registration counties with populations exceeding 100,000, the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Middlesex, Buckinghamshire, Wiltshire, Gloucestershire, Cheshire, the East and North Ridings of

Yorkshire, and Glamorganshire, but it reached 2·4 in Bedfordshire, 2·5 in Northamptonshire, 2·6 in Derbyshire and in Durham, 2·7 in Kent, 3·0 in Carnarvonshire, and 3·5 in Berkshire. In the 76 great towns the mean proportion of uncertified deaths was 1·0 per cent. ; but whilst no uncertified deaths were registered in Croydon, Willesden, Hornsey, Tottenham, West Ham, Leyton, Walthamstow, Brighton, Southampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Wolverhampton, Derby, Birkenhead, Wigan, York, or Tynemouth, the proportion per cent. rose to 3·5 in Warrington, 4·0 in Barrow in Furness and in Gateshead, 4·2 in Reading, 4·7 in Rotherham, and 4·8 in South Shields.

Inquests.

Inquests were held in England and Wales concerning 8,184, or 7·7 per cent., of the total deaths, the mean proportion in the ten preceding third quarters having been 6·4 per cent. In the 76 great towns the proportion of inquest cases averaged 8·3 per cent., ranging from 3·0 in Bournemouth, 3·1 in West Hartlepool, 3·3 in Preston, and 3·4 in Barrow in Furness, to 12·0 in Merthyr Tydfil, 12·3 in Walthamstow, 13·2 in Ipswich, and 13·3 in Southampton.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 20,850, or 19·6 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding third quarters having been 14·6 per cent. In the 76 great towns the deaths in public institutions averaged 26·4 per cent. of the total deaths, the lowest percentages in the several towns being 3·9 in Rhondda, 8·4 in Gateshead, 9·2 in Kings Norton, 9·3 in Wigan, and 9·5 in Aston Manor ; the highest percentages being 30·3 in West Ham and in Wolverhampton, 32·6 in Liverpool, and 41·0 in London.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual birth- and death-rates per 1000 living in these towns last quarter were as follows :—

	Birth-rate.	Death-rate.
Edinburgh	21·0	13·4
Glasgow... ..	27·7	14·4
Dublin	28·9	18·7
Belfast	29·7	16·0

COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 27 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the past

quarter (Table XVI.). Excluding the Indian cities, the highest and lowest annual birth- and death-rates during the third quarter of 1907 were as follows :—

BIRTH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Trieste	32·3	Brussels	17·2
Bucharest	29·8	Paris	18·4
Breslau	29·6	Prague	20·1
New York	29·6	Antwerp	22·7
Copenhagen	27·4	Vienna	23·0
Munich	26·8	Berlin	23·7
		London	25·2

DEATH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Moscow	32·7	Amsterdam	10·6
Bucharest	24·1	Brussels	11·6
Trieste	23·0	Antwerp	11·7
St. Petersburg	21·9	Hamburg	11·7
Breslau	21·4	Stockholm	11·9
New Orleans	21·0	Christiania	11·9
		London	11·5

Small-pox caused 29 deaths in Rio de Janeiro, 28 in Vienna, 19 in Paris, 7 in Moscow, 2 in St. Petersburg and in New Orleans, and 1 each in Antwerp in Venice and in New York.

Measles was most fatal, in proportion to population, in St. Petersburg, Moscow, Amsterdam, and Berlin; *scarlet fever* in St. Petersburg, Bucharest, Toronto, Moscow, and Chicago; *diphtheria* in St. Petersburg, Toronto, Christiania, New York, and Moscow; *whooping-cough* in Breslau, Trieste, New Orleans, Copenhagen, and Berlin; “*fever*” in New Orleans and St. Petersburg; and *diarrhæal diseases* in Moscow, Bucharest, St. Petersburg, Trieste, and New York. One death from *Asiatic cholera* was registered in Moscow.

Infantile Mortality.—Among those cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 72 in Christiania, 74 in Stockholm, 75 in Amsterdam, and 95 in Copenhagen, to 204 in New York, 207 in Munich, 242 in Trieste, 263 in Breslau, and 269 in Bucharest.

INDIAN CITIES.—The death-rate was equal to 41·1 per 1000 in Madras, 34·9 in Bombay, and 23·0 in Calcutta. *Small-pox* caused 38 deaths in Calcutta, 10 in Madras, and 8 in Bombay; *measles* caused 28 deaths in Madras, 23 in Bombay, and 14 in Calcutta. Under the heading "*fever*" 1718 deaths were returned in Calcutta, 1432 in Madras, and 1011 in Bombay, including 118 deaths in Calcutta and 254 in Bombay from *plague*. The mortality from *diarrhæal diseases* was excessive in all of these Indian cities; *Asiatic cholera* caused 417 deaths in Calcutta, 350 in Bombay, and 415 in Madras.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the third quarter of the year 1907 (*see* pages xxvii—xxxii); and in the two following Tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxiii—xxxviii).

TABLES.

TABLE I.—**Marriages, Births, and Deaths** registered in **England and Wales** in the Years **1897-1907**, and in each Quarter of those Years.

TABLE V.—76 Great Towns.—Population: Births, Deaths, and Meteorology in the 13 Weeks ended 28th September, 1907.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.). The deaths in the other towns have been corrected, as far as possible, for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong.

* Excluding deaths of persons admitted into public institutions from without the boundaries of Dublin and Belfast respectively. † Including 13 deaths from Epidemic Cerebro-spinal meningitis or Cerebro-spinal fever in Greater London, of which 10 were registered in London and 3 in the Outer Ring. ‡ Corcha-
 § Phoenix Park. * Fitzwilliam Square.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The death-rate in London has been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The death-rates in the other Towns have been corrected for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong. In the deaths excluded from London previous to 1800, only those which occurred in the London Fever Hospital, the Metropolitan Asylums Hospitals, and the Middlesex County Lunatic Asylum were added to the several parts of the Outer Ring.

TABLE VII.—One hundred and forty-two smaller Towns.—Population; Births and Deaths in the QUARTER ended 30th September, 1907.

NOTE.—The 142 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 at the Census of 1901. The deaths in these towns have been corrected for deaths occurring in Public Institutions, while in addition the deaths occurring in London of all persons known to belong to towns in the Metropolitan Outer Ring have been credited to the several towns to which they belong.

The Registration Districts, 634 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

^a See page 2, note ^b.

^b For London, the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrars.

II.—SOUTH EASTERN COUNTIES.—REGISTRATION DISTRICTS.

* The Registration Sub-districts (2029 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; w indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; F a Hospital for Infectious Diseases; H another Hospital; and L a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

b See page 2, note b.

c See page 8, note b.

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING THE
QUARTER ENDED SEPTEMBER 30TH, 1907.

EXTRACTED FROM THE
MONTHLY WEATHER REPORTS
OF THE
METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 170 STATIONS,
TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 58 STATIONS
IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

JULY, 1907.

General Summary.—The abnormal weather conditions which were almost uninterruptedly prolonged through the three consecutive months, April to June, were somewhat less persistently maintained in the period now under review. During July there was one striking modification in the distribution of atmospheric pressure, which served to render the month much less disturbed than any of its three predecessors. On the whole the regions of highest barometer readings were found, as previously, in the neighbourhood of the Arctic Circle on the one side, and over south-western Europe and thence outwards towards mid-Atlantic on the other, but there was one period of twelve days, the 10th to the 21st, when the British Isles were almost continuously covered by an extensive system of high pressure. One result of this was the very great reduction in the number of cyclonic depressions which arrived on our coasts from the Atlantic, only half-a-dozen instances in all. They were of moderate to slight depth, and possessed of very little wind energy, so that it was not necessary to hoist the storm cones throughout the month, fresh to strong breezes being usually the greatest force reported, a few cases of the force of a high wind being felt at some of the more exposed situations on the coast. The anemometrical records show no hourly velocity equivalent to a gale. It was during the anticyclonic period referred to that the only hot weather of the month—practically of the whole season—occurred, the highest temperatures being registered between the 14th and 22nd, mainly at stations in Ireland and Scotland, very few places in the eastern half of England attaining a maximum of 80°. The rest of the month was characterised by a distinct tendency for the afternoon temperatures to be several degrees below the summer normal. As was the case in the preceding month, there was again a very notable absence of those heavy rains of tropical intensity which are fairly common at this time of the year under more normal conditions of weather. There were a few isolated instances of very heavy showers of brief duration—on the 6th, at Epsom, 0·2 in. fell in five minutes; on the 10th, at Birmingham, 0·54 in. in an hour; and on the 30th, at Nottingham, 0·58 in. in fifteen minutes. But the only exceptionally large general downpours occurred with the severe thunderstorms which marked the close of the anticyclonic fine weather spell. On the 21st, at Bath, 2·6 ins. fell in three hours, at Llangammarch Wells, 1·75 in. in two hours twenty minutes, at Rochford, Worcester, 1·61 in. in half an hour; on the 22nd, at Cirencester, 1·28 in. in two and a half hours, and at Llangammarch Wells, 1·10 in. in forty-five minutes, very large amounts being reported also over North Middlesex on this day.

Thunderstorms, or thunder or lightning alone, occurred on twenty-four days, the most extensive being over northern England on the 1st, eastern England on the 2nd, England generally on the 4th, northern England on the 5th, the southern half of England on the 10th, Ireland on the 18th, 19th, and 20th, and England, Wales, and many parts of Ireland on the 21st and 22nd. Those of the 21st and 22nd appear to have been of extraordinary violence in many neighbourhoods, especially over the region between central Wales and Gloucestershire, where, in addition to a tremendous torrent of rain, there were unusually severe hailstorms, which occasioned considerable damage. Hail fell on several other days, mostly accompanying thunderstorms, a remarkably heavy fall being reported at Cirencester on the 4th. At Belvoir Castle thunderstorms occurred on six days, and at Garforth and Dublin City on five days.

From the 12th to the 28th a great deal of thick foggy weather was experienced along the coasts—north, west, south, and east—but during the rest of the month there were hardly any reports of fog.

For the month as a whole pressure was in excess of the normal; temperature was nearly everywhere deficient; the winds varied greatly in direction; rainfall was less than usual, except at various stations in the western districts; and the duration of bright sunshine was in excess over the western half of the kingdom, in defect over the eastern districts.

Pressure.—*Mean* at 8 a.m. ranged from 30·09 ins. at Jersey, and above 30·05 ins. over the south of England to below 29·95 ins. in the north-east of Scotland, 29·92 ins. at Sumburgh Head. The general distribution of mean pressure differed somewhat from the normal, the most notable variation being the shifting of the region of minimum values from beyond our north-western coasts to a position to the eastward and north-eastward of Shetland and on to the Norwegian coast, a change which accounts for the large proportion of winds from Polar directions during the period. At all stations the results for the month were above the average, by 0·06 in. at Scilly and in London, and by more than 0·1 in. over the northern half of Scotland, nearly 0·15 in. in the Hebrides. *Highest* readings, rather above 30·5 ins., occurred on the 11th, 30·55 ins. at Valencia, and 30·56 ins. at Roche's Point, and on the 15th and 16th, 30·55 ins. at Stornoway on the latter date. *Lowest* readings, which were in most cases only a little below 29·5 ins., were observed on the 4th and 5th, 29·33 ins. being recorded at Sumburgh Head on the morning of the 5th. *Range* consequently was only moderate, and it was also fairly uniform, amounting to about 0·8 in. in the south-east of England and in the Channel Islands, and slightly exceeding an inch generally over the western and northern districts.

Depressions.—Compared with the immediately preceding months there was a very considerable decrease in the frequency of disturbances passing over or near the British Isles. On the morning of the 2nd the Iceland reports indicated the existence of a depression far out on the Atlantic, and by the afternoon it had already caused the wind to back Southerly on our western coasts. The minimum of pressure was near the north-west coast of Ireland by the morning of the 3rd, but the subsequent behaviour of the system was erratic, at first lingering over northern Ireland, then in the vicinity of Shetland, and finally disappearing off the Norwegian coast on the 7th. It occasioned a North-Easterly gale in the Færøe on the 5th, but over these islands the pressure gradient was not sufficient to produce much wind anywhere. There were slight indications of the approach of a depression towards our north-western coasts on the evening of the 7th, and next morning the minimum of pressure had arrived near Ben Nevis, then passed Aberdeen and up the Norwegian coast, disappearing on the 10th. It was deepest on its first appearance, but the barometer did not touch 29·5 ins. On the morning of the 11th a shallow disturbance was found over eastern Iceland. Two days later it was beyond our north-western coasts, but the British Isles were at this time covered by a high pressure system, and the depression changing its course to the westward passed out to the Atlantic, having occasioned rainy weather over our north-western and western districts. When the anticyclone took up a more northerly position in the Færøe-Iceland region, a shallow disturbance appeared near Ireland on the 22nd, and until the morning of the 25th it was indicated off our south-western coasts, moved into the English Channel on the evening of the 25th and then disappeared. On the 26th and 29th disturbances appeared beyond Ireland, and advancing on a general north-easterly path they passed across Scotland and Scandinavia. The former remained uniform in depth during its progress, but the latter became considerably deeper as it advanced, and on its arrival in Sweden the barometer was as low as 29·1 ins. at Stockholm, with the wind at several places beyond the North Sea becoming strong to a gale in force.

Anticyclones.—During the earlier and later portions of the month the regions of highest pressure were situated mainly about Iceland, Spain, and eastern Europe, but on the 10th a decided increase of pressure spread in upon us from the south-westward, and thenceforward, until the 21st, a well-marked high pressure system was in the ascendant over the country, the barometer rising a little above 30·5 ins. in many localities on the 11th, 15th, and 16th.

Winds.—Associated with the almost equal prevalence of high and of low pressure areas the winds varied greatly in direction, all quarters of the compass being represented, the balance being in favour of points in the northern half. At no station was the force of a gale recorded.

Temperature.—*Mean at sea level* ranged from between 60° and 62° at Jersey and Scilly and at several stations in the southern parts of England and Ireland to below 54° in the north of Scotland, to 51° at Sumburgh Head. The general distribution of the sea level temperatures was similar to the normal, but the actual values were in nearly every instance below the average, there being numerous cases of the deficiency being more than 4°, Belvoir Castle and Cambridge exceeding 5°, while Hillington was as much as 6·2° lower than usual. The only cases of an excess were in Ireland, Markree Castle, Killarney, and Foynes. *Highest* readings were recorded between the 15th and the 20th, except in the extreme east of England, where they occurred between the 26th and the 29th, 86° at Lairg (16th), 85° at Dumfries (16th and 17th) and Killarney (18th), 84° at Crieff (17th), and 83° at Balruddery (16th), Stokesay (18th) and Salisbury (20th). The maxima over eastern England towards the close of the month were much lower than these, most of the records being below 75°, Hull being the only station where a reading of 76° was reached. But it is obvious from the fact of the mean values being so much below the normal that the high maxima were of very short duration. Low afternoon readings were the most striking features of the month. Temperatures as high as 70° were the exception, and very frequently the thermometer failed to touch 60° over a great part of the kingdom. Even in the extreme south of England many places rarely rose to 60° in the first part of the month. Some stations in Scotland occasionally failed to pass above 50°, and on the 5th Lairg had a maximum of only 49°. *Lowest* night readings occurred on very varied dates, but mainly about the 11th—in England, 33° at Wokingham, and 34° at Garforth and Llan-gammarch Wells; in Scotland, 36° at Cally and Fort Augustus; and in Ireland, 37° at

Markree Castle, Phoenix Park, and Clongowes Wood College, with the exception of Fort Augustus (24th) all on the 11th. While as a general rule the nights were cool, there were occasions when the minimum temperature was considerably above the usual level. Readings as high as 60° and 61° were fairly common in many districts about the middle and towards the close of the month. A minimum of 62° was registered at Glasgow (on the morning of the 15th), 63° at Kilkenny (15th) and Aberdovy (21st), and 65° at Dublin City (18th). *Range* was generally considerable, exceeding 40° in many localities, amounting to 45° at Lairg, Balruddery, Cally, Marlborough, Wokingham, and Llangammarch Wells, and 46° at Killarney, but at Scilly it was only 18°, and at Sumburgh Head 17°. *Vapour Pressure* ranged from 0·316 in. at Deerness (9 p.m.) to 0·455 in. at Tottenham (9 p.m.). *Relative Humidity* ranged from 64 per cent. at Westminster (6 p.m.) to 94 per cent. at Tottenham (9 p.m.). *Nocturnal Radiation Temperature* (on grass) fell below 30° at only a very few stations, on the morning of the 11th to 27° at Maidenhead and Llangammarch Wells, 28·5° at Coventry, and 29° at Markree Castle. There were not many records as low as 32°. *Mean Earth Temperature* at 1 ft. depth ranged from 53·8° at Birmingham to 62·9° at Southport and Salisbury; and at 4 ft. depth from 50·8° at Birmingham to 59·6° at Southport.

Rainfall.—The month's precipitation was less than the average over nearly the whole country, the deficiency being considerable as a rule, amounting to 2 ins. at Scarborough, 2·1 ins. at Valencia, 2·2 ins. at Aspatria, 2·4 ins. at Laudale, and 2·9 ins. at Fort William. The places which received more than the usual amount were mainly within the region of the heaviest falls in the violent thunderstorms of the 21st and 22nd. In most cases, however, the excess was small, but at Oxford it was 0·8 in., at Cirencester 1·1 in., at Birr Castle 1·9 in., and at Bath 2·1 ins. The largest aggregate amounts for the month were 5·7 ins. at Llangammarch Wells, 4·9 ins. at Birr Castle, 4·8 ins. at Bath, and 4·2 ins. at Glencarron; the smallest 0·9 in. at Bognor, Brighton, and Lowestoft, 0·8 in. at Spurn Head, and 0·6 in. at Scarborough. Falls of more than an inch in a day were not numerous for the time of year. On the 10th, Broadstairs, 1·2 in., on the 21st, Forest of Dean (200 ft.), Marlborough, and Hawarden Bridge 1·1 in., Cheadle and Rhyl 1·1 in., Llangammarch Wells 1·8 in., Rochford 1·9 in., Bath—Henrietta Park 2·7 ins., Statutory Hospital, 2½ miles south-east, 1·3 in., Combe Park, 2 miles west, 2·9 ins.; on the 22nd, Barnet and Llangammarch Wells 1·1 in., Cirencester and Oxford 1·3 in., Tottenham and Llandovery 1·5 in.; on the 23rd, Falmouth 1·2 in.; and on the 24th, Ballinacurra and Roche's Point 1·3 in. The days on which precipitation was measured were by no means numerous, 21 at Birr Castle and Manchester (Whitworth Park), and 20 at Harrogate, Manchester City, and Llangammarch Wells, while along the south and east coasts of England, from Portland Bill to Whitby, a number of stations returned only 9 or 10 days with rain, and inland, Wokingham had 10 days.

Bright Sunshine.—In the matter of sunshine the country was divided roughly into two parts, the western half being favoured with much brightness, the eastern half having to be content with much less than the average. Various western stations had an excess of from one to more than two hours per day, Pembroke exceeding the average by 61 hours, Tenby by 63 hours, and Valencia by 67 hours. The loss at many places in the east was more than an hour per day, the deficiency at Hillington amounting to 42 hours, Rothamsted 44 hours, Cambridge 48 hours, and Greenwich and Marchmont 54 hours. The largest aggregate totals for the month were 272 hours (55 per cent. of the possible) at Tenby, 268 hours (56 per cent.) at Guernsey (Brooklyn), 267 hours (54 per cent.) at Pembroke, and 263 hours (54 per cent.) at Guernsey (Villa Carey), the smallest totals, 109 (21 per cent.) at Newcastle on Tyne, 108 hours (21 per cent.) at Crathes, 103 hours (19 per cent.) at Deerness, and 92 hours (17 per cent.) at Balta Sound. The morning cloudiness (overcast sky=10) ranged from 5·1 at Hastings to 9·5 at Sumburgh Head; the evening cloudiness from 3·9 at Falmouth to 8·5 at Sumburgh Head and Durham. Fog was reported on 5 days at Nairn and Malin Head, 6 at Holyhead, Pembroke, and Falmouth, and 8 at Deerness and Donaghadee.

Earthquake.—According to newspaper reports a slight earthquake shock was experienced at Wallasey, Cheshire, on the 2nd; and three shocks in the Dochgarroch district of Invernesshire on the 29th.

AUGUST, 1907.

General Summary.—The cool changeable weather which was so widely prevalent in June and July continued throughout nearly the whole of August. In the course of the month, however, the distribution of barometrical pressure over western Europe and the neighbouring parts of the ocean underwent a gradual change. In the earlier part of the summer two anticyclonic areas were usually in existence—one over and to the northward of Iceland, the other over the southern portions of the North Atlantic. The space between these two systems was occupied by an extensive area of low pressure, which frequently extended eastward over these Islands and in some cases over nearly all the more western parts of the continent. During the earlier part of August the complex type of weather resulting from so irregular a combination was still in existence. Later on the high pressure system in the Icelandic region gradually disappeared, while the Southern Atlantic anticyclone extended its borders over France, and occasionally over the southern parts of the United Kingdom. The conditions, therefore, though still unsettled, assumed a more normal and regular type, and over a large

portion of England the proximity of the southern anticyclone resulted in a partial improvement in the weather, the showers being interspersed with fair intervals of considerable duration. In all the more western and northern districts, however, the weather remained under the influence of numerous depressions, some of which appeared directly over Scotland, while others moved on a more northerly track outside our extreme north-western and northern coasts and on to Scandinavia and northern Russia. In not a few instances these disturbances were of sufficient depth to occasion a rather steep barometrical gradient over Ireland and England, and on our western and southern coasts the South-Westerly and Westerly wind was, therefore, often very strong in force. As rain producers the shallower depressions were not less effective, the result being that very few places in Ireland and Scotland experienced less than 25 days with rain, while along our Atlantic seaboard the number increased to at least 27 or 28. The South-Westerly and Westerly winds which were so general seem to have been effectually chilled in the course of their passage across the ocean, and reached our western districts in the form of cool summer breezes. During their subsequent progress across the land, however, they received a large accession of warmth, and as a result there were not a few instances in which the mid day temperatures along the east coast of England were as high, or higher, than in any other part of the kingdom. In all parts of the kingdom, however, the absence of anything in the way of normal summer heat was as noticeable as in the earlier summer months.

Thunderstorms, or thunder or lightning alone, occurred on 22 days, but as a rule they were of a very sporadic character, on many days being reported only in one or two widely separated parts of the kingdom. The most extensive were those of the 6th, 14th, 15th, 19th, and 20th, which affected many localities in the inland and eastern districts of England. On the 11th several places in Ireland were visited. But even these more widely experienced storms were not marked by anything like the violence which is so often a feature at this season of the year. With few exceptions the accompanying rainfall was only moderate to very slight, and occasionally there was a little hail. Dover reported thunderstorms on five days, Belvoir Castle and stations in the London district on four days, and Aberdeen and Dunmow on three days.

A considerable decrease both in the frequency and in the intensity of coast fogs was noticeable, the regions affected being mainly in the west and south, and, other than on the 3rd, 4th, 13th, and 14th, there were very few reports of fog.

Pressure.—Normally in the month of August the *mean pressure* at 8 a.m. over the United Kingdom ranges from about 30·00 ins. in the Channel Islands to 29·80 ins. and less in Shetland and the Hebrides. The difference in pressure between the extreme northern and the extreme southern portions of the country is therefore rather more than 0·2 in., and the trend of the isobars is favourable for winds from South-West and West. In the month under review, the mean values ranged from 30·10 ins. in the Channel Islands to about 29·65 ins. in Shetland. The difference in pressure between the two regions was therefore 0·45 in., or more than twice as much as the normal, and the disposition of the isobars was in favour of winds from the Westward, but inclining in many districts to North-West rather than to South-West. There was a neutral zone running across Ireland and the north of England in which the values agreed very closely with the normal. *Highest* readings were recorded as a rule on the 21st, when the barometer rose above 30·4 ins. on our south-west coasts, above 30·3 ins. in the western and southern parts of the country generally, and above 30·1 ins. in all districts excepting the extreme north of Scotland. In the south of England readings above 30·1 ins. were recorded on several distinct occasions. *Lowest* readings were observed over the country generally on the 14th and 15th, when the barometer fell below 29·7 ins. on all but our extreme south-west coasts, and below 29·5 ins. in most of the northern districts. In the north of Scotland the barometer on the former date fell below 29·3 ins., while in Shetland it fell below 29·1 ins. *Range* for the month agreed very closely with the normal.

Depressions.—In the early part of the month many of the depressions which traversed the northern parts of these Islands dispersed on reaching the Scandinavian peninsula. Two notable exceptions were, however, reported. The disturbance of the 6th–7th was at first of moderate depth, but in the course of its passage across the North Sea it increased in intensity, and on the 7th, when the system moved northward over Sweden, its energy was sufficient to produce gales from the South-Westward and Westward over the Baltic and the south of Scandinavia. The second instance occurred on the 15th–16th. In this case the centre of the disturbance advanced in an easterly direction across the northern parts of Ireland and England, the system being at the time of little importance. During its subsequent progress north-eastward, however, it developed quickly, and on the morning of the 16th, when the centre lay over the Christiania Fjord, a gale from various (cyclonic) directions was experienced over nearly the whole of Denmark and the south of Scandinavia. After the 20th, when the Icelandic high pressure area gave way, the Atlantic depressions pursued a more northerly track than hitherto, the centres travelling in most instances from the neighbourhood of Iceland to the north of Scandinavia. On the 28th, however, a disturbance advanced further south, in much the same latitude as those observed earlier in the month, and it was sufficiently deep to produce very strong winds from the South-Westward on our north-west coasts, with a gale at Malin Head.

Anticyclones.—The anticyclones observed in our neighbourhood originated mainly in the easterly extension of the high pressure area which occupied the southern portions of the North Atlantic. This system spread rather frequently over the Bay of Biscay and France, and

occasionally further north over the southern and eastern portions of our own Islands. Between the 19th and 20th, and again on the 23rd, a further extension was observed, the system embracing, temporarily, nearly the whole of the United Kingdom. On the 27th a detached portion of the Atlantic anticyclone drifted eastward across the south of these Islands and the north of France to central and eastern Europe, while at the close of the month a large area of high pressure was beginning to spread southward from Iceland towards our own extreme western coasts. The weather reports for the opening of September showed, however, that the latter movement was of a purely temporary character.

Winds.—In accordance with the distribution of mean pressure the winds were mainly from some Westerly quarter (between South-West and North-West). Over northern and central England the preponderance of such currents was very marked. At North Shields 48 per cent. of all the 8 a.m. and 6 p.m. winds blew from the South-Westward, and 20 per cent. from the Westward; while at Nottingham 55 per cent. blew from West, and 32 per cent. from South-West. Although the wind often attained considerable strength, more especially on our western and southern coasts, there were few places which experienced the force of a gale. At Stornoway, however, gale force was attained on five days, and at Malin Head on as many as eight days. The records from the anemometer stations confirm the results obtained by estimation, the only instances of gale force being at Fleetwood on the 7th, when the wind blew with the mean hourly velocity of 44 miles for one hour, and at Deerness on the 14th, when a mean velocity of 45 miles was attained twice in the course of the early morning.

Temperature.—*Mean at sea level* ranged from nearly 62° in the Channel Islands, on the Thames Estuary and in Hampshire, and above 60° generally over the more southern and south-eastern counties of England to below 55° in most parts of Scotland, 52° at Stornoway and Wick, and 50° at Sumburgh Head. The distribution of the sea-level temperatures was in fair agreement with the normal, but the actual values were in almost every instance below the average, the deficiency exceeding 2° at a large number of stations, and amounting to more than 4° at Balmoral and Port William. *Highest readings* were recorded on very varied dates in Scotland, 71° at Lairg (22nd) and 70° at Aberdeen (8th); on the 13th in Ireland, 72° at Kilkenny and 72° to 74° in Dublin; and mainly about the 4th and 29th in England, 81° at Barnet, 79° at Greenwich, 78° at Camden Square, Epsom, Margate, Shoeburyness (4th), Geldeston, Southend-on-Sea, and Southampton (29th). Frequently, however, the afternoon maxima were below 70°, and there were numerous occasions when they failed to reach 60°. At some stations in Scotland and the north of England there were from time to time values below 55°, at Deerness 51° on the 17th and 23rd, at Sumburgh Head 50° on the 23rd, and at Ardross Castle 49° on the 15th. *Lowest night readings* were registered in most parts of the kingdom between the 24th and 30th, 32° at Balmoral (28th), Crathes and Markree Castle (30th), 34° at Barnet (28th), Cally, Cockle Park, and Garforth (30th), 35° at Llangammarch Wells (24th), Marchmont and Clongowes Wood College (30th). There were, in addition, a number of instances of minima between 36° and 39°. There were only a few warm nights, with the minimum temperature as high as 60°. On the morning of the 4th Bath, Maidenhead, and Tottenham, and on the 9th Cambridge, Cromer, Geldeston, and Kingston, Notts, registered 62°; and on the 14th 60° or 61° was recorded at some stations in the south-east of England. *Range* was small generally, but exceeded 35° in some localities, amounting to 38° at Wokingham, 40° at Garforth, and 47° at Barnet. At Epsom, during a thunderstorm, accompanied by a fall of hail, on the evening of the 6th, the thermometer dropped 23° in five hours, from 71° at 4 p.m. to 48° at 9 p.m. Many coast stations had a range of less than 20° for the whole month, 16° at Holyhead, 15° at Pembroke, 14° at Castlebay, and only 12° at Scilly. *Vapour Pressure* ranged from 0.310 in. at Strathpeffer (9 p.m.) to 0.489 in. at Tottenham (9 a.m.). *Relative Humidity* ranged from 71 per cent. at Jersey (6 p.m.) to 94 per cent. at Malin Head (8 a.m.). *Nocturnal Radiation Temperature* (on grass) fell to 30° or below on very few occasions, 29° at Llangammarch Wells on the morning of the 24th; 28° at Woolhampton, 21st; 27° at Crathes, 30th; 26° at Balmoral, 28th and 30th. *Mean Earth Temperature* at 1 ft. depth ranged from 54.5° at Crathes to 63.1° at Southend-on-Sea; and at 4 ft. depth from 52.3° at Aberdeen to 61° at Guernsey.

Rainfall.—The month's precipitation was in excess of the average over the north and west of Scotland, and in the neighbouring parts of the east of Scotland and north-west of England, while over the rest of the kingdom there was nearly everywhere a deficiency. Lauderdale returned an excess of as much as 4.7 ins., Fort William 4.6 ins., and Arlington 2.2 ins. In the region of deficiency the loss in many cases was more than an inch, as much as 1.6 in. at Lowestoft, Falmouth, and Scilly, 1.7 in. at Clifton, and 1.9 in. at Jersey. Several localities returned aggregate totals of more than 5 ins. for the month, Port Talbot 6 ins., Castlebay 6.5 ins., Arlington 7.2 ins., Glencarron 9.1 ins., Fort William 10.6 ins., and Lauderdale 10.7 ins. On the other hand few stations reported less than an inch, Brighton and Portsmouth 0.9 in., Lowestoft and Portland Bill 0.8 in., and Jersey 0.6 in. Considering the time of year, the falls of more than an inch in a day were not numerous. On the 2nd and 3rd there were a few scattered instances in the west and south of Ireland, South Wales, and Devon, 1.9 ins. at Port Talbot on the 3rd, and for the two days 2.2 at Valencia; on the 4th Castlebay 1.2 in.; on the 7th Stonyhurst 1.4 in., and the Penrhyn Quarries 1.5 in. with a further fall of 1.1 in. on the following day; on the 10th Castlebay 1.1 in.; and on the 11th Graythwaite 1.1 in., and Glasgow 1.3 in. The 14th was the only day on which the region of heavy rain embraced a great part of the country, falls of an inch or more occurring at a number of places between South Wales

and the Tyne, the largest records being 1·2 in. at Carnforth, and 1·3 in. at Pant-yr-eos, Mon. Five stations in southern England had over an inch on the 17th, Laudale on the 24th, Crieff, Fort William, and Laudale on the 28th, and the greatest fall of the month was registered on the 29th at Gruline, Argyllshire, 2·1 ins. There appears to have been nothing worthy of remark as regards the intensity of the falls, the only note furnished by the observers being that at Epsom in the early morning of the 18th an inch of rain fell in 5½ hours. There was a very great range in the frequency of precipitation, many western and northern stations recording rain on 25 or more days, Blacksod Point and Malin Head 30, and Glencarron and Kinlochewe 31, while in the east and south of England a considerable number of places had 13 or less, Lowestoft 10, and Portland Bill 7. On the 31st snow showers fell at Kinlochewe.

Bright Sunshine.—Margate, Eastbourne, and Armagh were the only stations where a nominal excess of sunshine was registered; all others returned a deficiency, several being 30 or more hours less than the average, the loss amounting to 49 hours at Marlborough, 53 hours at Valencia, 66 hours at Falmouth, and 78 hours at Scilly. For the whole month records of more than 200 hours, or more than 45 per cent. of the possible duration, were limited to some southern stations, Jersey 217 hours (49 per cent.), Bognor 218 hours (49 per cent.), and Guernsey—Brooklyn 224 hours (51 per cent.), and Villa Carey 228 hours (52 per cent.). In the north Port Augustus had 85 hours, and Deerness 84 hours, both 18 per cent. of the possible. The morning cloudiness (overcast sky = 10) ranged from 5·3 at Eastbourne and Yarmouth to 9·3 at Prestwich and Stonyhurst; the evening cloudiness from 3·4 at Eastbourne to 8·8 at Laudale. Fog was reported on five days at Plymouth, six at Dungeness and Hastings, seven at Falmouth, Roche's Point, and Castlebay, eight at Pembroke, and eleven at Portland Bill.

SEPTEMBER, 1907.

General Summary.—After five consecutive months of dull and rather cold weather, the atmospheric conditions underwent a change of considerable magnitude in the early days of September. A depression of moderate depth crossing the northern districts, and a small shallow secondary crossing the southern districts, occasioned somewhat unsettled weather all over the country during the greater part of the first week, and in most localities a decidedly low temperature for the time of year, the sheltered thermometer falling to and below the freezing point on the mornings of the 3rd and 4th, the frost causing a good deal of damage in places. During this cold period snow showers were experienced on some of the higher grounds in the north of Scotland. By the close of the week, however, the influence of the low pressure systems had ceased, anticyclonic conditions became established, and for more than a fortnight were maintained without any notable modification. The result was a prolonged spell of the finest and driest weather the country has experienced for a long time. Speaking generally, the comparatively wet weather of the opening days came to an end between the 4th and the 7th, and was immediately followed by a period of absolute drought—more than 14 rainless days in succession—over nearly the whole of England and Wales, and in some places in Scotland and Ireland, while in many localities the drought was only interrupted by one or two measurements of 0·01 in., probably the result of dew or damp fogs. At a very large number of stations distributed throughout England and Wales the drought was maintained over at least 20 days, at Portland Bill, Whitmead Park (Gloucestershire), and Bettws-y-Coed 24 days (7th–30th), and at Portsmouth, Bath, Edgehills Lodge, and Dursley (Gloucestershire), Ruthin, Manchester, and Leeds, 25 days (6th–30th). This very dry period was marked by a pleasant and equable temperature, there being relatively few records of abnormally high or low day and night readings. Another feature associated with the drought was the decided increase which took place in the frequency of fog in the inland districts, on some occasions the fog continuing for several hours after sunrise, so that the registered duration of bright sunshine, although as a rule good, was appreciably curtailed in consequence. On the coasts fog was reported at one or more places on as many as 26 days. The most extensive regions affected were the south and east of England on the 12th and 13th; the eastern and western coasts on the 20th and 21st; and nearly all coasts during the greater part of the last week, very dense and persistent in the north and north-east in the closing days.

Towards the end of the month the weather in the north-western, western, and south-western districts was of a somewhat less settled type than in the east, owing to disturbances at some distance from our Atlantic coasts. A slight depression which advanced to the Portuguese coasts on the 23th passed across the peninsula to the south of France and was accompanied by phenomenally heavy rains, and devastating floods over south-western Europe.

With so much fine and dry weather there were only a few reports of the occurrence of thunder or lightning during the month. Thunderstorms, apparently of no great magnitude, were experienced in the north of Ireland and west of Scotland on the 10th; at Kilmarnock on the 11th; at Falmouth, Pembroke, Darwen, and Strathpeffer on the 26th; at Olacton-on-Sea and Dunmow on the 29th; and at Lowestoft on the 30th.

For the month as a whole pressure and temperature were higher than usual throughout the country; the wind was Southerly to Westerly in direction over the northern districts, mainly from between South-East and North-East in the south; there was a well-marked deficiency in the rainfall in all localities; and bright sunshine was deficient over Ireland, but in excess over Great Britain.

Pressure.—*Mean at 8 a.m.* ranged from 30·15 ins. at Oxford and above 30·1 ins. over nearly the whole of England and Wales to less than 30 ins. in the extreme north of Scotland, 29·93 ins. at Sumburgh Head, the gradual diminution being maintained northward to 29·86 ins. in the Færøe and to 29·67 ins. at Seydisfjord (Iceland). In all cases the mean results were well above the average, by 0·10 ins. at Scilly, and about 0·17 ins. at various northern stations between Liverpool and Aberdeen. The excess was thus fairly uniform, so that the distribution of mean pressure did not differ materially from the normal, but with the higher values it was more of an anticyclonic type. *Highest* readings occurred on the 8th, 30·51 ins. at Aberdeen; on the 9th, 30·50 ins. at Nottingham and Oxford; on the 16th, 30·49 ins. at Valencia and Jersey; on the 21st, 30·50 ins. and upwards over Scotland, 30·51 ins. at Aberdeen; and on the 22nd, 30·50 ins. at Nottingham and 30·51 ins. at Shields. *Lowest* values were registered on the 2nd, 29·32 ins. at Leith; on the 5th, 29·37 ins. at Stornoway; on the 25th, 29·45 ins. at Valencia; and on the 27th, 29·46 ins. at Scilly. *Range*, in the absence of any deep disturbances, was moderate, from 0·8 ins. on the Straits of Dover and less than an inch generally over the southern half of England to above 1·2 ins. in the east of Scotland, in Shetland, and the Hebrides.

Depressions.—During such a quiet, fine weather month the British Isles were but rarely affected by cyclonic systems, which in all cases were shallow and produced showery rather than windy conditions. The observations on the evening of the 1st pointed to the existence of a disturbance beyond Ireland, and on the following morning the minimum of pressure was found near the coast of Donegal. Its path of progression was to the north-eastward across Scotland, reaching the Norwegian coast next morning, then taking a more northerly course and disappearing beyond the Arctic Circle. On the 2nd it occasioned a South-Westerly gale at Pembroke, and a strong North-Westerly gale at Malin Head, but few other localities felt as much as a strong breeze. A very shallow disturbance appeared over southern Ireland on the evening of the 3rd, and by next evening it dispersed over western Germany, its advance having been marked by considerable quantities of rain in some localities, but little or no wind. A depression near Iceland on the 6th caused a South-Westerly gale at Stornoway, and another moving eastward near the Arctic Circle on the 16th caused a strong Westerly gale in Caithness and Shetland. A small disturbance which formed on the eastern end of the English Channel in the evening of the 28th produced slight falls of rain locally on both sides of the channel.

Anticyclones.—The month opened with a high-pressure system, barometer at about 30·15 ins., over the south-west quarter of the kingdom, but by the evening of the 1st it had already been transferred to Belgium. For the remainder of the week the regions of highest pressure were found over various parts of the continent, but by the morning of the 8th the area of maximum readings, above 30·4 ins., appeared over the British Isles, and thenceforward down until the 23rd the anticyclone continued in the ascendant in our neighbourhood, its central space sometimes being found on the continent or off our south-western coasts, and on the 20th and 21st, when the highest pressure during the month was reached, above 30·6 ins., it was over the Iceland-Færøe region.

Winds.—In fair agreement with the distribution of pressure the northern half of the country had a decided prevalence of winds from between South and West, with a considerable proportion of North-Westerly breezes in some localities, but over the southern districts, more directly under the influence of the anticyclonic pressure distribution, the direction was much more variable, with North-Easterly to South-Easterly breezes predominating. The days on which the force of a gale was attained numbered 2 at Balmoral, Castlebay, and Malin Head. At no station at which anemometrical records are kept did the hourly velocity throughout the month indicate the force of a gale.

Temperature.—*Mean at sea level* ranged from 62° at Jersey, 61·5° at Guernsey and Newquay, and 60° or a little above at various stations in the more southern counties of England and on the shores of Cardigan Bay, to below 55° over a great part of North Britain, and to less than 50° at Sumburgh Head. The distribution differed somewhat from the normal over Ireland, where the values show a gradual decrease from south-west to north-east, and indicated no cooler area in the inland districts. Over southern England also there were some variations from the usual distribution. With few exceptions the actual values were above the average in all districts, the excess being as a rule considerable, more than 2° at a number of stations, amounting to 2·5° at Armagh, Birr Castle, Markree, and Waterford, 2·7° at Newquay, 3·3° at Barnet and Foynes, and 3·9° at Kilkenny, most of the largest differences being thus found at the Irish stations. *Highest* readings were registered on very varied dates all over the kingdom, comparatively small areas being affected on different days. Jersey attained its maximum, 81°, on the 8th; Ireland had its warmest day on the 9th, when Clongowes Wood and Valencia rose to 77°, and Birr Castle and Foynes to 75°. Over Scotland generally the 10th was warm, with 78° at Nairn, 77° at Balruddery, Crathes, and Strathpeffer, and 76° at Balmoral, while in North Wales Bettws-Coed touched 80°. On the 12th and 13th the highest values were found in the

south and south-east of England, 80° at Barnet (12th), 79° at Fulbeck and Maidenhead, and 78° at Salisbury, Southampton, Tottenham (12th), Geldeston (13th), and other places. The south-eastern counties were again visited by high temperature on the 25th, the highest during the month, 84° at Epsom, 83° at Greenwich, 81° at Barnet and Hillington, 80° at Cambridge, Dunmow, and the various stations within the Metropolis on the north side of the Thames, and 79° at Maidenhead and Norwich. Three days later, on the 28th, there was a decided rise of temperature in the north-western counties of England and of the extreme south of Scotland, Aspatia reporting a maximum of 80°, Dumfries 79°, and at one of the rainfall stations, Graythwaite, Ulverston, 83° was recorded. There were few days on which the afternoon maxima were much below the normal, but on the 3rd Deerness did not pass above 47°, and Sumburgh Head 46°, while on the 21st Sumburgh Head only touched 45°. *Lowest* night values were registered over the northern half of Britain and in Ireland on the morning of the 3rd or 4th, when several localities experienced frost, 30° at Alnwick Castle, Durham, Whitby, Caley, Dumfries, Fort Augustus, and Portalloch, 28° at Newton Rigg and Balmoral, and 26° at Garforth. In the Isle of Man the minimum was 32°, and in Ireland, Clongowes Wood, Phoenix Park, and Kilkenny touched 33°. Over the southern half of Britain the early morning of the 23rd or 24th was the coldest, frost occurring as far south as Lewes and Salisbury. At Barnet the minimum was 30°, at Woburn 29°, and at Wokingham 27°. Between the 5th and the 9th, and again between the 25th and the 28th, many places in southern England had night minima above 59°, as high as 62° at Isleworth (6th), East Ham (7th), Bognor, Portsmouth, and Ventnor (28th), and Manchester registered 63° on the 26th. *Range* was on the whole rather large, in numerous instances exceeding 40°, many 45° and upwards, 49° at Cambridge, Barnet, Dunmow, Woburn, Crathes, and Dumfries, and 52° at Epsom, but at Portland Bill and Guernsey it was 21°, at Falmouth 18°, and at Scilly 13°. *Vapour Pressure* ranged from 0·305 in. at Sumburgh Head (8 a.m.) to 0·458 in. at Roche's Point (6 p.m.). *Relative Humidity* ranged from 74 per cent. at Westminster (6 p.m.) to 97 per cent. at Malin Head (8 a.m.). *Nocturnal Radiation Temperature* (on grass) fell to or below 30° in many places, on the 4th to 21° at Balmoral, 24° at Crathes and Newton Rigg, 26° at Dumfries, Burnley, Whitworth Park, and Llangammarch Wells; on the 23rd to 25° at Greenwich, and 26° at Barnet and Epsom. *Mean Earth-Temperature* at 1 ft. depth ranged from 53·6° at Cockle Park to 62·2° at Southend-on-Sea, and at 4 ft. depth from 51·3° at Aberdeen to 61° at Guernsey.

Rainfall.—With an absolute drought of from 15 to 25 days duration over a large area the month's precipitation was everywhere small, the deficiency in many localities being more than 2 ins., exceeding 4 ins. at Fort William, 5 ins. at Laudale, 5·4 ins. at Glencarron, and at Borrowdale, Seathwaite, the loss was as much as 10·7 ins. Only at a few of the far western and northern stations were there totals exceeding 2 ins., ranging up to 3 ins. at Glencarron and 3·3 ins. at Fort William. At the great majority of stations the amounts were less than an inch, generally between $\frac{1}{2}$ in. and $\frac{3}{4}$ in., the smallest aggregate being 0·3 in. at Hawarden Bridge, Southend-on-Sea, Yarmouth, Lowestoft, and Durham, and 0·2 in. at Llandudno. Heavy falls of an inch or more in a day were naturally very rare, but on the 1st Stornoway had 1·1 in. and Mallaranny 1·4 in.; on the 2nd, Leith and Reccs (Connemara) 1 in.; on the 3rd, Ennistymon (Clare) and Pembroke 1·3 in.; on the 6th, Kinlochewe 1·3 in.; on the 25th, Valencia 1·1 in., and Mount Callan (Clare) 1·5 in.; and on the 26th, Scilly 1 in. and Falmouth 1·2 in. At Epsom on the 30th there was a fall of 0·14 in. in three minutes. Rain was measured at Sumburgh Head on 26 days, at Foynes on 21 days, and at Fort William and Wick on 20 days, but over the country generally on less than 10 days, at several stations on five days, and at Bath, Geldeston, Lowestoft, Southport, and Manchester on four days only.

Bright Sunshine.—At nearly all stations in Britain the duration of bright sunshine was above the average, by 52 hours at Hillington, 53 hours at Marchmont, and 60 hours at Aberdeen. Except Valencia, the Irish stations returned a deficiency, the loss at Phoenix Park being 38 hours. Locally in south-eastern England the duration amounted to between 200 and 208 hours, or to between 53 to 56 per cent. of the possible duration. Markree Castle had only 93 hours, Balta Sound 94 hours, and Trinity College, Dublin, 98 hours. The morning cloudiness (overcast sky = 10) ranged from 3·1 at Marchmont to 9·0 at Prestwich, and the evening cloudiness from 2·2 at Eastbourne to 8·4 at Sumburgh Head. The days on which fog occurred numbered 7 or more at many stations, 10 at Sheffield, 11 at Castlebay and Rothesay, 12 at Belvoir Castle, and 13 at Donaghadee, Greenwich, and Kew.

Aurora.—Auroral displays were witnessed on the evening of the 10th in Scotland and in various parts of England, and on the 11th and 12th in the Hebrides.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

*Prepared in the Meteorological Office under the direction of
W. N. Shaw, LL.D., Sc.D., F.R.S.*

In compiling the following Tables (pp. 82 to 91) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 13.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are included in the Tables. The wind observations at Falmouth and Kew are based on the records of a standard Robinson anemometer (factor 2·2). At Southport the equivalent values are obtained from a Dines Pressure Tube Anemometer. Velocities of between 13 and 38 miles in the hour have been entered in the Tables as strong winds, velocities of 39 miles in the hour, or above, as gales. At the remaining stations the wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking the results.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		3. ENGLAND, S.:—	
Greenwich ..	The Royal Observatory.	Southampton .	A. Vaughan, for Director General of Ordnance Survey.
Kew	The Kew Observatory (National Physical Observatory).	Portsmouth ..	A. Mearns Fraser, M.D., M.O.H., for the Corporation.
Barnet	T. H. Martin, A.M.I.C.E.	Brighton ..	A. Newsholme, M.D., M.O.H., for the Corporation.
Tottenham ..	J. F. Butler-Hogan, M.D., LL.B., for Urban District Council.	Ventnor ..	Miss Gibson, for Royal National Hospital for Consumption.
Camden Square	H. Robert Mill, LL.D., D.Sc.	Portland Bill ..	The Meteorological Office.
Westminster ..	The Meteorological Office.	Eastbourne ..	S. R. Henderson, for the Corporation.
Norwood ..	W. Marriott.	Salisbury ..	Thos. Challis, for the Earl of Pembroke.
2. ENGLAND, CENTRAL:—		4. ENGLAND, E.:—	
Huddersfield	J. Firth.	Cromer ..	W. H. Archer, for Urban District Council.
Sheffield ..	E. Howarth. The Weston Park Museum.	Clacton-on-Sea	A. W. Shadick, for Urban District Council.
Nottingham ..	Arthur Brown, M.Inst.C.E., and Philip Boobbyer, M.D., M.O.H., for the Corporation.	Dunmow ..	Thos. Hacking, The Countess of Warwick's Agricultural School.
Wakefield ..	A. French, M.R.C.S., L.R.C.P.	Cambridge ..	R. Irwin Lynch, M.A. The Botanic Gardens.
Birmingham ..	A. Cresswell, for the Midland Institute Observatory.	Norwich (Eaton.)	A. W. Preston.
Coventry ..	E. Hugh Snell, M.D., M.O.H., for the Corporation.	Bennington ..	Rev. J. D. Parker, LL.D.
Buxton ..	W. Pilkington.	Hillington ..	Rev. H. E. B. Folkes, M.A.
Cheltenham ...	A. C. Saxby, for the Corporation.		
Oxford ..	The Radcliffe Observatory.		
Shrewsbury ..	Capt. W. E. Manser, R.E.		
Stokesay ..	Rev. W. La Touche, B.A.		
Berkhamsted	E. Mawley.		
Belvoir Castle	W. H. Divers, for the Duke of Rutland, K.G.		

Station.	Observer.	Station.	Observer.
5. ENGLAND, N.E.:—		7. ENGLAND, S.W., WITH SOUTH WALES:—	
North Shields	The Meteorological Office.	Plymouth ..	H. Victor Prigg, A.M.I.C.E., for the Corporation.
Spurn Head ..	The Meteorological Office.	Woolacombe ..	B. Fanshawe.
Durham ..	Prof. R. A. Sampson, M.A., F.R.S.	St. Ann's Head, Pembroke.	The Meteorological Office.
York ..	Oxley Grabham, M.A., for Yorkshire Phil. Soc.	Bristol ..	D. Rintoul, M.A. Clifton College.
Hull ..	H. B. Witty, for the Cor- poration.	Falmouth ..	The Meteorological Office.
Lincoln ..	S. R. Moss, for the Cor- poration.	Bath ..	W. H. Symons, M.D., M.O.H., for the Corporation.
Cockle Park .. (near Morpeth).	T. B. Hewetson, for the Northumberland County Council.	Llangammarch Wells.	W. Black Jones, M.D.
6. ENGLAND, N.W., WITH NORTH WALES:—		8. THE CHANNEL:—	
Llandudno ..	W. Little, for the Town Council.	Scilly ..	The Meteorological Office.
Bettws-y-coed	Dr. H. W. Fox, for District Council.	Jersey ..	The Meteorological Office.
Liverpool .. (Bidston.)	W. E. Plummer, M.A. Bid- ston Observatory.	Guernsey ..	Adolphus Collenette.
Aspatia ..	J. Smith Hill, B.Sc. The Agricultural College.		
Manchester ..	J. Niven, M.A., M.B., M.O.H., for the Corporation.		
Southport ..	J. Baxendell, for the Cor- poration.		
Stonyhurst ..	Rev. W. Sidgreaves, S.J. The Observatory.		

DAYS OF "CLEAR SKY" AND "OVERCAST."

A day is reckoned as a day of "clear sky" if the average of the estimates of the fraction of sky covered by cloud at the two hours of observation is less than .2, and as an "overcast" day if the average is greater than .8. At the Royal Observatory, Greenwich, records are kept of days persistently cloudless and days persistently overcast from midnight to midnight. The numbers of such days for the current quarter are :—Clear sky, 0, 0, 0; and Overcast, 0, 0, 1.

Oxford:—The observing hours at Oxford (the Radcliffe Observatory) are 8 a.m., noon and 8 p.m. The results given under Barometer and Hygrometer are the means of the observations at these hours reduced to the means for 9 a.m. and 9 p.m. by corrections deduced from a discussion of the Photographic Continuous Records. (See *Radcliffe Observations*, Vols. XXXIX. to XLV.) The averages used at Oxford are based on observations as follows : Rain, 91 years, 1815–1905; Temperature, 78 years, 1828–1905; Sunshine, 25 years, 1881–1905.

At Greenwich and Oxford the daily rainfall amounts are those for the 24 hours comprising the civil day. At other stations the amounts are those for the 24 hours ending at the time of morning observation; they are entered to the day preceding that of observation.

* The hours of Observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked:—

For all the stations marked a, b, and c, the results under Barometer, Hygrometer and Cloud are based on the morning for districts. For the station marked e, and for Camden Square, where the wind and cloud are not observed at 9 p.m., order to make them more readily comparable with the results for other stations. They, as well as the numbers of days

† The averages used are obtained from observations extending over 35 years, namely:—For Rainfall, 35 years, 1871-1905; Sunshine, 10 years.)

‡ At the Royal Observatory the earth temperature is taken at 3 feet 2 inches below the surface; at this station numbers for the 3rd Quarter, as thus calculated, are respectively Clear Sky 0, 0, 0, and Overcast 0, 0, 1. See Note on page 81

§ See Footnote, p. 81.

* At Oxford the observations are taken at 8 a.m., noon, and 8 p.m., see Note on page 81. At all the other stations the hours of Observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked :—

For all the stations marked a, b, and c, the results under Barometer, Hygrometer and Cloud are based on the morning for districts. For the station marked c, the results for Wind Direction and Number of Observations of Moderate and stations. They, as well as the number of days of "Clear Sky" and "Overcast" at this station, are printed in French

† The averages used are obtained from observations extending over 35 years, namely :—For Rainfall, 35 years, 1871-1905 ;
‡ At Belvoir Castle the earth temperature is taken at 3 feet below the surface.

§ See Footnote p. 81.

Wind Force. —Beaufort Scale (0-12) is used The number of observations of moderate and strong wind (force 4-7).

(a. (Portland Bill) the observing hours are 8 a.m. and 6 p.m. Greenwich time.

(b. (Ventnor) the observing hours are 9 a.m. and 3 p.m. local time.

(c. (Portsmouth) the observing hour is 9 a.m. local time.

Observations only, and these results are in consequence printed in French type. They have not been included in the means Strong wind have been multiplied by 2 in order to make them more readily comparable with the results for other type, but are included in the means for districts.

Temperature, 35 years, 1871-1905; Sunshine, 25 years, 1881-1905.

the number of observations of calm and the number of days of gale are given in the table.

Name of Station, County and Height.	1907.	Baro- meter.	Air Temperature.								Hygrometer.				Earth Tem- pera- ture.		Bright Sunshine.

(St. Ann's Head, Bath, Scilly and Jersey) the observing hours are 8 a.m. and 6 p.m., Greenwich time.

(Llangammarch Wells) the observing hour is 9 a.m. local time.

Observations only, and these results are in consequence printed in French type. They have not been included in the means and have been multiplied by 2 in order to make them more readily comparable with the results for other stations, included in the means for districts.

Temperature, 35 years, 1871-1905; Sunshine, 25 years, 1881-1905.

Number of observations of calm and the number of days of gale are given in the table.

[illegible]

INDEX OF URBAN DISTRICTS

As existing on 30th September, 1907, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked † have been altered since the Census of 1901. The exact constitution of each Urban District and of each Registration Sub-district at the time of the last Census is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,167 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 149 were each co-extensive, at the end of September, 1907, with one or more Registration Areas.

QUARTERLY RETURN
OF
MARRIAGES, BIRTHS, AND DEATHS.
REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF
ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS
DISEASE IN CERTAIN LARGE TOWNS.

~~~~~  
Published by Authority of the Registrar-General.  
~~~~~

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 236.] **Marriages**—*July, August, September, 1907.*
Births and Deaths—*October, November, December, 1907.* [Price 9d.]

*General Register Office, Somerset House,
27th January, 1908.*

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1907 is estimated at 44,104,321 persons; that of England and Wales at 34,945,600, that of Scotland at 4,776,063, and that of Ireland at 4,382,658.

In the United Kingdom 274,031 *births* and 166,662 *deaths* were registered in the three months ended 31st December 1907. The natural increase of population was, therefore, 107,369. The number of *persons married* in the quarter ended 30th September 1907 was 187,154.

The birth-rate in the United Kingdom in the *fourth* quarter of 1907 was 24·7, and the death-rate 15·0, per 1000 of the estimated population. The marriage-rate in the *third* quarter of 1907 was 16·8 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to a Return issued by the Board of Trade it appears that in the three months ended 31st December 1907, the total passenger movement to and from places out of Europe showed a net balance outward of 49,656 passengers, or a decrease of 17 per cent. compared with the number in the corresponding period of the previous year.

The outward balance among persons of British origin amounted to 38,403 persons. Of these 27,030 were English, 3,474 Scottish, and 7,899 Irish. There was also an outward balance of 11,314 persons of foreign origin, and an inward balance of 61 among persons whose nationality was not stated.

Compared with the numbers in the corresponding period of last year the net outward balance of English passengers showed an increase of 19 per cent., that of Scottish a decrease of 20 per cent., and that of Irish an increase of 73 per cent., while that of foreign passengers showed a decrease of 60 per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,029 registration sub-districts of England and Wales in the three months ended 31st December 1907; and the MARRIAGES in 15,651 churches or chapels, in 14,923 registered places of worship unconnected with the Established Church, and in 634 Superintendent Registrars' Offices, in the three months ended 30th September 1907.

Marriages.

In the *third* quarter of 1907 the marriages of 158,106 persons were registered, being equal to an annual rate of 17·9 persons married per 1000 of the estimated population, against an average rate of 17·2 per 1000 in the third quarters of the ten years 1897-1906.

Among registration counties with populations exceeding 100,000, the lowest marriage-rates were 11·2 in Suffolk, 12·7 in Norfolk and in Carnarvonshire, 13·1 in Shropshire, 13·9 in Denbighshire, 14·3 in Kent, 14·6 in Cornwall, and 14·9 in Northamptonshire and in Herefordshire; the highest rates were 18·5 in Bedfordshire, 18·6 in Nottinghamshire and in Durham, 18·7 in Glamorganshire, 18·8 in Middlesex, 18·9 in the West Riding of Yorkshire, 19·6 in Warwickshire, 20·4 in London, 20·5 in Lancashire, and 20·6 in Monmouthshire.

Births.

The births registered in the *fourth* quarter of 1907 numbered 218,855, and were in the proportion of 24·8 annually per 1000 of the population; this is 2·5 per 1000 below the mean birth-rate in the ten preceding fourth quarters, and is the lowest rate recorded in any fourth quarter since civil registration was established. In registration counties with populations exceeding 100,000 the lowest birth-rates during the quarter were 18·9 in Carnarvonshire, 19·1 in Sussex, 19·7 in Northamptonshire, 20·0 in Herefordshire, 20·2 in Devonshire and in Somersetshire, and 20·7 in Oxfordshire and in Cornwall; the highest rates were 27·7 in Northumberland, 27·8 in Carmarthenshire, 28·3 in Staffordshire, 29·3 in Nottinghamshire, 31·2 in Durham, 31·6 in Glamorganshire, and 32·9 in Monmouthshire.

In 76 great towns the birth-rate averaged 25·5 per 1000, ranging from 15·2 in Bournemouth, 15·4 in Hastings, 15·5 in Hornsey, 16·2 in Halifax, 18·1 in Bradford, 19·1 in Brighton, and 20·1 in Plymouth, to 31·1 in Warrington and in Middlesbrough, 31·7 in St. Helens, 32·2 in Sunderland, 32·6 in Bootle, 33·8 in Merthyr Tydfil, and 34·8 in Rhondda. In 142 smaller towns the mean birth-rate was 24·4 per 1000, and in the remainder of England and Wales, excluding the 218 chief towns, it was 24·3.

Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths was 89,094, against 90,078, 91,633, and 89,760 in the fourth quarters of 1904, 1905, and 1906 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 26s. 5d., 29s. 0d., and 32s. 6d. respectively in the preceding three quarters, was 34s. 8d. last quarter. The mean wholesale prices per lb. of British beef

and mutton at the Metropolitan Cattle Market were:—of inferior beef, 3 $\frac{3}{4}$ d.; of prime beef, 7d.; of inferior mutton, 6 $\frac{1}{4}$ d.; of prime mutton, 9 $\frac{1}{4}$ d. Compared with the average prices in the preceding three months, the mean price of inferior mutton showed an increase of $\frac{1}{4}$ d., while the mean prices of inferior and of prime beef and of prime mutton showed respectively a decrease of $\frac{3}{4}$ d., $\frac{1}{8}$ d. and $\frac{1}{8}$ d. The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 20s. 3d. per ton, against 16s. 8d. per ton in the fourth quarter of 1906. The mean price of Consols was 82l. 10s. 8d., having been 82l. 15s. 2d. in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had been raised on 15th August to 4l. 10s. was raised again on 31st October to 5l. 10s., on 4th November to 6l., and on 7th November to 7l. The mean rate during the quarter was 6l. 1s. 9d.

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 778,053, exclusive of lunatics in asylums, of casual paupers, and of persons receiving medical relief only; of these 258,449 received in-door, and 519,604 out-door, relief. The proportion of the population in receipt of poor-law relief was 22·3 per 1000, against 23·2 and 22·6 per 1000 respectively in the fourth quarters of 1905 and 1906.

Meteorology.

A detailed report, prepared in the Meteorological Office, on the weather over the United Kingdom in the past quarter, with a table of Monthly Results for a number of stations in England and Wales, will be found on pp. 71–91.

The early part of the quarter was marked by mild but exceedingly changeable weather, the rainfall of October being largely in excess of the average over nearly the whole Kingdom. The heaviest individual falls occurred on the 15th or 16th of the month. On the former date amounts ranging between 2 and 2 $\frac{1}{2}$ inches were recorded at several places in the south of Scotland, while on the latter date a large number of places in England recorded more than an inch, Lincoln and the immediate neighbourhood being visited by falls ranging between 3 and 3 $\frac{1}{2}$ inches. The warmest weather in October occurred in the first week, when the thermometer rose above 65° in many parts of the country. The coldest weather occurred on the 15th and 16th. On the night of the 15th a sharp frost was experienced at several of the northern and central stations.

November was also mild, but while the atmosphere was for the most part very humid, the rainfall was much smaller than in October, a large majority of stations reporting less than the average quantity. The first three weeks were especially dry and quiet, and often very mild; on the 9th the thermometer in many parts of our southern and eastern counties rose above 60°, and at Epsom and Geldeston it touched 64°. After the 21st of the month the weather became very unsettled, with large amounts of rain or snow in most parts of the country, the snowfall of the 24th–26th being heavy in some parts of our northern and eastern districts. The general absence of fresh or high winds resulted not infrequently in the formation of mist and fog, especially on the 10th and 11th and between the 29th and 30th, when many portions of our coasts were affected. On the 20th a thick fog in London lay well above the surface and produced intense darkness throughout the greater part of the day.

During the first three weeks of December the atmospheric conditions were almost as unsettled as in October, the weather being mild and open, but frequently very rainy. On several occasions, and in nearly all parts of the Kingdom, the sheltered thermometer rose to 55° and upwards, the mild days being interspersed, however, with occasional cold nights, during which the thermometer fell a few degrees below the freezing point. In the closing

week the wind, which had hitherto been from W. or S.W., shifted to E. and N.E., and the weather became cold and dry, the deficiency of heat being, however, much greater in the daytime than at night. Snow showers fell in various parts of the Kingdom between the 5th and 8th, and also at the close of the month.

In the south-east of England a striking feature in the weather of the quarter was the extreme rarity of anything in the nature of severe frost. On the surface of the ground the thermometer fell below the freezing point on several occasions but at Greenwich there was only one occasion, and at Westminster there was not one upon which the screened thermometer fell as low as 32°, a feature of an almost unprecedented character in the concluding quarter of the year.

For the quarter as a whole the *mean temperature* was above the average, the excess being slight (only half a degree) in England North-west and South-west, but rather large (more than two degrees) in the London district, and still larger (two-and-a-half degrees) in England South. The highest temperatures of the quarter occurred very generally on October 1st, when the thermometer rose to 65° and upwards in all parts of the country excepting the Channel district; in England Central it reached 67°, while in London and in some parts of England East and North-east it touched 68°. The lowest temperatures of the quarter occurred at various times, most commonly in the closing weeks either of November or December. In the Channel district the thermometer did not fall below the freezing point, and in London it did not go below 28°. Sharp frost was, however, experienced in other parts of the country, the lowest temperatures recorded in the screen being 20° at Llangammarch Wells (on December 29th), 22° at Stokesay (on November 30th), and 23° at Aspatria (on November 26th).

Owing mainly to a large excess in October the *rainfall* of the quarter was above the average in all districts. The excess varied, however, greatly in extent in different parts of the country. In the eastern counties it did not amount to more than 10 per cent., and in England North-west it was only 4 per cent. Most other districts had an excess of more than 20 per cent., the wettest regions (in comparison with the average) being England South, with an excess of 28 per cent., and England North-east and South-west, with an excess of 26 per cent. In the London district the total amount was 23 per cent. more than the normal. The number of days with a measurable quantity of precipitation ranged from 52 in London and 59 in England East to 66 in the Channel district and to 71 in England South-west. In London and in England East the wettest day failed to produce as much as an inch of rain, but in many other parts of the country larger amounts were registered very commonly, and in some instances on more than one occasion. The largest daily amounts at stations from which returns are employed in the preparation of the report were 3·00 ins. at Lincoln, 1·81 in. at Portland Bill, and 1·79 in. at Sheffield on October 16th, 2·19 ins. at Falmouth on November 2nd, and 1·70 in. at Aspatria on December 19th.

The *duration of bright sunshine* in London amounted to 153 hours, or to 19 per cent. of the possible, the aggregate being 9 hours in excess of the average. A trifling excess was reported also in England North-west and in the Channel, but in all other districts the amount was slightly below the normal. The largest proportion of the possible amount, 30 per cent., was recorded in the Channel district, and next to this 27 per cent. in the South of England.

Deaths.

The deaths registered in England and Wales last quarter numbered 129,761, and were in the proportion of 14·7 annually per 1000 persons living; this rate is 1·7 per 1000 below the mean rate in the ten preceding fourth quarters, and is the lowest death-rate recorded in any fourth quarter since

civil registration was established. In registration counties with populations exceeding 100,000, the death-rates ranged from 11·6 in Kent, 11·7 in Northamptonshire, 11·8 in Sussex and in Essex, 12·0 in Middlesex, and 12·1 in Surrey and in Berkshire, to 16·3 in Monmouthshire, 16·4 in the North Riding of Yorkshire, 16·5 in Northumberland, 17·2 in Lancashire, 18·0 in Glamorganshire, and 18·2 in Durham.

The 129,761 registered deaths included 66,469 of males and 63,292 of females, the death-rate among males being 15·6, and that among females 13·9, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding fourth quarters, the death-rate of males showed a decrease of 1·8, and that of females a decrease of 1·7 per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 112 is to 100; the mean proportion in the fourth quarters of the ten preceding years having also been 112 to 100.

*Urban and Rural Mortality.**

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1907 is estimated at more than sixteen millions, the death-rate was 15·4 per 1000 living, or 0·7 above the death-rate of the whole country. The rates in the several towns ranged from 9·5 in Hornsey, 10·1 in East Ham and in Bournemouth, 10·6 in Kings Norton, 11·1 in Leyton, 11·2 in Hastings, and 11·3 in Croydon and in Handsworth (Staffs.), to 18·8 in York, 19·4 in Bootle and in Oldham, 19·8 in Stockton on Tees, 20·1 in Preston and in Rhondda, 20·7 in Liverpool and in Wigan, and 23·6 in Merthyr Tydfil.

In 142 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at nearly five millions, the death-rate was 14·2 per 1000 living, or 1·2 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with an aggregate population estimated at about fourteen millions, of whom more than six and a quarter millions live in small towns, and more than seven and a half millions in rural districts, the death-rate was also 14·2.

Mortality at Different Ages.

Of the 129,761 deaths registered last quarter, 29,748 were those of infants under one year of age, 57,728 those of persons aged between one year and sixty years, and 42,285 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 136 per 1000, the average in the ten preceding fourth quarters having been 142. Among registration counties with populations exceeding 100,000, the lowest proportions were 68 in Hertfordshire, 74 in Wiltshire, 75 in Berkshire and in Dorsetshire, 81 in Cambridgeshire, 82 in Sussex, and 83 in Surrey. The highest proportions were 163 in Nottinghamshire, 166 in the West Riding of Yorkshire, 173 in Durham, 176 in Lancashire, and 180 in Glamorganshire.

In the 76 great towns infantile mortality averaged 154 per 1000 births, being 18 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 69 in Bournemouth, 77 in Hastings, 83 in Hornsey, 86 in Reading, and 87 in Birkenhead; the highest were 210 in Merthyr Tydfil, 212 in Stockport, 213 in Burnley, 233 in York, and 234 in Rhondda. Among the 142 smaller towns infantile mortality averaged 139

* It should be noted that the death-rates in these Urban and Rural areas have not been corrected for differences in the sex and age constitution of the respective populations; also that owing to the difficulty of distributing to their proper areas deaths occurring in institutions, the death-rate in the Rural area may possibly be slightly overstated.

per 1000 births, ranging from 47 in Winchester, 50 in Guildford, 51 in Bromley, 52 in Watford, 54 in Tunbridge Wells, and 55 in Harrogate, to 228 in Glossop, 229 in Hereford, 230 in Bilston, 254 in Morley, 257 in Farnworth, 259 in Stalybridge, and 262 in Doncaster. Excluding these 218 towns, infantile mortality in the remainder of England and Wales was in the proportion of 113 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 7·3 per 1000 of the estimated population at this group of ages, being 1·0 below the mean rate in the ten preceding fourth quarters. In the 76 great towns the mean mortality at this age-group was 7·9 per 1000, ranging from 4·4 in Hastings, 4·5 in Kings Norton, 4·8 in Handsworth (Staffs.), and 4·9 in Leyton, to 11·1 in Wigan and in Oldham, 11·2 in Bootle, 11·3 in Liverpool, and 13·3 in Merthyr Tydfil. In the 142 smaller towns the mortality at this age-group averaged 7·0 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 64·8 per 1000 of the estimated population at this group of ages; the mean rate in the ten preceding fourth quarters having been 68·0. In the 76 great towns the mean mortality at this age-group was 68·6 per 1000, the lowest rates being 48·9 in Northampton, 49·8 in Great Yarmouth, 50·2 in Bournemouth, 51·9 in Barrow in Furness, and 52·5 in Southampton; the highest rates were 85·7 in Wallasey, 86·3 in Stockport, 91·8 in Wigan, and 100·1 in Stockton on Tees. In the 142 smaller towns the rate averaged 66·9 per 1000.

Compared with the mean rates in the ten preceding fourth quarters, the mortality of infants under one year of age showed a decrease of 4·2 per cent., that of persons between one year and sixty years of age a decrease of 12·0 per cent., and that of persons aged sixty years and upwards a decrease of 4·7 per cent.

Mortality from certain Epidemic Diseases.

The 129,761 deaths from all causes include—

4,396	that were attributed to	diarrhœa,
2,527	"	" measles,
1,942	"	" whooping-cough,
1,601	"	" diphtheria,
933	"	" scarlet fever,
739	"	" "fever,"
0	"	" small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 12,138 deaths were referred last quarter, being in the proportion of 1·38 per 1000 of the estimated population, or 0·21 per 1000 below the average proportion in the corresponding quarters of the previous ten years.

The rates of mortality from whooping-cough and diarrhœa slightly exceeded the decennial averages, whilst the rates from each of the other diseases were below the respective averages.

Diarrhœa was the assigned cause of 4,396 deaths last quarter, corresponding to an annual rate of 0·50 per 1000, which is higher by 0·08 per 1000 than the decennial average rate for the fourth quarter of the year. In four counties no deaths from diarrhœa were returned last quarter. Among counties with populations exceeding 100,000 persons the highest death-rates were 0·76 in Staffordshire, 0·78 in Lancashire, 0·79 in the West Riding of Yorkshire, 0·83 in Glamorganshire, and 0·87 in Nottinghamshire. In the 76 great towns the average death-rate from diarrhœa was 0·73 per 1000; the rate was highest in the following towns:—Walsall 1·50 per 1000, York 1·51, Burnley 1·62, Rhondda 1·66, Rotherham 1·67, and Sheffield 1·81. In the 142 smaller towns diarrhœa was fatal on the average to 0·48 per 1000 of the

population, and caused the highest mortality in Widnes, Farnworth, Batley, Barnsley, Ince in Makerfield, and Longton. In the remainder of England and Wales the death-rate from diarrhoea averaged 0·25 per 1000.

Measles was returned as the cause of 2,527 deaths, corresponding to an annual rate of 0·29 per 1000 of the population, or 0·05 per 1000 below the average rate in the fourth quarters of the preceding ten years. Of the 55 registration counties, six were free from measles fatality throughout the quarter. Among counties with populations of more than 100,000, the highest death-rates from this disease per 1000 of the respective populations were 0·63 in Monmouthshire, 0·78 in Herefordshire and in Durham, 0·79 in Northumberland, and 1·29 in Glamorganshire. In the 76 great towns measles caused an average mortality of 0·27 per 1000. In 20 of these towns no deaths from this disease were registered during the quarter. The highest death-rates were 1·20 in Rhondda, 1·39 in Tynemouth, 1·60 in Ipswich, 2·28 in Barrow in Furness, 2·43 in Merthyr Tydfil, and 2·48 in Burton on Trent. In the 142 smaller towns, measles was fatal on the average to 0·30 annually per 1000 living, and among these towns showed exceptional fatality in Shrewsbury, Abertillery, Hereford, Pontypridd, Mountain Ash, and Stafford. In the remainder of England and Wales the average measles death-rate was 0·30 per 1000. Among registration sub-districts outside the 218 chief towns, measles was especially fatal in Wisbech, Anston, Standish, Darfield, Cornforth, Bishop Auckland, and Maesteg.

Whooping-cough accounted last quarter for 1,942 deaths, and for a death-rate of 0·22 per 1000 annually, which is above the average rate in the ten previous corresponding quarters by 0·01 per 1000. In four of the counties of England and Wales no deaths from this disease were registered; among counties with populations exceeding 100,000, the death-rate was 0·35 per 1,000 in Cumberland, 0·37 in Lancashire, 0·40 in Durham, 0·42 in Suffolk, 0·46 in Northumberland, and 0·53 in Denbighshire. In the 76 great towns, whooping-cough caused an average death-rate of 0·25 per 1000 living. Four of these towns were free from whooping-cough mortality throughout the quarter, but the death-rate was equal to 0·54 in Sunderland, 0·59 in Liverpool, 0·60 in South Shields, 0·67 in Aston Manor, 0·83 in Ipswich, 0·85 in Newcastle on Tyne, and 1·37 in Bootle. In the 142 smaller towns, the average death-rate from whooping-cough was 0·22 per 1000, the disease being especially fatal in Rawtenstall, Hindley, Nelson, Morley, Barnsley, and Eccles. In the remainder of England and Wales, whooping-cough caused an average mortality of 0·19 per 1000 annually. Among registration sub-districts outside the 218 chief towns, whooping-cough was exceptionally fatal in Dennington, High Littleton, Carlton (Worksop), Litherland, and Ruabon.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,601 deaths, a number corresponding to an annual rate of 0·18 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·09 per 1000. No death from diphtheria occurred in Radnorshire during the quarter. Among counties with populations exceeding 100,000 the highest death-rates from this disease were 0·28 in Hampshire and in the North Riding of Yorkshire, 0·30 in Berkshire, 0·31 in Wiltshire and in Dorsetshire, and 0·44 in Bedfordshire. The average death-rate from diphtheria in the 76 great towns was equal to 0·20 per 1000 of their aggregate population. No death from this disease occurred in four of these towns. The great towns in which diphtheria showed the highest fatality were the following:—Salford and Middlesbrough, where the rate was 0·39 per 1000 annually, Portsmouth 0·48, Norwich 0·50, Reading 0·55, and East Ham and Leyton 0·56. In the 142 smaller towns the mortality from this disease averaged 0·16 per 1000, the rate being highest in Chester, Poole, and Luton. In the remainder of England and Wales, diphtheria was fatal in the average proportion of 0·17 per 1000 living. Among registration

sub-districts outside the 218 chief towns, diphtheria was especially fatal in Westbourne, Brading, Trowbridge, Repton, Gainsborough, and Rivington.

Scarlet fever accounted last quarter for the deaths of 933 persons, equal to a rate of 0·11 per 1000 living, or 0·03 per 1000 less than the decennial average rate for the fourth quarter. Ten of the counties of England and Wales were free from scarlet fever mortality throughout the quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·14 in Lancashire, 0·15 in Essex, 0·18 in Warwick, 0·19 in London and in Staffordshire, and 0·25 in Middlesex. In the 76 great towns scarlet fever accounted for an average mortality of 0·15 per 1000 annually. No deaths from this disease were recorded in 20 of these towns. The highest scarlet fever death-rates were 0·31 in Burnley, 0·32 in Willesden, 0·38 in Walsall, 0·39 in Salford, 0·47 in Wolverhampton and 0·99 in West Bromwich. In the 142 smaller towns scarlet fever was fatal in the average proportion of 0·08 per 1000 living, and caused the highest mortality in Lincoln, Workington, Rochester, Hyde, and Felling. In the remainder of England and Wales this disease caused an average death-rate of 0·07 per 1000 living. Among registration sub-districts outside the 218 chief towns, scarlet fever was exceptionally fatal in Wirksworth and Springhead.

"*Fever*" (including the three chief forms—*typhus*, *enteric fever*, and '*pyrexia*' of uncertain origin) was the registered cause of 739 deaths last quarter, equal to an annual death-rate of 0·08 per 1000 of the population, or 0·12 per 1000 less than the average rate in the fourth quarters of the previous ten years. In seven counties no deaths from fever were returned last quarter; among counties with populations exceeding 100,000, the highest death-rates were 0·13 per 1000 in the East Riding of Yorkshire and in Glamorganshire, 0·15 in Carmarthenshire, 0·17 in Kent, and 0·21 in Nottinghamshire. In the 76 great towns fever caused an average mortality of 0·08 per 1000 annually. In fourteen of these great towns no deaths from fever occurred; the towns with the highest fever death-rates were York and Rhondda, where the rate was equal to 0·28 per 1000, Wigan 0·32, Nottingham 0·33, Grimsby 0·34, and Hanley 0·36. In the 142 smaller towns fever caused an average mortality of 0·11 per 1000 annually, the mortality being highest in Chatham and Tipton. In the remainder of England and Wales, the death-rate from fever averaged 0·08 per 1000. Among registration sub-districts outside the 218 chief towns, fever was especially fatal in Rothwell (Northampton), Runcorn, and Flint.

No death from *small-pox* was registered last quarter in any part of England or of Wales. The deaths in the four quarters immediately preceding numbered 12, 4, 5, and 0, respectively.

Violent Deaths.

The deaths in England and Wales that were referred to different forms of violence, either accidental or otherwise, numbered 4883 last quarter, and corresponded to an annual rate of 0·55 per 1000 of the population, against an average of 0·59 in the ten preceding fourth quarters. In registration counties with populations exceeding 100,000, the lowest death-rates from violence were 0·27 in Carnarvonshire, 0·33 in Sussex, 0·34 in Middlesex, 0·35 in Bedfordshire and in Herefordshire, and 0·36 in Oxfordshire and in Dorsetshire; the highest rates were 0·70 in Northumberland, 0·71 in Durham, 0·76 in the North Riding of Yorkshire, 0·77 in Shropshire, 0·82 in Monmouthshire, and 0·87 in Glamorganshire. In the 76 great towns the mean rate was 0·54 per 1000 living; among the several towns the rate was only 0·12 in Hastings, 0·15 in Burton on Trent, 0·16 in Leyton, and 0·17 in Warrington; but it rose to 0·83 in Hull, 0·96 in Bootle, 0·98 in Rhondda, and 1·14 in Great Yarmouth.

Certification of Causes of Death.

Of the 129,761 deaths registered in England and Wales last quarter, the causes of 118,840, or 91·6 per cent., were certified by registered medical practitioners, and the causes of 9,100, or 7·0 per cent., by coroners after inquest; whilst the causes of the remaining 1,821, or 1·4 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding fourth quarters having been 1·8 per cent. Among registration counties with populations exceeding 100,000, the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Middlesex, Wiltshire, Cornwall, Somersetshire, Gloucestershire, the East and North Ridings of Yorkshire, and Glamorganshire, but it reached 3·0 in Derbyshire, 3·1 in Cumberland, 3·2 in Carnarvonshire, 3·3 in Bedfordshire and in Shropshire, and 3·9 in Denbighshire. In the 76 great towns the mean proportion of uncertified deaths was 0·8 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham East Ham, Walthamstow, Hastings, Brighton, Bournemouth, Southampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Walsall, Derby, Stockport, Wigan, Oldham, York, or Cardiff, the proportion per cent. rose to 3·1 in Birmingham, 3·9 in St. Helens, 4·0 in Gateshead, 4·9 in Warrington, and 5·1 in South Shields.

Inquests.

Inquests were held in England and Wales concerning 9,100, or 7·0 per cent., of the total deaths, the mean proportion in the ten preceding fourth quarters having been 6·7 per cent. In the 76 great towns the proportion of inquest cases averaged 7·7 per cent., ranging from 1·6 in Burton on Trent, 2·1 in Warrington, and 3·2 in Hastings, to 11·3 in Great Yarmouth, 11·5 in Devonport and in Derby, 11·6 in Tottenham, and 11·9 in Southampton.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 24,255, or 18·7 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding fourth quarters having been 15·9 per cent. In the 76 great towns the deaths in public institutions averaged 24·8 per cent. of the total deaths, the lowest percentages in the several towns being 3·4 in Rhondda, 5·9 in Handsworth (Staffs.), 8·8 in Smethwick, and 9·0 in Kings Norton; the highest percentages being 29·8 in Liverpool, 30·0 in Brighton, 30·2 in West Ham, and 39·0 in London.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual rates of birth and death per 1000 living in these towns last quarter were as follows:—

	Birth-rate.	Death-rate.
Edinburgh	21·0	14·5
Glasgow... ..	26·9	17·7
Dublin	25·7	21·5
Belfast	28·1	23·0

COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 28 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the past

quarter (Table XIII.). Excluding the Indian cities, the highest and lowest annual rates of birth and death during the fourth quarter of 1907 were as follows:—

BIRTH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Trieste	31·9	Brussels	16·4
Toronto	29·5	Paris	18·0
Breslau	28·3	Prague	18·4
Bucharest	28·2	Berlin	22·1
New York	27·9	Venice	22·3
Copenhagen	27·8	Antwerp	22·4
London ...		24·4	

DEATH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Moscow	24·5	Christiania	11·8
Bucharest	23·8	Amsterdam	12·6
St. Petersburg	22·5	Brussels	13·0
Trieste	22·5	Antwerp	13·1
Breslau	21·4	Chicago	13·3
New Orleans	21·2	Copenhagen	13·5
London ...		14·3	

Small-pox caused 79 deaths in Rio de Janeiro, 17 in Moscow, 8 in St. Petersburg, 5 in Vienna, and 1 each in Paris and in New York.

Measles was most fatal, in proportion to population, in St. Petersburg, Copenhagen, Stockholm, Berlin, and Moscow; *scarlet fever* in St. Petersburg, Bucharest, Moscow, and Chicago; *diphtheria* in St. Petersburg, Toronto, Breslau, Berlin, New York, Philadelphia, and Moscow; *whooping-cough* in Breslau, Copenhagen, St. Petersburg, Berlin, and Moscow; "*fever*" in St. Petersburg, New Orleans, Bucharest, and Toronto; and *diarrhæal diseases* in Moscow, Munich, Breslau, and Trieste.

Infantile Mortality.—Among those cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 79 in Christiania, 85 in Stockholm, 93 in Amsterdam, and 97 in Paris, to 188 in Antwerp, 196 in Bucharest, 229 in Munich, and 242 in Breslau.

INDIAN CITIES.—The death-rate was equal to 41·1 per 1000 in Madras, 37·7 in Calcutta, and 33·6 in Bombay. *Small-pox* caused 27 deaths in Calcutta, 26 in Bombay, and 9 in Madras; *measles* caused 35 deaths in Madras, 29 in Bombay, and 15 in Calcutta. Under the heading "*fever*" 2440 deaths were returned in Calcutta, 1364 in Madras, and 1101 in Bombay, including 192 deaths in Calcutta 2 in Madras, and 227 in Bombay from *plague*. The mortality from *diarrhæal diseases* was excessive in all of these Indian cities; *Asiatic cholera* caused 1033 deaths in Calcutta, 210 in Madras, and 48 in Bombay.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the fourth quarter of the year 1907 (*see* pages xxvii—xxxii); and in the two following Tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxiii—xxxviii).

The Year 1907.

According to the quarterly returns furnished by local registrars, 917,636 births and 524,321 deaths were registered in England and Wales in the year 1907. The natural increase of population, by excess of births over deaths, was therefore 393,315, the average annual increase in the preceding five years having been 409,456.

According to a Return issued by the Board of Trade it appears that in the twelve months ended 31st December 1907, the total passenger movement to and from places out of Europe showed a net balance outward of 348,159 passengers, or an increase of 6 per cent. compared with the number in the corresponding period of the previous year.

The outward balance among persons of British origin amounted to 237,204 persons. Of these 154,913 were English, 44,304 Scottish, and 37,987 Irish. There was also an outward balance of 112,047 persons of foreign origin, and an inward balance of 1,092 among persons whose nationality was not stated.

Compared with the numbers in the corresponding period of last year the net outward balance of English passengers showed an increase of 20 per cent., that of Scottish an increase of 29 per cent., and that of Irish an increase of 22 per cent., while that of foreign passengers showed a decrease of 16 per cent.

The birth-rate in England and Wales in 1907 was 26·3 per 1000 of the population, which is 0·8 per 1000 below the rate in 1906, and lower than the rate in any other year on record; compared with the average in the ten years 1897–1906, the birth-rate in 1907 showed a decrease of 2·1 per 1000.

The death-rate in 1907 was 15·0 per 1000, which was 0·4 per 1000 below the rate in 1906, and lower than the rate in any other year on record; compared with the average rate in the ten years 1897–1906, the death-rate in 1907 showed a decrease of 1·7 per 1000.

The 524,321 deaths registered in 1907 included 108,214 of infants under one year of age, 236,656 of persons aged between one year and 60 years, and 179,451 of persons aged 60 years and upwards. The rate of mortality among infants under one year of age to 1000 registered births was 118, which is 14 per 1000 below the rate in 1906. The rate in 1907 was lower than the rate in any other year on record; this was mainly due to the showery and exceedingly cool summer experienced in 1907, which checked the rise in the rate of child mortality that usually occurs in the third quarter of the year. Compared with the average in the ten years 1897–1906, the rate of infantile mortality in 1907 showed a decrease of 27 per 1000. The death-rate among persons aged between one year and 60 years was 7·5, and that among persons aged 60 years and upwards was 69·4, per 1000 of the estimated populations at the respective groups of ages.

The total deaths registered included 12,409 from measles, 10,304 from diarrhoea, 10,036 from whooping-cough, 5,648 from diphtheria, 3,203 from scarlet fever, 2,344 from "fever" (including the three principal forms, *typhus*, *enteric fever*, and *pyrexia* of uncertain origin), and 9 from small-pox. Thus 43,953 deaths were attributed to these epidemic diseases, corresponding to a rate of 1·26 per 1000 living, against 1·94, 1·52, and 1·73 respectively in the three preceding years.

Birth-rate, Death-rate, and Analysis of Mortality in the year 1907.

	ANNUAL RATE PER 1000 LIVING.										Deaths under one year to 1000 Births.

To different forms of violence 19,651 deaths were referred, being in the proportion of 0·56 per 1000 of the population, against 0·57 per 1000 in each of the preceding three years.

The 524,321 deaths included 36,326 cases, or 6·9 per cent., in which inquests were held; and 7,554 cases, or 1·4 per cent., in which the causes were not certified either by registered medical practitioners or by coroners.

The foregoing statistics for the year 1907, having been derived from returns furnished quarterly by the local registrars, are subject to revision when the causes of death and other details shall have been finally classified and tabulated for publication in the Registrar-General's Seventieth Annual Report, which is now in course of preparation.

TABLES.

TABLE I.—**Marriages, Births, and Deaths** registered in **England and Wales** in the Years **1897-1907**, and in each Quarter of those Years.

TABLE V.—76 Great Towns.—Population: Births, Deaths, and Meteorology in the 13 Weeks ended 28th December, 1907.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.). The deaths in the other towns have been corrected, as far as possible, for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong.

The DEATHS registered include

* Excluding deaths of persons admitted into public institutions from without the boundaries of Dublin and Belfast respectively.
 † Including 10 deaths in Edinburgh.

* Phoenix Park.
 * Fitzwilliam Square.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The death-rate in London has been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The death-rates in the other towns have been corrected for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong. Of the deaths excluded from London previous to 1906, only those which occurred in the London Fever Hospital, the Metropolitan Asylums Hospitals, and the Middlesex County Lunatic Asylum were added to the several parts of the Outer Ring.

TABLE VII.—One hundred and forty-two smaller Towns.—Population; Births and Deaths in the QUARTER ended 31st December, 1907.

NOTE.—The 142 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 at the Census of 1901. The deaths in these towns have been corrected for deaths occurring in Public Institutions, while in addition the deaths occurring in London of all persons known to belong to towns in the Metropolitan Outer Ring have been credited to the several towns to which they belong.

The Registration Districts, 634 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

^a See page 2, note ^b.

^b For London, the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrars.

II.—SOUTH EASTERN COUNTIES.—REGISTRATION DISTRICTS.

Registration Districts.		Area in Statute Acres.	Enumerated Population, 1901.	Marriages Registered in Quarter ended 30 Sept. 1907.	Births Registered in Quarter ended 31 Dec. 1907. * 1a; 1, 2, 3. On 1st October, 1907, St. Mary Paddington (1), St. John Paddington (2), and North West Paddington (3) sub-districts were abolished and their constituent parts rearranged into three new sub-districts, viz.: Paddington North (1), Paddington Central (2), and Paddington South (3). See p. 70.

* The Registration sub-districts (229 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; W indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; F a Hospital for Infectious Diseases; H another Hospital; and L a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

^b See page 2, note ^b.

^c See page 6, note ^b.

321.—BARTON REGIS. (Dissolved 1 January, 1905.)																			

^a 315 : 3.—The 7 deaths from measles belonged to Weston super Mare Urban district. The Registrar reported too late for the correction of these tables that 6 deaths from diphtheria were registered in the sub-district instead of 5 as shown above.

^b 316 : 3.—The 4 deaths from whooping-cough occurred in the parish of Paulton.

^c 317 : 1.—The 3 deaths from measles occurred in the parish of Twerton.

VI.—WEST MIDLAND COUNTIES.—REGISTRATION SUB-DISTRICTS—*continued*.

^a 618 : 2.—Of the 14 deaths from whooping-cough, 12 of which were registered during December, 10 belonged to the parish of Rhoslanenchrugog; from the 1st to 17th January, 1908, 9 more deaths from this disease were registered in the sub-district.

^b 630 : 1.—The 5 deaths from measles, and the 3 from whooping cough belonged to Llangefni Urban District; from the 1st to the 17th January, 1908, 4 more deaths from whooping-cough occurred in the same district.

CHANGES IN REGISTRATION DISTRICTS AND SUB-DISTRICTS IN THE QUARTER ENDED 31ST DECEMBER, 1907.

Changes in Registration boundaries are made by order of the Registrar-General, with the consent of the Local Government Board. Those changes which affect the boundaries of Registration Districts are necessitated by changes in the boundaries of Poor Law Unions.

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING THE
QUARTER ENDED DECEMBER 31ST, 1907.

EXTRACTED FROM THE
MONTHLY WEATHER REPORTS
OF THE
METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 170 STATIONS,
TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 58 STATIONS
IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

OCTOBER, 1907.

General Summary.—The opening day of October witnessed a complete reversal of the atmospheric conditions which had for some time previously been prevalent over the British Isles. Fine, quiet and very dry weather held until the last day of September, but on the following morning a cyclonic disturbance of considerable depth appeared off the south-west of Ireland, and its influence extended to all parts of the Kingdom. Thenceforward, there was an all but unbroken succession of disturbances, so that the weather was of an exceedingly unsettled type, and rain was exceptionally frequent and often unusually heavy over large areas, particularly so over the southern half of Scotland on the 15th, and over a great part of England on the following day. Such excessive falls as occurred in the Lowlands on the 15th appear to have been very rarely equalled in the past 100 years, in the neighbourhood of Edinburgh only once. It is interesting to observe that the wet weather extended southward to the Mediterranean, and was much worse to the southward than to the northward of the English Channel. Various parts of France, both in the north and in the south, received more than 10 ins. of rain during the month, the amounts ranging upwards to more than 15 ins. at Nice, and 23 ins. at Biarritz. Thunderstorms, or thunder or lightning alone, occurred on 16 days, but as a general rule only in a few isolated situations on any one day, while in all cases the storms were of a comparatively unimportant character, and speaking generally they were not associated with the heavy rains of the month. On the 8th, 9th and 10th thunderstorms were experienced in many places in England, Wales, Ireland, and the Isle of Man; on the 11th and 19th, many scattered places in England were visited; and on the 15th the reports were mainly confined to eastern Scotland and the north of England.

From time to time falls of hail were reported both with and without thunderstorms. On the 7th, 8th and 15th the observer at Lauderdale and on the 16th the observer at Ardross Castle noted snow on the neighbouring hills, the only references to snow during the month.

With the approach of winter the frequency of days with fog continues to increase over the inland districts, but although fog was reported on various sections of our coasts on as many as 20 days, it was on most occasions limited to one or two stations, in the majority of cases somewhere on the east coast of Britain, a very decided decrease being noticeable on the western and southern coasts. On the 1st fog was reported along the northern shores from the Hebrides to the Tyne; on the 5th in the west, between Holyhead and Plymouth; and on 24th and 25th down the east of England, from the Tyne to the Straits of Dover.

For the month as a whole pressure was considerably below the usual level; temperature was nearly everywhere in excess of the normal, decidedly so in several localities; the winds were very variable in direction, but no great gales were experienced; rainfall was deficient in some parts of Scotland, decidedly in excess elsewhere; and bright sunshine was irregularly distributed in all districts.

Pressure.—*Mean at 8 a.m.* ranged from 29·52 ins. in the north-west of Ireland to about 29·65 ins. at Jersey and on the Straits of Dover. The mean gradient was thus not only very slight, about 0·1 in. over a distance of 400 miles, but it was also almost at right angles to the normal gradient, the normal pressure distribution being from an area of low value beyond the north of Scotland to an area of relatively high readings over the Channel and France. In the month now under review pressure increased northward from Scotland to about 29·8 ins. along the Arctic Circle. The mean values were in all cases much below the average, the deficiency amounting to 0·12 in. at Sumburgh Head, 0·17 in. at Wick, and increasing southward to more than 0·3 in. generally over the south-western quarter of the Kingdom, nearly 0·34 in. at Valencia, Roche's Point and Birr Castle. *Highest* readings were recorded on the 5th, 30·18 ins. at Jersey, and 30·17 ins. at Scilly; on the 12th, 30·16 ins. at Jersey, and 30·12 ins. at Dover;

and on the 31st, 30·17 ins. at Wick, and 30·16 ins. at Sumburgh Head and Stornoway. *Lowest* values occurred on the 15th, 29·01 ins. at Leith, and 29·02 ins. at Shields; on the 16th, 28·84 ins. at Jersey, and next morning 28·87 ins. at Portland Bill; on the 18th, below 29 ins. generally over Ireland, Wales and Scotland, 28·52 ins. at Valencia, and 28·54 ins. at Blacksod Point; and on the 30th, 29·10 ins. at Portland Bill, and 29·11 ins. at Bath. *Range* was not large for the season. It was from 0·9 in. to an inch over the eastern portion of England, and only on the west coast of Ireland did it exceed 1·5 in.

Depressions.—One of the most notable features during the month was the almost constant presence of low pressure systems with their minima either directly over the country—mainly the southern districts—or lying out on the ocean immediately beyond the western and south-western coasts, too ill-defined and irregular in their movements for their positions to be determined. It is an unusual circumstance that practically the whole of the important disturbances of the period remained and finally dispersed in our immediate neighbourhood, only one passing so far east as the coast of Denmark. On the 16th a deep cyclonic area moved from the Bay of Biscay across Brittany to the English Channel, and on nearing the Isle of Wight on the evening of the 17th it completely dispersed or was merged in a deeper depression which on the following morning was situated off the south-west of Ireland, but which subsequently disappeared out on the Atlantic.

Anticyclones.—Nearly all through the month the principal areas of high pressure were situated over the eastern half of Europe, but occasionally anticyclones of slight intensity visited the Bay of Biscay and Spanish region, and at the close of the month one appeared to the westward of Iceland and advanced to the Færøe, but there was no instance of the central space of an anticyclonic system over any portion of the British Isles.

Winds.—With so many pressure minima crossing the country in various directions the winds experienced were from every quarter of the compass, but over the eastern half of England, as the disturbances did not pass on to the North Sea, there was a larger proportion of Southerly and South-Westerly breezes than in other districts. The disturbances often occasioned a considerable increase in the force of the breeze, to a strong or high wind, but the gales reported were comparatively unimportant for the month of October. The strength of a gale was felt on some section or other of our coasts on fourteen days, but as a rule only at one, two or three stations, the most stormy period being the four days, 17th to 20th, gale force being reported in several situations on each day. A strong Southerly gale occurred at Jersey and Portland Bill on the 10th, South-Westerly at Jersey on the 16th, Southerly at Portland Bill and Roche's Point, and Northerly at Donaghadee on the 18th, and Southerly at Pembroke and Roche's Point, and Westerly at Jersey on the 19th. At the self-recording anemometrical stations the only instances of a mean hourly velocity of 50 miles or more occurred at Falmouth (Pendennis Castle). On the morning of the 18th a velocity of 55 miles was attained, some gusts being at the rate of 71 miles per hour. On the 20th a velocity of 50 miles was registered, with gusts at the rate of 64 miles per hour, the direction on both days being Southerly. At the same station on the 16th a Northerly gale which reached 46 miles in an hour had gusts of 71 miles per hour. The days on which the force of a gale was reported at various stations numbered 6 at Jersey, 4 at Holyhead and Pembroke, and 3 at Malin Head, Donaghadee, Roche's Point, Scilly and Portland Bill.

Temperature.—*Mean at sea level* ranged from 56° at Guernsey, 55° at Ventnor Hospital, and above 52° at most stations in the extreme southern and south-eastern counties of England to below 49° over Scotland and the inland districts of Ireland, 46°·5 at Nairn. The distribution of the sea-level temperatures shows a general resemblance to the normal, but the actual values were above the average, with the exception of some in the western districts, the excess amounting to 2° and upwards in many places, 3°·3 in London (Westminster), 3°·6 at Yarmouth, and 3°·7 at Eastbourne. *Highest* readings were registered on various days in the first week—69° at Newquay on the 1st and 4th; 68° at Cambridge, Lincoln, Barnet, Greenwich, Camden Square, Southend-on-Sea and Cullompton on the 1st; 67° at Fulbeck and Maidenhead on the 1st, and at Nottingham, Raunds, Hull and Whitby on the 6th; 66° at Lairg on the 5th, and at Dublin on the 6th; 65° at Killarney on the 1st, and in Dublin and at Nairn and Tillypronie on the 6th. On the whole the afternoons' values did not show any great variation, but on some occasions they were decidedly low for time of the year. In Ireland the 8th was a cold day, with a maximum of 44° at Clongowes Wood, 45° at Dublin, and 46° at Birr Castle. Over Britain the coldest afternoons were those of the 15th, with 41° at Kilmarnock and 43° at Aspatia; the 16th, 42° at Stornoway and 44° at Sumburgh Head and Wick; and the 24th, 40° at Garforth, and 42° at York. *Lowest* night readings occurred on various dates, mainly on the 8th in Scotland, and on the 16th in England and Ireland, the last-mentioned division returning the greatest cold experienced during the month, 25° at Clongowes Wood and Markree Castle, against 26° at Balmoral, Crathes and Lairg on the 8th, and at Garforth and Llangammarch Wells on the 16th, 27° at Nairn, West Linton and Wick on the 8th, and at Buxton, Skegness and Stokesay on the 16th. On the whole, therefore, the frosts experienced were not of any great severity for the season, there being very few instances of shade values below 30°. Mild nights, on the other hand, were fairly frequent, with very numerous cases of minimum values above 50°. On the morning of the 1st Valencia did not sink lower than 58°, Portland Bill, Clacton-on-Sea and Yarmouth 57°, and other southern stations 56°.

On the 6th the minimum was 57° at Guernsey, Plymouth, Portland Bill, Southampton, Leeds, and Manchester. *Range* was moderate generally, 35° or more at many stations, 39° at Raunds, and 40° at Lairg and Nottingham; at some coast stations it was small, 20° at Jersey and Pembroke, 19° at Deerness, and 18° at Portland Bill, Falmouth, Scilly and Guernsey. *Vapour Pressure* ranged from 0.250 in. at Nairn (8 a.m.) to 0.393 in. at Skegness (6 p.m.). *Relative Humidity* was generally rather high and ranged from 80 per cent. at Ventnor (9 a.m.) to 99 per cent. at Tottenham (9 p.m.). *Nocturnal Radiation Temperature* (on grass) frequently descended to 30° or lower in many parts of the Kingdom, on from five to nine occasions at a number of stations, ten at Cardiff, and thirteen at Balmoral, the lowest readings being 17° at Balmoral on the 8th, 18° at Crathes on the 8th and 17th, and 20° at Markree Castle on the 16th. *Mean Earth Temperature* at 1 ft. depth ranged from 48°.9 at Cockle Park to 55°.7 at Hastings; and at 4 ft. depth from 48°.5 at Marchmont to 58°.1 at Guernsey.

Rainfall.—In the north of Scotland, and locally in south Lancashire, the month's precipitation was below the average, the deficiency being large in some cases, 3 ins. at Stornoway, 3.7 ins. at Laudale, 4.1 ins. at Fort William, and 5.6 ins. at Glencarron. The rest of the country returned amounts above the average, the excess being very marked as a rule, in numerous instances exceeding 2 ins., and amounting to 4.2 ins. at Harrogate, 5 ins. at Leith and Shaftesbury, 5.5 ins. at Hereford, and 6.5 ins. at Salisbury. The month's aggregates exceeding 5 ins. were unusually numerous, and ranged upwards to 9 ins. at Whitechurch, 9.3 ins. in the Forest of Dean (900 ft.), 9.8 ins. at Portland Bill, 10 ins. at Salisbury, 10.8 ins. at Bournemouth, 10.9 ins. at Caragh Lake, 11.5 ins. at Mount Callan, Clare, and 11.6 ins. at Abersychan. The smaller totals were 2 ins. at Cambridge, and 1.6 in. at Lairg and Strathpeffer. Falls of an inch or more in a day were reported on as many as 19 days, the quantities in most cases being less than 1.5 in., but on the 15th, southern Scotland was visited by a very heavy rainstorm, during which Glasgow received 2.5 ins., and Leith and Thornton Hall 2.6 ins. On the following day a large number of places in England recorded more than an inch, up to 1.8 in. at Portland Bill, Mareham Le Fen, and Sheffield, 1.9 in. at Tealby, and 3 ins. at Lincoln (3.5 ins. in the suburbs of the city). At Heddou-on-the-Wall on the 17th, 1.74 in. fell in 13 consecutive hours. The number of days on which rain was measured was generally very large, 25 or more in many districts, 30 at Bognor and Killarney, and 31 at Pembroke, Foynes, and Blacksod Point, against 17 at Cambridge and Raunds, 15 at Felixstowe, and 14 at Dunrobin.

Bright Sunshine.—The distribution of sunshine was irregular, above the average in some places, below it in others, Scilly showing an excess of 27 hours, Guernsey 34 to 36 hours, while Brighton and Armagh returned a deficiency of 32 hours, Birr Castle 40, and Phoenix Park 45 hours. The largest totals were 140 hours (43 per cent. of the possible) at Jersey, 142 (43 per cent.) at Scilly and in Guernsey, 146 (45 per cent.) at Brooklyn, and 151 hours (46 per cent.) at Villa Carey. At the other extreme Balta Sound had 54 (18 per cent.), Newcastle-on-Tyne 53 (17 per cent.) and Glasgow 41 hours (13 per cent.). The morning cloudiness (overcast sky=10) ranged from 4.1 at Dunrobin to 9.1 at Glasgow; the evening cloudiness from 4.1 at Dunrobin to 9.0 at Dundee. Fog was reported on 10 days at Bennington, 11 at Tillypronie, 13 at Belvoir Castle, and 14 at Southampton.

Aurora.—A display of aurora was witnessed in the north and north-west of Scotland on the 27th.

NOVEMBER, 1907.

General Summary.—For the time of year the month was marked by very quiet weather conditions, more especially during the first three weeks, when the distribution of pressure was mainly anticyclonic, there being only one important disturbance, which passed swiftly eastward beyond Scotland in one night, and occasioned the severest and most widely felt gale of the month. Perhaps the most striking feature of this quiet spell was its extremely mild and humid character, the air temperature being well above the normal for the season. Notwithstanding the dampness of the atmosphere, the rainfall records for the three weeks disclose amounts below the normal over nearly the whole Kingdom, the general deficiency over south-western England being an inch, over southern England and southern Ireland 1.3 in., and over the English Channel 1.7 in. From the 22nd to the 26th formed a much less settled period, low pressure systems prevailing, one of them rather deep, but not producing so much wind as the depression of a fortnight earlier. The weather now became very rainy, with hail or snow daily at a number of stations in various parts of Britain and Ireland. As a rule the falls of hail or snow appear to have been of comparatively little importance. On the 24th, however, the snowfall at Rauceby was 3 ins. deep; on the 25th a heavy fall was reported at Temple Bruer; and on the 26th there was a ceaseless fall at Dunfanaghy, while the observers at Newton Rigg and Uldale described the day's fall as a "blizzard." The precipitation during this unsettled spell was considerably in excess of the normal in most localities, but it was not sufficient to obliterate the deficiency during the preceding period, so that regarded merely from the point of view of the quantity of rain November was, over a large part of the country, a dry month. In the two last days the pressure distribution reverted to a quiet, anticyclonic type.

There was a very marked falling off in the frequency of electrical phenomena, there being few reports even of lightning or distant thunder. On the 12th a thunderstorm was recorded at Kirkby Lonsdale, Morpeth, and at Laudale, and on the following day at Llandudno. Ten days later Llandudno was again visited, another storm passing over Colmonell the same day, and on the 26th a thunderstorm occurred at Ballinacurra and Cork. The thunderstorms of the 27th were the only ones experienced over an extensive area, a considerable number of stations in the southern and eastern counties, from Dorsetshire to Lincolnshire, and also Cronkbourne and Holyhead, in the Irish Sea region, reporting thunder and lightning, many places scattered over a still wider area either thunder or lightning. Next day there was a thunderstorm in various parts of Lincolnshire and Yorkshire.

The predominance of quiet and damp weather was favourable to the formation of fog, which was rather frequent both inland and on the coasts, the phenomena being reported on as many as 26 days. On the 10th and 11th the fog extended from Yarmouth to Plymouth; on the 12th from Skegness to Dungeness; and on the 29th from Spurn Head to Dover. The fog of the 30th on the Irish Sea was exceptionally dense, necessitating the suspension of all shipping traffic in and out of Liverpool. Inland the fogs were frequently of considerable density, the most singular being the black canopy suspended at a moderate elevation above London on the 20th, the atmosphere in the streets being practically clear even of mist. As a result an intense darkness ruled, so that throughout the day artificial light was necessary in the streets, as well as indoors. In the most distant suburbs the fog was thick at the ground level, and on the next day appeared over the Midland Counties, very dense and occasioning much inconvenience and delay to traffic.

For the month as a whole pressure was above its usual level; temperature was deficient in Ireland, and slightly so in the west of Scotland, generally in excess elsewhere; the winds were mainly from Southerly to Westerly directions, with a considerable proportion of Easterly breezes in the south; rainfall was deficient at the great majority of stations in all districts, and the duration of bright sunshine was rather irregular in its distribution.

Pressure.—Mean at 8 a.m. ranged from 29·98 ins. at Jersey, and above 29·95 ins. over the southern and midland counties of England to below 29·85 ins. over western and northern Scotland, 29·81 ins. at Stornoway. The general distribution of mean pressure did not differ materially from the normal, but in all cases the actual values were above the average, only slightly, by 0·02 ins., at several of the more southern stations, the excess increasing northward, to as much as 0·1 in. at Aberdeen and Sumburgh Head. *Highest* readings were registered on the 15th, 30·43 ins. at Scilly, and 30·42 ins. at Valencia and Roche's Point; on the 18th, 30·44 ins. at Liverpool, and 30·43 ins. at Donaghadee and Shields; on the 21st, 30·39 ins. at Oxford, and 30·38 ins. at Scilly, Jersey, Dover and Clacton-on-Sea; and on the 30th, 30·51 ins. at Donaghadee, and 30·49 ins. at Blacksod Point, Birr Castle and Liverpool. *Lowest* readings were observed on the 12th, 28·88 ins. at Stornoway, and 28·92 ins. at Sumburgh Head; and on the 26th or early on the 27th, 28·83 ins. at Donaghadee and Valencia. *Range* showed a very considerable increase as compared with that reported in several of the preceding months, from 1·1 in. at Jersey, and 1·2 in. generally over the more southern parts of England to 1·6 in. at Malin Head, Valencia, and Birr Castle, and 1·7 in. at Blacksod Point and Donaghadee.

Depressions.—Most of the disturbances which came within the limits of observation made their appearance in the neighbourhood of Iceland, and in several instances they passed on north-easterly paths across the western portion of the island, disappearing beyond the Arctic Circle. Of the low pressure systems which visited the British Isles or came near our coasts the majority were comparatively shallow or were merely secondary irregularities of a "V" shaped formation. The only deep ones were those of the nights of the 12th and the 26th. The former was indicated to the southward of Iceland on the morning of the 12th, and by the following morning its minimum of pressure had already passed Shetland and was nearing the Norwegian coast, eventually travelling away across the Baltic. Both in Shetland and in the Hebrides the barometer dropped quickly below 29 ins. late on the 12th. The other important disturbance was the deepest of a number which appeared over the country in the fourth week, two of which seem to have coalesced in the night of the 26th–27th, the barometer descending below 29 ins. at a number of places in England, Scotland and Ireland. The progress of the system was very slow, and on the evening of the 28th it dispersed on reaching Cardigan Bay.

Anticyclones.—The principal high pressure systems of the month were found over some portion or other of the Continent. By the evening of the 20th, in a great anticyclone covering eastern Europe, the barometer had risen above 31 ins. at Moscow, touched 31·07 ins. on the evening of the 22nd, then passed slightly below 31 ins. next morning. On the morning of the 22nd the barometer at Moscow read 31·06 ins., and at Seydisfjord, on the east coast of Iceland, 28·42 ins., a difference of 2·64 ins. The minor anticyclones whose central spaces visited the British Isles passed quickly across the country from the Atlantic. On the 6th, one, with the barometer at about 30·4 ins., appeared on the coast of Mayo, soon crossing the north of England. Another, of equal height, reached the south of Ireland, on the morning of the 18th and travelled north-eastward to the North Sea. On the 29th one appeared off the north of Ireland, the barometer rising to about 30·5 ins., but by the evening of the 30th the system had been transferred to western Germany.

Winds.—There was a marked preponderance of winds from between South and West over the western and northern portions of these Islands, but in the southern and south-eastern districts the direction was more variable, winds from South-Easterly, Easterly and North-Easterly points being frequently reported. In the night of the 12th-13th a strong Westerly gale was felt at Castlebay and Holyhead, a whole gale from North-West at Stornoway and Malin Head, and from South-West at Donaghadee and Dover. On the 27th a strong gale from South-East blew at Donaghadee, and from North-East at Wick. On other occasions the force of a gale was only reported in one or two isolated localities. The anemometrical registrations show few instances of a velocity of 50 miles in an hour. Early in the morning of the 13th 59 miles in the hour was recorded at Fleetwood, and in the forenoon of the 26th, 51 miles per hour at Pendennis Castle. The days on which the force of a gale was reached numbered 7 at Deerness, 6 at Malin Head, and 5 at Stornoway and Wick.

Temperature.—*Mean at sea level* ranged from 51°·5 at Guernsey, 51° at Scilly, and above 47° over the extreme south of England and the south-west of Wales, to below 44° in central Wales, below 43° over the greater part of Scotland and the central districts of Ireland, less than 41° at Birr Castle and Crathes. The general distribution was in fair agreement with the normal. In most parts of Ireland and the west of Scotland the actual values were below the average, only slightly so in the latter region, but in Ireland the deficiency ranged upwards to 1°·7 at Markree Castle, 1°·9 at Birr Castle, and 2° at Kilkenny. Over the rest of the Kingdom the results were in excess of the average, to the extent of more than 2° at various stations in the south and east of England, amounting to 3° at Portland Bill, 3°·1 at Worthing, and 3°·3 at Eastbourne. *Highest readings* were observed on very varied dates in different parts of the country. In exceptionally fine and sunny weather over southern and eastern England on the 9th, the thermometer attained the month's maximum of 64° at Epsom and Geldeston, 62° was reached at Ventnor and in London, and 61° at Cromer, Cambridge, Berkhamsted, Wisley, Wokingham, Southampton, Tunbridge Wells, and elsewhere. At Eastbourne 60° was registered on the 1st, and at Plymouth, Dungeness, Winslow and Manchester on the 2nd. In Ireland the maxima occurred in the opening days, 59° at Killarney and Valencia, and 58° at Cahir, Clongowes Wood, and Markree Castle on the 2nd. Towards the close of the month many southern districts had three mild days in succession, temperature rising on the 26th to 58° at Bath and Jersey, and 57° at Maidenhead, East Ham, Dungeness, Guernsey and in London, 56° or 55° in numerous other localities. There were a few fairly cold afternoons after the 20th, with maxima below 40° at many stations, 36° at Carnforth, Newton Rigg, Glasgow and Markree Castle on the 25th, and Aspatria on the 30th; 35° at Giggleswick (25th) and Whitworth Park (30th); 34° at Shrewsbury, and 33° at Southport on the 30th. *Lowest values* were registered on different days after the middle of the month, 15° at Balmoral, and 20° at Cally on the 26th; 21° at West Linton (19th and 26th), Garforth (19th), Markree Castle (25th), Strathpeffer (26th), and Marlborough (30th); 22° at Crathes (19th), Newton Rigg (22nd), Clongowes Wood (25th), Laig and Nairn (26th), and Stokesay (30th). On several occasions the night minima were rather high, exceeding 50°, as high as 53° at Southampton on the morning of the 2nd, at Jersey and Swansea on the 3rd, at Portland Bill on the 4th, and at Bognor on the 9th; 55° at Guernsey on the 2nd. *Range* was moderate generally—round 30°—but amounted to 37° at Markree Castle, 38° at Wokingham, 39° at Epsom, and 40° at Geldeston, while it was only 19° at Falmouth and Portland Bill, 18° at Deerness and Guernsey (Brooklyn), and 12° at Scilly. *Vapour Pressure* ranged from 0·203 in. at Strathpeffer and Tillypronie (9 p.m.) to 0·314 in. at Guernsey (9 a.m.), and 0·315 in. at Scilly (6 p.m.). *Relative Humidity* was again rather high, from 81 per cent. at Valencia (6 p.m.) to 96 per cent. at Skegness (7 a.m.). Belvoir Castle (9 a.m.) and Woburn (9 a.m. and 9 p.m.). *Nocturnal Radiation Temperature* (on grass) was frequently below 30°, on 23 nights at Balmoral, 22 at Crathes and Markree Castle, 18 at Maidenhead and Dublin. The lowest readings were 10° at Balmoral (26th), 13° at Crathes (19th), and 14° at Markree Castle (25th). *Mean Earth Temperature* at 1 ft. depth ranged from 42°·1 at Marchmont to 50°·2 at Eastbourne; and at 4 ft. depth from 46°·2 at Cockle Park to 53°·9 at Guernsey.

Rainfall.—The amount of precipitation was less than the average at the majority of stations in all districts, the deficiency being less than 1·5 in. as a rule, but at Folkestone, Fort William and Glencarron it was 1·9 in., and at Valencia 2 ins. Very few places had an excess of more than 0·5 in., but it amounted to 1·1 in. at Sumburgh Head, 1·3 in. at Newquay, and 1·6 in. at Falmouth. Only some dozen stations aggregated 5 ins. or more for the month, Glencarron 7·1 ins., and Laudale 8·5 ins. The smallest totals were in the east, 1·4 in. at Dundee, Seaham and Newcastle, 1·3 in. at Folkestone, and an inch at Leith. Falls of more than an inch in a day were uncommon, but on the 2nd Falmouth had 2·2 ins., on the 12th Glencarron 1·6 in., on the 22nd Gruline (Mull) 2·4 ins., on the 25th Jersey 1·7 in., and on the 27th Gruline 2·3 ins. The number of days on which precipitation was measured was generally about the normal, but at Buxton and Stornoway on 25 days, and at Foynes on 29. On the other hand several neighbourhoods had less than 12 days, Folkestone, Worthing and Tottenham on 10 and Greenwich on 9 days.

Bright Sunshine.—The duration of bright sunshine was irregularly distributed, from an excess of 20 hours at Armagh, Valencia and Fort Augustus to a deficiency of 13 hours at Cambridge, and 22 hours at Scilly. The largest records were 85 hours (33 per cent. of the possible duration) at Valencia and Rousdon, 84 hours (32 per cent.) at Woolacombe, and

80 hours (31 per cent.) at Tenby; the smallest, 19 hours (7 per cent.) at Bunhill Row (London City), and 13 hours (5 per cent.) at Manchester. The morning cloudiness (overcast sky = 10) ranged from 5.0 at Coventry to 9.0 at Hillington; the evening cloudiness from 4.2 at Spurn Head to 8.2 at Scilly and Shields. Fog was reported on 14 days at Berkhamstead and Southampton, 16 at Bennington and Greenwich, and 18 at Kew.

Aurora.—An auroral display was witnessed at Deerness on the 5th and at Aberdeen on the 18th.

DECEMBER, 1907.

General Summary.—Throughout nearly the whole of the closing month of the year the atmospheric conditions over the British Isles were of a very unsettled character, owing, mainly, to the presence of large and as a rule very slow moving disturbances out on the Atlantic, their centres being frequently at a considerable distance from our coasts, apparently beyond the 20th meridian. Exceptionally few centres left the sea for the land. For more than three weeks, down till Christmas, the pressure minima occupied positions well to the northward, between the 50th parallel and Iceland, so that soft ocean breezes largely prevailed over these Islands, the weather was humid, with frequent and sometimes heavy rain, and during the greater part of the time the temperature maintained rather a high level for the time of year, one of the most striking features of the month being the rare occasions on which the thermometer in the screen indicated frost; in London and at several other stations it did not once descend to the freezing point. After Christmas, to the close of the year, entirely different conditions became established. One of the Atlantic disturbances, which was first indicated off the south-west of Iceland, took a south-easterly course and was transferred at a slow rate down to the Bay of Biscay region. The wind consequently shifted to South-East, East and North-East, and being intensely dry, blowing with considerable strength, and drawn from Continental areas of severe frost, the weather assumed an unusually unpleasant character, the wind having the bitter searching feeling associated with the East wind of spring. The temperature records during this period were by no means remarkable, there being hardly any frost at night, but the day maxima were rather low, especially over the southern parts of the Kingdom, where the daily range of temperature was very small.

Although snow was experienced in nearly every part of the Kingdom at various times, and more especially towards the end of the month, the falls were in most places nothing more than light showers. There was a considerable fall locally in Cumberland on the 13th, and in the west of Ireland, County Clare on the 27th. Both at Mount Callan and Labinch the snow, when melted, yielded $\frac{3}{4}$ in. of water. Hail was of rather frequent occurrence in many localities, but the falls were of an unimportant character.

There was a further decided diminution in the records of thunderstorms, or thunder or lightning alone. Thunderstorms visited various parts of Eastern Ireland and the North of England on the 4th; and the English Channel district—Scilly, Guernsey and Jersey—on the 5th. The other thunderstorms were merely isolated instances—Llangammarch Wells on the 8th; Jersey on the 10th; Portland Bill on the 11th; and Markree Castle and Jersey on the 14th.

Fog was much less frequent than in the previous month, having all but disappeared from the coasts. During the 24th there was rather thick fog on the east coast of England, but on the other occasions of its appearance it only visited one or two localities and was of no great density.

For the month as a whole pressure was below its normal level; temperature was nearly everywhere in excess; the winds were from various points in the Southern half of the compass; and the rainfall and the duration of bright sunshine were very irregularly distributed.

Pressure.—*Mean* at 8 a.m. ranged from 29.81 ins. at Jersey and above 29.75 ins. over the south-eastern portion of England to below 29.55 ins. in the north-west of Ireland and of Scotland, 29.51 ins. in the Hebrides. The results were below the average at every station, by from 0.06 in. at Sumburgh Head, 0.11 in. at Aberdeen to 0.26 in. at Blacksod Point, and 0.27 in. at Valencia. The mean gradient was much about the same as the normal, but the distribution of mean pressure was of a more Southerly type than usual, the lowest values being indicated, instead of to the north-westward of Scotland, at a considerable distance beyond the western coasts, probably to the south-westward of Iceland, the mean pressure at Reykjavik being 29.35 ins. *Highest* readings were observed on the 1st, 30.29 ins. at Aberdeen, Shields, Spurn Head and Yarmouth; on the 17th, 30.39 ins. at Clacton-on-Sea, and 30.37 ins. at Dover; on the 24th, 30.39 ins. at Sumburgh Head, and 30.37 ins. at Aberdeen and Shields; and on the 30th, 30.27 ins. at Aberdeen and Sumburgh Head. *Lowest* values were registered on the 5th, 28.34 ins. at Castlebay, 28.35 ins. at Stornoway, 28.43 ins. at Sumburgh Head, and 28.46 ins. at Wick; on the 8th, 28.49 ins. at Castlebay, and 28.52 ins. at Malin Head; and on the 14th, 28.39 ins. at Spurn Head, and 28.52 ins. at Yarmouth. *Range* slightly exceeded an inch over the western portion of the English Channel, and increased thence in all directions,

so that it was more than 1·5 in. at the majority of stations, and both in Shetland and on the coast of Yorkshire it was nearly 2 ins.

Depressions.—Most of the pressure minima of the month were situated out on the Atlantic, too far away from our coasts for their positions to be determined. On the 5th a very deep cyclonic system moved up outside our north-western coasts, and soon disappeared northward between Shetland and the Færøe. Another of equal depth travelled in a north-easterly direction outside our western coasts on the 7th and 8th, and afterwards moved very slowly and in a somewhat erratic path to the neighbourhood of the Faroe, where it appears to have been absorbed during the night of the 12th in a new fall of the barometer shown off the north-west of Scotland. The disturbance then developed considerably, and after moving quickly south-eastwards across Scotland and north-eastern England on the 13th continued on a somewhat more easterly course across Central Europe to Southern Russia. A small depression moved eastward along the south coast of England on the 12th, and another passed north-eastward from the Hebrides to Shetland and beyond on the 22nd and 23rd, but these two systems were marked by rainy, and not windy, weather. The low pressure area which was indicated off the south-western coasts and on the Bay of Biscay during the last week of the month produced a cold Easterly type of conditions, gales in several localities.

Anticyclones.—While very few centres of disturbances visited any part of the British Isles, there was only a single instance of a portion of the country being within the central space of a high pressure system and that occurred on the 30th, when an anticyclone of very moderate intensity passed from the Iceland region across Scotland and the North Sea to the Continent. On the various occasions when the barometer rose to higher levels in these Islands the regions of maximum pressure were found over Germany, Austria or north-eastern Russia.

Winds.—With such a persistent prevalence of low pressure systems out on the Atlantic the winds in all districts were largely from between South and West, but the transfer of the pressure minimum to the southward of the 50th parallel towards the close of the month brought about a change to a more Easterly type, and the results, therefore, show a considerable proportion of South-Easterly and Easterly winds over a great part of the Kingdom. Strong to high winds were commonly experienced, and the force of a gale was reached in numerous places, but the gales were rarely of a severe character. During the first ten days a strong gale was felt only occasionally in isolated situations on the western coasts, the force of a whole gale at Malin Head on the 2nd. The passage of the deep disturbance of the 13th and 14th, however, was marked by a strong North-Westerly to Westerly gale at Roche's Point, Liverpool, Pembroke, Portland Bill, Dungeness, Dover and Oxford, and a whole gale at Jersey. From the 25th to the 28th a strong South-Easterly to Easterly gale was experienced at times in various parts of Ireland and Scotland and at Portland Bill, a whole gale at Malin Head on the 27th, and at Donaghadee on the 28th. The records from the self-registering anemometers disclose few instances of a velocity of 50 miles or more in any one hour. Early on the 14th Scilly had 54 miles in each of two hours, and Southport 53 miles, both from the North-Westward. On the evening of the 27th 50 miles was reached at Pendennis Castle, and at 9 a.m. on the following day 59 miles. The highest rates per hour attained in gusts were 73 miles at Pendennis Castle on the 8th, and at Dover and Southport on the 14th, and 71 miles at Pendennis Castle on the 28th. The number of days on which gale force was recorded at Malin Head was 10, at Jersey 9, and at Deerness, Castlebay, Roche's Point, Pembroke and Portland Bill 7.

Temperature.—*Mean at sea level* ranged from 48°·7 at Scilly, 47°·4 at Guernsey, and above 45° in Cornwall and the Isle of Wight to below 40° in some of the North Midland counties of England, and in most parts of Scotland, about 37° at Crathes and Lairg. The general distribution of the sea-level values was in fair accordance with the normal, but the actual station values were, with some few unimportant exceptions in Wales, Ireland and Scotland, above the average, the excess in many places being more than 2°, amounting to 3° or more at Kew, Portsmouth, Totland Bay, Portland Bill, and Worthing, and over 4° at Eastbourne. *Highest* day records were obtained on very varied dates, but mainly on the 8th in most parts of England—59° at Eastbourne and Epsom (8th), and Salisbury (20th), 58° at Rhyl (4th), Geldeston, Maidenhead and Jersey (8th), Wick (18th), and Totland Bay (19th), 57° at a number of English stations (8th), Shrewsbury (19th), and Guernsey (20th). 56° at Killarney (7th), and Trinity College, Dublin (20th). Until Christmas the afternoon maxima maintained a fairly high level without any noteworthy interruption, but with the advent of the Easterly type of weather there was a decided diminution in the readings, especially over England. Between the 27th and the 31st there were very numerous records of day values as low as 34° and 33°, even along the south coast of England, while a maximum of 32° was registered at Belvoir Castle on the 24th, and Llangammarch Wells and Winslow on the 28th and 30th, and at Edgbaston, Birmingham, on the 28th and 31st. *Lowest* night minima were much more variable in their occurrence than the day maxima, being distributed over nearly the whole month. Readings below 25° were unusually rare, and limited to the more openly situated stations, 10° at Balmoral (30th), 20° at Llangammarch Wells (29th), 22° at Lairg (14th, 29th, 30th), Nairn (30th), 23° at Garforth (24th), and 24° at Birr Castle (1st), Hawarden Bridge, Tealby and Fort William (24th), and Glencarron, (30th). At Scilly the lowest value was as high

as 41° (30th and 31st). On several occasions the nights were very mild and open, with minimum temperatures of 45° and upwards at a very large number of stations, 50° at various English stations on the 8th, 9th and 19th to the 22nd, 51° in many parts of England and Wales on the 18th, 19th and 20th, and 52° at Falmouth on the 19th, and at Bath and Barnstaple on the 20th. *Range* was, in the general absence of severe frost, very small as a rule, less than 25° in a large number of instances, and only a few had 30°, Geldeston, Hereford and Wokingham 31°, Salisbury and Hawarden Bridge 32°, Epsom 33°, and Llangammarch Wells 34°. On the coasts there were several cases of 20° or less, 19° at Clacton-on-Sea, Holyhead and Malin Head, 18° at Sumburgh Head, 16° at Castlebay, 15° at Deerness, and 14° at Scilly. *Vapour Pressure* ranged from 0.178 in. at Tillypronie (9 a.m.) to 0.289 in. at Portland Bill (6 p.m.), and 0.294 in. at Scilly (6 p.m.). *Relative Humidity* ranged from 81 per cent. at Fort William (9 p.m.) and Westminster (6 p.m.) to 96 per cent. at Donaghadee (8 a.m.). *Nocturnal Radiation Temperature* (on grass) was very frequently down to 30° or lower, on 15 or more nights in many localities, 26° at Manchester, and 28° at Balmoral the lowest readings reported being 7° at Balmoral (30th), 11° at Llangammarch Wells (29th), and 16° at Manchester (15th). *Mean Earth Temperature* at 1 ft. depth ranged from 37°·2 at Marchmont to 46°·7 at Guernsey; and at 4 ft. depth from 40°·9 at Crathes to 50°·2 at Guernsey.

Rainfall.—The distribution of precipitation, in the form of rain, hail and snow, was very irregular. Over the northern parts of Scotland and in the Channel Islands the records were below the average, over eastern England and the Metropolitan area they were above, while in other districts they were more variable, but in most cases there was an excess. Buxton and Glencarron return a deficiency of 1.6 in., but many stations had an excess of 2 ins. or more, 2.5 ins. at Valencia, 2.8 ins. at Cardiff, and nearly 3 ins. at Clifton. Aggregate totals for the month exceeding 6 ins. were rather numerous. The smallest totals were nearly all in the east of Britain, 1.5 in. at Margate, 1.6 in. at Nairn, 1.7 in. at Hawarden Bridge, Lincoln and Clacton-on-Sea. Considering the unsettled character of the period falls of an inch or more in a day were by no means numerous. On the 4th there were heavy rainstorms in the south-west of England and the west of Scotland, several stations in both regions receiving more than an inch, Pant-yr-Eos 1.8 in., Kinlochewe, Glencarron and Arlington 1.6 in., and Cardiff, Newport and Newchurch 1.5 in. From the 7th to the 10th there were large falls at various places in the west and north. On the 13th rather more than an inch was measured at several stations in Scotland, also in Cumberland and Central Wales. The north-west of England was visited on the 19th with falls up to 1.8 in. at Kirkby Lonsdale, and at Aspatria 2.5 ins. in 30 hours. Next day there were further large falls in the same neighbourhood and in the south of Scotland. Heavy rain and snow visited Ireland on the 26th and 27th, on the former date 1.8 in. at Lickeen and 1.6 in. at Valencia, and on the latter date 1.6 in. at Roche's Point and 1.4 in. at Ballinacurra. Precipitation was measured on 30 days at Foynes and Scilly, on 29 at Falmouth, Belfast, Roche's Point, Valencia, Lickeen and Carrigallen; and on 27 or 28 in numbers of other places, while at several stations in south-eastern England and at Dunrobin only on 14 days, and at Kew, Wisley and Margate on 13.

Bright Sunshine.—South-eastern England and the London district had an appreciable excess of bright sunshine; the east and west of Scotland, the north-east, midland, and south-west of England and the south of Ireland returned a deficiency, and the rest of the country had very variable records. Westminster had practically double its usual duration of sunshine, whereas Newcastle-on-Tyne had only one-third, and Glasgow one-fifth of the average. The largest totals for the month were 68 hours (28 per cent. of the possible duration) at Hastings, 65 hours (27 per cent.) at Ramsgate, 64 hours (27 per cent.) at Dover, and 63 hours (26 per cent.) at Folkestone, and 62 hours (26 per cent.) at Broadstairs, Tunbridge Wells and Worthing; the smallest aggregates 9 hours at Balta Sound (5 per cent.) and Newcastle-on-Tyne (4 per cent.), 7 hours (3 per cent.) at Garforth, 3 hours (1 per cent.) at Glasgow, and 2 hours (1 per cent.) at Hull and Manchester (City). Tunbridge Wells had an excess of 20 hours, and Falmouth a deficiency of 19 hours. Morning cloudiness (overcast sky = 10) ranged from 5.5 at Balmoral to 9.4 at Prestwich, Manchester; and the evening cloudiness from 4.2 at Lairg to 9.2 at Dundee. The days on which fog occurred numbered 7 at Berkhamsted, 8 at Crieff, York and Bennington, 9 at Dundee, and 11 at Southampton.

Aurora.—An aurora was observed at Belvoir Castle on the 2nd, and at Deerness and Aberdeen on the 11th.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

*Prepared in the Meteorological Office under the direction of
W. N. Shaw, LL.D., Sc.D., F.R.S.*

In compiling the following Tables (pp. 82 to 91) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 13.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are included in the Tables. The wind observations at Falmouth and Kew are based on the records of a standard Robinson anemometer (factor 2.2). At Southport the equivalent values are obtained from a Dines Pressure Tube Anemometer. Velocities of between 13 and 38 miles in the hour have been entered in the Tables as strong winds, velocities of 39 miles in the hour, or above, as gales. At the remaining stations the wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking the results.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		3. ENGLAND, S:—	
Greenwich ..	The Royal Observatory.	Southampton .	A. Vaughan, for Director General of Ordnance Survey.
Kew	The Kew Observatory (National Physical Observatory).	Portsmouth ..	A. Mearns Fraser, M.D., M.O.H., for the Corporation.
Barnet	T. H. Martin, A.M.I.C.E.	Brighton ..	A. Newsholme, M.D., M.O.H., for the Corporation.
Tottenham ..	J. F. Butler-Hogan, M.D., LL.B., for Urban District Council.	Ventnor ..	Miss Gibson, for Royal National Hospital for Consumption.
Camden Square	H. Robert Mill, LL.D., D.Sc.	Portland Bill ..	The Meteorological Office.
Westminster ..	The Meteorological Office.	Eastbourne ..	S. R. Henderson, for the Corporation.
Norwood ..	W. Marriott.	Salisbury ..	Thos. Challis, for the Earl of Pembroke.
2. ENGLAND, CENTRAL:—		4. ENGLAND, E:—	
Huddersfield	J. Firth.	Cromer ..	W. H. Archer, for Urban District Council.
Sheffield ..	E. Howarth. The Weston Park Museum.	Clacton-on-Sea	A. W. Shadick, for Urban District Council.
Nottingham ..	Arthur Brown, M.Inst.C.E., and Philip Boobyer, M.D., M.O.H., for the Corporation.	Dunmow ..	Thos. Hacking. The Countess of Warwick's Agricultural School.
Wakefield ..	A. French, M.R.C.S., L.R.C.P.	Cambridge ..	R. Irwin Lynch, M.A. The Botanic Gardens.
Birmingham ..	A. Cresswell, for the Midland Institute Observatory.	Norwich ..	A. W. Preston.
Coventry ..	E. Hugh Snell, M.D., M.O.H., for the Corporation.	Bennington ..	Rev. J. D. Parker, LL.D.
Buxton	W. Pilkington.	Hillington ..	Rev. H. E. B. Ffolkes, M.A.
Cheltenham ..	A. C. Saxby, for the Corporation.		
Oxford	The Radcliffe Observatory.		
Shrewsbury ..	Capt. W. E. Manser, R.E.		
Stokesay ..	Rev. W. La Touche, B.A.		
Berkhamsted	E. Mawley.		
Belvoir Castle	W. H. Divers, for the Duke of Rutland, K.G.		

Station.	Observer.	Station.	Observer.
5. ENGLAND, N.E.:—		7. ENGLAND, S.W., WITH SOUTH WALES:—	
North Shields	The Meteorological Office.	Plymouth ..	H. Victor Prigg, A.M.I.C.E., for the Corporation.
Spurn Head ..	The Meteorological Office.	Woolacombe ..	B. Fanshawe.
Durham ..	Prof. R. A. Sampson, M.A., F.R.S.	St. Ann's Head, Pembroke.	The Meteorological Office.
York	Oxley Grabham, M.A., for Yorkshire Phil. Soc.	Bristol	D. Rintoul, M.A. Clifton College.
Hull	H. B. Witty, for the Cor- poration.	Falmouth ..	The Meteorological Office.
Lincoln ..	S. R. Moss, for the Cor- poration.	Bath	W. H. Symons, M.D., M.O.H., for the Corporation.
Cockle Park .. (near Morpeth).	T. B. Hewetson, for the Northumberland County Council.	Llangammarch Wells.	W. Black Jones, M.D.
6. ENGLAND, N.W., WITH NORTH WALES:—		8. THE CHANNEL:—	
Llandudno ..	W. Little, for the Town Council.	Scilly	The Meteorological Office.
Bettws-y-coed	Dr. H. W. Fox, for District Council.	Jersey	The Meteorological Office.
Liverpool .. (Bidston.)	W. E. Plummer, M.A. Bid- ston Observatory.	Guernsey ..	Adolphus Collenette.
Aspatria ..	J. Smith Hill, B.Sc. The Agricultural College.		
Manchester ..	J. Niven, M.A., M.B., M.O.H., for the Corporation.		
Southport ..	J. Baxendell, for the Cor- poration.		
Stonyhurst ..	Rev. W. Sidgreaves, S.J. The Observatory.		

DAYS OF "CLEAR SKY" AND "OVERCAST."

A day is reckoned as a day of "clear sky" if the average of the estimates of the fraction of sky covered by cloud at the two hours of observation is less than .2, and as an "overcast" day if the average is greater than .8. At the Royal Observatory, Greenwich, records are kept of days persistently cloudless and days persistently overcast from midnight to midnight. The numbers of such days for the current quarter are:—Clear sky, 0, 0, 0; and Overcast, 0, 1, 2.

Oxford:—The observing hours at Oxford (the Radcliffe Observatory) are 8 a.m., noon and 8 p.m. The results given under Barometer and Hygrometer are the means of the observations at these hours reduced to the means for 9 a.m. and 9 p.m. by corrections deduced from a discussion of the Photographic Continuous Records. (See *Radcliffe Observations*, Vols. XXXIX. to XLV.) The averages used at Oxford are based on observations as follows: Rain, 91 years, 1815–1905; Temperature, 78 years, 1828–1905; Sunshine, 25 years, 1881–1905.

At Greenwich and Oxford the daily rainfall amounts are those for the 24 hours comprising the civil day. At other stations the amounts are those for the 24 hours ending at the time of morning observation; they are entered to the day preceding that of observation.

* At Oxford the observations are taken at 8 a.m., noon, and 8 p.m., see Note on page 81. At all the other stations the hour of observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked:—

For all the stations marked a, b, and c, the results under Barometer, Hygrometer and Cloud are based on the morning for districts. For the station marked c, the results for Wind Direction and Number of Observations of Moderate and strong winds. They, as well as the number of days of "Clear Sky" and "Overcast" at this station, are printed in French.

† The averages used are obtained from observations extending over 35 years, namely:—For Rainfall, 35 years, 1871-1905; at Belvoir Castle the earth temperature is taken at 3 feet below the surface.

‡ See Footnote p. 81.

{ a. (St. Ann's Head, Bath, Scilly and Jersey) the observing hours are 8 a.m. and 6 p.m. Greenwich time.
 { c. (Langammarch Wells) the observing hour is 9 a.m. local time.
 observations only, and these results are in consequence printed in French type. They have not been included in the means
 wind have been multiplied by 2 in order to make them more readily comparable with the results for other stations.
 are included in the means for districts.
 Temperature, 35 years, 1871-1905; Sunshine, 25 years, 1881-1905.

the number of observations of calm and the number of days of gale are given in the table.

[illegible]

INDEX OF URBAN DISTRICTS

As existing on 31st December, 1907, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked † have been altered since the Census of 1901. The exact constitution of each Urban District and of each Registration Sub-district at the time of the last Census is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,168 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 146 were each co-extensive, at the end of December, 1907, with one or more Registration Areas.
